Report on World Water Day Celebration, 2023

Objective: Accelerating the change to solve the water and sanitation crisis,'

NSS Cell-MITS took initiation in organizing “World Water Day camp”. March 22nd 2023 50 student Volunteers and faculty members were participated.

Every year we celebrate the ‘World Water Day’. This year also we have dedicated this day to water. Our Institution celebrated the day with utmost sincerity. Water is the most precious resource for arrival. But nowadays, the scarcity of water is really a threat to the whole world. This year our school selected the theme ‘Do not waste Water’. The aim of the programme was too aware the students about the water crisis around the world. Surveys reveal that 80% of all waste water is not reused. If water were reused, the shortage of water could be reduced to some extent. First the programme started with an opening song sung by the students. Our respected teachers delivered valuable speeches on the importance of water and the scarcity of water.

- One of the ways in which water is wasted the most is leakage. Leaking taps alone lead to the wastage of around 5,500 Liters of water every year. Leakage from toilet flushes, often unnoticed, is another major source of wastage. Some students staged a drama displaying our future condition due to lack of water. Our teachers warned us that we in India bathe many times a day, especially in the summer months. If we are careful in using water, we can reduce wastage. Our headmaster also made us aware how to use taps before and after mid-day-meal. With a little care in our daily lives, water can be saved. This in turn, will save the earth. Otherwise, we are to be ready for more fatal situation.
