DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING (DATA SCIENCE)

Course Structure

&

Detailed Syllabi

For the students admitted to

B. Tech. Regular Four Year Degree Programme from the Academic Year 2023-24

and

B. Tech. Lateral Entry Scheme from the Academic Year 2024-25

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING (DATA SCIENCE)

Vision and Mission of the Institution

Vision	To become a globally recognized research and academic institution and thereby contribute to technological and socio-economic development of the nation
Mission	To foster a culture of excellence in research, innovation, entrepreneurship, rational thinking and civility by providing necessary resources for generation, dissemination and utilization of knowledge and in the process create an ambience for practice-based learning to the youth for success in their careers.

Vision and Mission of the Department

Vision	To become recognized data science center, emphasizing academic excellence, pioneering research, and data driven solutions, contributing significantly to global technological advancement and socio-economic development..
Mission	➤ To foster a culture that empowers students with state-of-the-art laboratories and learned faculty to compete in the data driven world. ➤ To provide a dynamic atmosphere for data-driven exploration in collaboration with global industry and research organization, encouraging innovation and entrepreneurship. ➤ To nurture professional ethics, inter-disciplinary and practice-based learning among students to serve the society.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Apply advanced skills in data analysis, utilizing cutting edge tools and techniques in higher studies, and excel in diverse professional settings.

PEO2: Demonstrate a strong aptitude for innovation and entrepreneurship, by creating novel solutions and contributing to industry and society.

PEO3: Collaborate with a culture of ethical and interdisciplinary thinking and address complex challenges.

PROGRAM OUTCOMES (POs)

At the end of the programme, graduate will be able to

PO1: Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization for the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norm of the engineering practice.

PO9: Individual and teamwork: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with t h e society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

PSO1: Demonstrate in statistical analysis, machine learning, and visualization, extracting insights from complex datasets.

PSO2: Apply data-driven approaches to solve intricate problems, communicate findings, and drive strategic outcomes.

PSO3: Develop and apply advanced data modeling techniques to make accurate predictions, including predictive analytics and forecasting.

THREE WEEK MANDATORY INDUCTION PROGRAMME

- Yoga and Meditation
- Sports and Games
- NSS
- NCC
- MITS Social Responsibility Club
- Management module
- Design Thinking
- Spoken and Written Communication

➤ *Proficiency modules*

- Basic Computer Proficiency
- Interpersonal skills
- Computer Graphics
- Web programming
- Mobile Apps
- Vocabulary enhancement

HOLISTIC DEVELOPMENT ACTIVITIES

Description of Activities

1. Physical and Health
2. Culture
3. Literature and Media
4. Social Service
5. Self-Development
6. Nature and Environment
7. Innovation

ANNEXURE - II

DESIGN THINKING AND INNOVATION RELATED COURSES (To be offered under MOOC's Category from SWAYAM – NPTEL)		
Sl. No.	Course Code	Course Title
1	23IIC5M01	Design, Technology and Innovation
2	23IIC5M02	Introduction on Intellectual Property to Engineers and Technologists
3	23IIC5M03	Product Engineering and Design Thinking
4	23IIC5M04	Intellectual Property Rights and Competition Law
5	23IIC5M05	Innovation, Business Models and Entrepreneurship
6	23IIC5M06	Understanding Incubation and Entrepreneurship
7	23IIC5M07	Intellectual Property
8	23IIC5M08	Roadmap for Patent Creation
Any new Innovation and Incubation Course offered by SWAYAM NPTEL can be appended in future.		

OPEN ELECTIVE – I (To be offered under Conventional Mode)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	23HUM301	Indian Knowledge System	Humanities
2	23MAT301	Advanced Numerical Methods	Mathematics
3	23MAT302	Engineering Optimization	Mathematics
4	23PHY301	LASER Physics and Advanced LASER Technology	Physics
5	23PHY302	Thin Film Technology and its Applications	Physics
6	23PHY303	Waste To Sustainable Energy and Energy Systems	Physics
7	23CHE301	Chemistry of Polymers and its Applications	Chemistry
8	23CHE302	Green Chemistry and Catalysis for Sustainable Environment	Chemistry
9	23CHE303	Chemistry of Energy Systems	Chemistry
10	23CE301	Disaster Management	Civil
11	23CE302	Green Buildings	Civil
12	23ME301	Materials Science for Engineers	Mechanical
13	23ME302	Sustainable Energy Technologies	Mechanical
14	23EEE301	Electrical Safety Practices and Standards	EEE
15	23EEE302	Introduction to MEMS	EEE
16	23ECE301	Bio-Medical Electronics	ECE
17	23ECE302	VLSI Design	ECE
Any new Interdisciplinary Course can be appended in future.			

OPEN ELECTIVE – II (To be offered under MOOC's Category from SWAYAM – NPTEL)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	23HUM3M01	English Language for Competitive Exams	Humanities and Social Sciences
2	23HUM3M02	Public Speaking	Humanities and Social Sciences
3	23HUM3M03	Indian Business History	Humanities and Social Sciences
4	23HUM3M04	Indian Economy: Some Contemporary Perspectives	Humanities and Social Sciences
5	23MG3M01	E – Business	Management
6	23MG3M02	AI in Human Resource Management	Management
7	23MG3M03	AI in Marketing	Management
8	23MG3M04	Artificial Intelligence for Investments	Management
9	23CE3M01	Plastic Waste Management	Civil
10	23CE3M02	Safety in Construction	Civil
11	23ME3M01	Operations Management	Mechanical
12	23EEE3M01	Transducers For Instrumentation	EEE
13	23ECE3M01	Microprocessors and Interfacing	ECE
14	23ECE3M02	Microprocessors and Microcontrollers	ECE
15	23MD3M01	Research Methodology	Multidisciplinary
Any new Interdisciplinary Course offered by SWAYAM NPTEL can be appended in future.			

OPEN ELECTIVE – III			
(To be offered under MOOC's Category from SWAYAM – NPTEL)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	23HUM3M05	Indian Society: Sociological Perspectives	Humanities and Social Sciences
2	23MAT3M01	Foundations of R Software	Mathematics
3	23MAT3M02	Foundations of R Software (in Hindi Language)	Mathematics
4	23MG3M05	HR Analytics	Management
5	23MG3M06	Management Information System	Management
6	23MG3M07	Business Analytics & Text Mining Modeling using Python	Management
7	23CE3M03	Building Materials and Composites	Civil
8	23ME3M02	Power Plant Engineering	Mechanical
9	23EEE3M02	Design of Photovoltaic Systems	EEE
10	23ECE3M03	System Design Through Verilog	ECE
11	23MD3M03	Learning Analytics Tools	Multidisciplinary
Any new Interdisciplinary Course offered by SWAYAM NPTEL can be appended in future.			

OPEN ELECTIVE – IV (To be offered under Conventional Mode)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	23PHY304	Smart Materials and Devices	Physics
2	23CHE304	Introduction to Nano Science and Technology	Chemistry
3	23CHE305	Water Pollution and its Management	Chemistry
4	23CE303	Environmental Impact Assessment	Civil
5	23CE304	Building Technology	Civil
6	23CE305	Sustainability in Engineering Practices	Civil
7	23ME303	Total Quality Management	Mechanical
8	23ME304	Additive Manufacturing	Mechanical
9	23ME305	Refrigeration and Air Conditioning	Mechanical
10	23EEE303	Robotics	EEE
11	23EEE304	Smart Grid Technologies	EEE
12	23ECE303	Embedded Systems	ECE
13	23ECE304	Community Radio Technology	ECE
Any new Interdisciplinary Course can be appended in future.			

List of Professional Elective

Professional Elective – I (To be offered under MOOC's Category from SWAYAM – NPTEL)		
Sl. No.	Course Code	Course Title
1.	23CSD4M01	Operating System Fundamentals
2.	23CSD4M02	Introduction to Internet of Things
3.	23CSD4M03	Introduction to Soft Computing
4.	23CSD4M04	Introduction to Operating Systems
5.	23CSD4M05	Fundamentals of Artificial Intelligence
Any other new Disciplinary Course which doesn't exist in the Curriculum can be appended in future.		

Professional Elective – II		
Sl. No.	Course Code	Course Title
1.	23CSD401	Social Network Analysis
2.	23CSD402	Computer Networks and Internet Protocol
3.	23CSD403	Recommender Systems
4.	23CSD404	Natural Language Processing
Any advanced courses can be appended in future.		

Professional Elective – III		
Sl. No.	Course Code	Course Title
1.	23CSD405	Software Project Management
2.	23CSD406	Computer Vision
3.	23CSD407	Cloud Computing
Any advanced courses can be appended in future.		

Professional Elective – IV		
Sl. No.	Course Code	Course Title
1.	23CSD408	Software Architecture and Design Pattern
2.	23CSD409	Blockchain Technology
3.	23CSD410	NoSQL Databases
4.	23CSD411	Data Warehousing and Data Mining
Any advanced courses can be appended in future.		

Professional Elective –V		
Sl. No.	Course Code	Course Title
1	23CSD412	Agile Methodologies
2	23CSD413	Expert Systems
3	23CSD414	Reinforcement Learning
4	23CSD415	High Performance Computing
Any advanced courses can be appended in future.		

ANNEXURE - V

MANAGEMENT COURSE		
Sl. No.	Course Code	Course Title
1	23HUM801	Business Ethics and Corporate Governance
2	23HUM802	Principles of Management
3	23HUM803	Human Resource Development
4	23HUM804	Management Science
5	23HUM805	National Cadet Corps

List of Skill Enhancement Courses

Skill Enhancement Course – I		
Sl. No.	Course Code	Course Title
1.	23CSD601	Python programming
Any Courses can be appended in future.		

Skill Enhancement Course – II		
Sl. No.	Course Code	Course Title
1.	23CSD602	Exploratory Data Analysis with Python
2.	23CSD603	DevOps
Any Courses can be appended in future.		

Skill Enhancement Course – III		
Sl. No.	Course Code	Course Title
1.	23CSD604	Full Stack Development
2.	23CSD605	MLOps
Any Courses can be appended in future.		

Skill Enhancement Course – IV		
Sl. No.	Course Code	Course Title
1.	23ENG601	Soft Skills
Any Courses can be appended in future.		

Skill Enhancement Course – V		
Sl. No.	Course Code	Course Title
1.	23CSD606	Generative AI
Any Courses can be appended in future.

I Year I Semester

B. Tech I Year I Semester

23ENG101 COMMUNICATIVE ENGLISH

L T P C
2 0 0 2

Pre-requisite: None

Course Objectives:

The main objective of introducing this course, Communicative English, is to facilitate effective listening, Reading, Speaking and Writing skills among the students. It enhances the same in their comprehending abilities, oral presentations, reporting useful information and providing knowledge of grammatical structures and vocabulary. This course helps the students to make them effective in speaking and writing skills and to make them industry ready.

UNIT I Lesson: HUMAN VALUES: Gift of Magi (Short Story) 6 hours

- Listening:** Identifying the topic, the context and specific pieces of information by listening to short audio texts and answering a series of questions.
- Speaking:** Asking and answering general questions on familiar topics such as home, family, work, studies and interests; introducing oneself and others.
- Reading:** Skimming to get the main idea of a text; scanning to look for specific pieces of information.
- Writing:** Mechanics of Writing-Capitalization, Spellings, Punctuation-Parts of Sentences.
- Grammar:** Parts of Speech, Basic Sentence Structures-forming questions
- Vocabulary:** Synonyms, Antonyms, Affixes (Prefixes/Suffixes), Root words.

UNIT II Lesson: NATURE: The Brook by Alfred Tennyson (Poem) 6 hours

- Listening:** Answering a series of questions about main ideas and supporting ideas after listening to audio texts.
- Speaking:** Discussion in pairs/small groups on specific topics followed by short structure talks.
- Reading:** Identifying sequence of ideas; recognizing verbal techniques that help to link the ideas in a paragraph together.
- Writing:** Structure of a paragraph - Paragraph writing (specific topics)
- Grammar:** Cohesive devices - linkers, use of articles and zero article; prepositions.
- Vocabulary:** Homonyms, Homophones, Homographs.

UNIT III Lesson: BIOGRAPHY: Elon Musk 6 hours

- Listening:** Listening for global comprehension and summarizing what is listened to.
- Speaking:** Discussing specific topics in pairs or small groups and reporting what is discussed
- Reading:** Reading a text in detail by making basic inferences - recognizing and interpreting specific context clues; strategies to use text clues for comprehension.
- Writing:** Summarizing, Note-making, paraphrasing
- Grammar:** Verbs - tenses; subject-verb agreement; Compound words, Collocations
- Vocabulary:** Compound words, Collocations

UNIT IV Lesson: INSPIRATION: The Toys of Peace by Saki 6 hours

Listening: Making predictions while listening to conversations/ transactional dialogues without video; listening with video.

Speaking: Role plays for practice of conversational English in academic contexts (formal and informal) - asking for and giving information/directions.

Reading: Studying the use of graphic elements in texts to convey information, reveal trends/patterns/relationships, communicate processes or display complicated data.

Writing: Letter Writing: Official Letters, Resumes

Grammar: Reporting verbs, Direct & Indirect speech, Active & Passive Voice

Vocabulary: Words often confused, Jargons

UNIT V Lesson: MOTIVATION: The Power of Intrapersonal Communication (An Essay) 6 hours

Listening: Identifying key terms, understanding concepts and answering a series of relevant questions that test comprehension.

Speaking: Formal oral presentations on topics from academic contexts

Reading: Reading comprehension.

Writing: Writing structured essays on specific topics.

Grammar: Editing short texts –identifying and correcting common errors in grammar and usage (articles, prepositions, tenses, subject verb agreement)

Vocabulary: Technical Jargons

Course Outcomes:

CO1: Understand the topic, context, and pieces of specific information from personal , professional and social situations

CO2: Apply discourse markers to speak clearly in formal discussions

CO3: Analyze and apply grammatical structures to formulate contextualized phrases and sentences

CO4: Analyze texts and images to write summaries based on global comprehension

CO5: Draft coherent paragraphs and structured essays

Textbooks:

1. Pathfinder: Communicative English for Undergraduate Students, 1st Edition, Orient Black Swan, 2023 (Units 1,2 & 3)
2. Empowering with Language by Cengage Publications, 2023 (Units 4 & 5)

Reference Books:

1. Dubey, Sham Ji & Co. English for Engineers, Vikas Publishers, 2020
2. Bailey, Stephen. Academic writing: A Handbook for International Students. Routledge, 2014.
3. Murphy, Raymond. English Grammar in Use, Fourth Edition, Cambridge University Press, 2019.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year I Semester

23MAT101 LINEAR ALGEBRA AND CALCULUS

L	T	P	C
3	0	0	3

Course Objectives:

To equip the students with standard concepts and tools at an intermediate to advanced level mathematics to develop the confidence and ability among the students to handle various real-world problems and their applications.

UNIT I MATRICES

9 hours

Rank of a matrix by echelon form, normal form. Cauchy–Binet formulae (without proof). Inverse of non-singular matrices by Gauss-Jordan method, System of linear equations: Solving system of Homogeneous and Non-Homogeneous equations by Gauss elimination method, Jacobi and Gauss Seidel Iteration Methods.

UNIT II EIGENVALUES, EIGENVECTORS AND ORTHOGONAL TRANSFORMATION

9 hours

Eigenvalues, Eigenvectors and their properties, Diagonalization of a matrix, Cayley-Hamilton Theorem (without proof), finding inverse and power of a matrix by Cayley-Hamilton Theorem, Quadratic forms and Nature of the Quadratic Forms, Reduction of Quadratic form to canonical forms by Orthogonal Transformation.

UNIT III CALCULUS

9 hours

Mean Value Theorems: Rolle's Theorem, Lagrange's mean value theorem with their geometrical interpretation, Cauchy's mean value theorem, Taylor's and Maclaurin theorems with remainders (without proof), Problems and applications on the above theorems.

UNIT IV PARTIAL DIFFERENTIATION AND APPLICATIONS (MULTI VARIABLE CALCULUS)

9 hours

Functions of several variables: Continuity and Differentiability, Partial derivatives, total derivatives, chain rule, Taylor's and Maclaurin's series expansion of functions of two variables. Jacobians, Functional dependence, maxima and minima of functions of two variables, method of Lagrange multipliers.

UNIT V MULTIPLE INTEGRALS (MULTI VARIABLE CALCULUS)

9 hours

Double integrals, triple integrals, change of order of integration, change of variables to polar, cylindrical and spherical coordinates. Finding areas (by double integrals) and volumes (by double integrals and triple integrals).

Course Outcomes:

At the end of the course, the student will be able to

CO1: Solve the system of linear equations and apply the matrix algebra techniques in practical applications.

CO2: Utilize the Eigenvalues, Eigenvectors and applications of diagonalization in the field of Science and Technology.

CO3: Relate the results of mean value theorems in real life problems.

CO4: Apply the functions of several variables to evaluate the rates of change with respect to time and space variables in engineering.

CO5: Compute the area and volume by interlinking them to appropriate double and triple integrals.

Textbooks:

1. Higher Engineering Mathematics, B. S. Grewal, Khanna Publishers, 2017, 44th Edition
2. Advanced Engineering Mathematics, Erwin Kreyszig, John Wiley & Sons, 2018, 10th Edition.

Reference Books:

1. Thomas Calculus, George B. Thomas, Maurice D. Weir and Joel Hass, Pearson Publishers, 2018, 14th Edition.
2. Advanced Engineering Mathematics, R. K. Jain and S. R. K. Iyengar, AlphaScience International Ltd., 2021 5th Edition(9th reprint).
3. Advanced Modern Engineering Mathematics, Glyn James, Pearson publishers, 2018, 5th Edition.
4. Advanced Engineering Mathematics, Micheael Greenberg, Pearson publishers, 9th edition
5. Higher Engineering Mathematics, H. K Das, Er. Rajnish Verma, S. Chand Publications, 2014, Third Edition (Reprint 2021)

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year I Semester

23CHE102 CHEMISTRY

L	T	P	C
3	0	0	3

Course Objectives:

- To familiarize engineering chemistry and its applications
- To train the students on the principles and applications of electrochemistry and polymers
- To introduce instrumental methods, molecular machines and switches.

UNIT I STRUCTURE AND BONDING MODELS

9 hours

Fundamentals of Quantum mechanics, Schrodinger Wave equation, significance of Ψ and Ψ^2 , particle in one dimensional box, molecular orbital theory – bonding in homo- and heteronuclear diatomic molecules – energy level diagrams of N_2 , O_2 and NO , CO π -molecular orbitals of butadiene and benzene, calculation of bond order.

UNIT II MODERN ENGINEERING MATERIALS

9 hours

Semiconductors – Introduction, basic concept, role of doping agents, applications

Super conductors -Introduction, basic concept, applications.

Supercapacitors: Introduction, Basic Concept-Classification – Applications.

Nano materials: Introduction, classification, properties and applications of Fullerenes, carbon nano tubes and Graphene nanoparticles.

UNIT III ELECTROCHEMISTRY AND APPLICATIONS

9 hours

Electrochemical cell, Nernst equation, cell potential calculations and numerical problems, potentiometry- potentiometric titrations (redox titrations), concept of conductivity, conductivity cell, conductometric titrations (acid-base titrations).

Electrochemical sensors – potentiometric sensors with examples, amperometric sensors with examples.

Primary cells – Zinc-air battery, Sodium-air battery, Secondary cells –lithium-ion batteries- working of the batteries including cell reactions; Fuel cells, hydrogen-oxygen fuel cell– working of the cells.

Polymer Electrolyte Membrane Fuel cells (PEMFC).

UNIT IV POLYMER CHEMISTRY

9 hours

Introduction to polymers, functionality of monomers, chain growth and step growth polymerization, coordination polymerization, with specific examples and mechanisms of polymer formation, Poly Dispersity Index (PDI) & it's significance

Plastics –Thermo and Thermosetting plastics, Preparation, properties and applications of – PVC, Teflon, Bakelite, Nylon-6,6, carbon fibres.

Elastomers–Buna-S, Buna-N–preparation, properties and applications.

Conducting polymers – polyacetylene, polyaniline, – mechanism of conduction and applications.

Bio-Degradable polymers - Poly Glycolic Acid (PGA), Poly Lactic Acid (PLA).

UNIT V INSTRUMENTAL METHODS AND APPLICATIONS

9 hours

Electromagnetic spectrum. Absorption of radiation: Beer-Lambert's law. UV-Visible Spectroscopy, electronic transition, Instrumentation, IR spectroscopy, fundamental modes and selection rules, Instrumentation. Chromatography-Basic Principle, Classification-HPLC: Principle, Instrumentation and Applications.

Course Outcomes:

At the end of the course, the students will be able to:

- CO1: Explain the foundations of Quantum mechanics and concept of bonding in homo and hetero diatomic molecules like O₂, CO etc.
- CO2: Apply the principle of Band diagrams in the application of conductors and semiconductors. Properties and applications of nanomaterials.
- CO3: Compare the materials of construction for battery, its working principles, fuel cells & electrochemical sensors.
- CO4: Explain the preparation, properties, and applications of thermoplastics & thermosetting & elastomers conducting polymers.
- CO5: Explain the principles of spectrometry, technique of HPLC in separation of solid and liquid mixtures. Summarize the concepts of Instrumental methods.

Textbooks:

- 1. Jain and Jain, Engineering Chemistry, 16/e, DhanpatRai, 2013.
- 2. Peter Atkins, Julio de Paula and James Keeler, Atkins' Physical Chemistry, 10/e, Oxford University Press, 2010.
- 3. G V Subba Reddy, K N Jayaveera, C Ramachandraiah, Engineering Chemistry, McGraw-Hill; First Edition, 2019.

Reference Books:

- 1. Skoog and West, Principles of Instrumental Analysis, 6/e, Thomson, 2007.
- 2. J.D. Lee, Concise Inorganic Chemistry, 5th Edition, Wiley Publications, Feb.2008
- 3. Textbook of Polymer Science, Fred W. Billmayer Jr, 3rd Edition

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year I Semester

23CME101 BASIC CIVIL AND MECHANICAL ENGINEERING

L	T	P	C
3	0	0	3

Course Objectives:

- Get familiarized with the scope and importance of Civil Engineering sub-divisions.
- Introduce the preliminary concepts of surveying.
- Acquire preliminary knowledge on Transportation and its importance in nation's economy.
- Get familiarized with the importance of quality, conveyance and storage of water.
- Introduction to basic civil engineering materials and construction techniques.

PART A: BASIC CIVIL ENGINEERING

UNIT I BASICS OF CIVIL ENGINEERING

8 hours

Role of Civil Engineers in Society- Various Disciplines of Civil Engineering- Structural Engineering- Geo-technical Engineering- Transportation Engineering - Hydraulics and Water Resources Engineering - Environmental Engineering-Scope of each discipline - Building Construction and Planning- Construction Materials-Cement - Aggregate - Bricks- Cement concrete- Steel. Introduction to Prefabricated construction Techniques.

UNIT II SURVEYING

8 hours

Objectives of Surveying- Horizontal Measurements- Angular Measurements- Introduction to Bearings Levelling instruments used for levelling -Simple problems on levelling and bearings-Contour mapping.

UNIT III TRANSPORTATION ENGINEERING

8 hours

Importance of Transportation in Nation's economic development- Types of Highway Pavements- Flexible Pavements and Rigid Pavements - Simple Differences. Basics of Harbour, Tunnel, Airport, and Railway Engineering.

Water Resources and Environmental Engineering: Introduction, Sources of water- Quality of water- Specifications- Introduction to Hydrology-Rainwater Harvesting-Water Storage and Conveyance Structures (Simple introduction to Dams and Reservoirs).

Course Outcomes:

- CO1: Identify various sub-divisions of Civil Engineering and to appreciate their role in ensuring better society.
- CO2: Measure of distances, angles and levels through surveying.
- CO3: Identify various transportation infrastructures, sources of water and various water conveyance, storage structures like dams and reservoirs.

Textbooks:

1. Basic Civil Engineering, M.S.Palanisamy, , Tata Mcgraw Hill publications (India) Pvt.Ltd. Fourth Edition.
2. Introduction to Civil Engineering, S.S. Bhavikatti, New Age International Publishers.2022. First Edition.
3. Basic Civil Engineering, Satheesh Gopi, Pearson Publications, 2009, First Edition.

Reference Books:

1. Surveying, Vol- I and Vol-II, S.K. Duggal, Tata McGraw Hill Publishers 2019. Fifth Edition.
2. Hydrology and Water Resources Engineering, Santosh Kumar Garg, Khanna Publishers, Delhi. 2016
3. Irrigation Engineering and Hydraulic Structures - Santosh Kumar Garg, Khanna Publishers, Delhi 2023. 38th Edition.
4. Highway Engineering, S.K.Khanna, C.E.G. Justo and Veeraraghavan, Nemchand and Brothers Publications 2019. 10th Edition.
5. Indian Standard DRINKING WATER — SPECIFICATION IS 10500-2012.

PART B: BASIC MECHANICAL ENGINEERING

Course Objectives:

The students after completing the course are expected to

- Get familiarized with the scope and importance of Mechanical Engineering in different sectors and industries.
- Explain different engineering materials and different manufacturing processes.
- Provide an overview of different thermal and mechanical transmission systems and introduce basics of robotics and its applications.

UNIT I

8 hours

Introduction to Mechanical Engineering: Role of Mechanical Engineering in Industries and Society- Technologies in different sectors such as Energy, Manufacturing, Automotive, Aerospace, and Marine sectors.

Engineering Materials - Metals-Ferrous and Non-ferrous, Ceramics, Composites, Smart materials.

UNIT II

8 hours

Manufacturing Processes: Principles of Casting, Forming, joining processes, Machining, Introduction to CNC machines, 3D printing, and Smart manufacturing.

Thermal Engineering – working principle of Boilers, Otto cycle, Diesel cycle, Refrigeration and air-conditioning cycles, IC engines, 2-Stroke and 4-Stroke engines, SI/CI Engines, Components of Electric and Hybrid Vehicles.

UNIT III

8 hours

Power plants – working principle of Steam, Diesel, Hydro, Nuclear power plants. Mechanical Power Transmission - Belt Drives, Chain, Rope drives, Gear Drives and their applications.

Introduction to Robotics - Joints & links, configurations, and applications of robotics.

(Note: The subject covers only the basic principles of Civil and Mechanical Engineering systems. The evaluation shall be intended to test only the fundamentals of the subject)

Course Outcomes:

On completion of the course, the student should be able to

CO1: Understand the role and importance of mechanical engineering and engineering materials

CO2: Identify the different manufacturing processes for engineering applications and explain the basics of thermal engineering and its applications.

CO3: Explain the working of different mechanical power transmission systems, power plants and robotics.

Textbooks:

1. Internal Combustion Engines by V.Ganesan, By Tata McGraw Hill publications (India) Pvt. Ltd.
2. A Text book of Theory of Machines by S.S. Rattan, Tata McGraw Hill Publications, (India) Pvt. Ltd.
3. An introduction to Mechanical Engg by Jonathan Wicker and Kemper Lewis, Cengage Learning India Pvt. Ltd.

Reference Books:

1. Appu Kuttan KK, Robotics, I.K. International Publishing House Pvt. Ltd. Volume-I
2. 3D printing & Additive Manufacturing Technology- L. Jyothish Kumar, Pulak MPandey, Springer publications
3. Thermal Engineering by Mahesh M Rathore Tata McGraw Hill publications (India) Pvt. Ltd.
4. G. Shanmugam and M.S.Palanisamy, Basic Civil and the Mechanical Engineering, Tata McGraw Hill publications (India) Pvt. Ltd.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year I Semester

23CSE101 INTRODUCTION TO PROGRAMMING

L	T	P	C
3	0	0	3

Course Objectives:

- Comprehensive knowledge to computer systems, programming languages, and problem-solving techniques.
- Know the concept of control structures and their usage in programming.
- Introduce to the arrays, memory models, and basic string concepts
- Gain a knowledge from the concept of functions, including declaration, definition, and various aspects of function usage.
- Acquire the advanced programming concepts, including user-defined data types, pointers, and file handling.

UNIT I	INTRODUCTION TO PROGRAMMING AND PROBLEM SOLVING	9 hours
---------------	--	----------------

History of Computers, Basic organization of a computer: ALU, input-output units, memory, program counter, Introduction to Programming Languages, Basics of a Computer Program- Algorithms, flowcharts (Using Dia Tool), pseudo code. Introduction to Compilation and Execution, Primitive Data Types, Variables, and Constants, Basic Input and Output, Operations, Type Conversion, and Casting. Problem solving techniques: Algorithmic approach, characteristics of algorithm, Problem solving strategies: Top-down approach, Bottom-up approach, Time and space complexities of algorithms.

UNIT II	CONTROL STRUCTURES	9 hours
----------------	---------------------------	----------------

Simple sequential programs Conditional Statements (if, if-else, switch), Loops (for, while, do- while) Break and Continue.

UNIT III	ARRAYS AND STRINGS	9 hours
-----------------	---------------------------	----------------

Arrays indexing, memory model, programs with array of integers, two dimensional arrays, Introduction to Strings, String Operations and String functions.

UNIT IV	POINTERS & USER DEFINED DATA TYPES	9 hours
----------------	---	----------------

Pointers, dereferencing and address operators, pointer and address arithmetic, array manipulation using pointers, User-defined data types-Structures and Unions, Dynamic memory allocation.

UNIT V	FUNCTIONS & FILE HANDLING	9 hours
---------------	--------------------------------------	----------------

Introduction to Functions, Function Declaration and Definition, Function call Return Types and Arguments, modifying parameters inside functions using pointers, arrays as parameters. Scope and Lifetime of Variables, Basics of File Handling

Note: The syllabus is designed with C Language as the fundamental language of implementation.

Course Outcomes:

A student after completion of the course will be able to

CO1: Illustrate the basic computer concepts and programming principles of C language.

CO2: Develop programs using various control structures in 'C'.

CO3: Design applications using arrays and basic string manipulation.

CO4: Demonstrate the applications of pointers, user-defined types and dynamic memory allocation.

CO5: Design various applications using functions and file concepts.

Textbooks:

1. C Programming, A Problem Solving Approach, Forouzan, Gilberg, Prasad, CENGAGE, 3rd edition.

Reference Books:

1. Computing fundamentals and C Programming, Balagurusamy, E., McGraw-Hill Education, 2008.
2. Programming in C, Rema Theraja, Oxford, 2016, 2nd edition
3. "The C Programming Language", Brian W. Kernighan and Dennis M. Ritchie, Prentice-Hall, 1988
4. Schaum's Outline of Programming with C, Byron S Gottfried, McGraw-Hill Education, 1996

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year I Semester

23ENG201 COMMUNICATIVE ENGLISH LABORATORY

L	T	P	C
0	0	2	1

Course Objectives:

The main objective of introducing this course, Communicative English Laboratory, is to expose the students to a variety of self-instructional, learner friendly modes of language learning. The students will get trained in basic communication skills and also make them ready to face job interviews.

List of Topics:

1. Vowels & Consonants
2. Neutralization/Accent Rules
3. Communication Skills & JAM
4. Role Play or Conversational Practice
5. E-mail Writing
6. Resume Writing, Cover letter, SOP
7. Group Discussions-methods & practice
8. Debates - Methods & Practice
9. PPT Presentations/ Poster Presentation
10. Interviews Skills

Course Outcomes:

- CO1: Understand the English speech sounds, stress, rhythm, intonation and syllabic division for better listening and speaking
- CO2: Apply communication strategies and implement them in language learning activities.
- CO3: Analyze and enhance job-relevant writing skills
- CO4: Evaluate and exhibit professionalism in debates and group discussions.
- CO5: Make effective presentations by developing public speaking abilities

Suggested Software:

1. Walden Infotech
2. Young India Films

Reference Books:

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year I Semester

23CHE202 CHEMISTRY LABORATORY

L	T	P	C
0	0	2	1

Course Objectives:

- Verify the fundamental concepts with experiments.

List of Experiments:

1. Measurement of $10Dq$ by spectrophotometric method
2. Conductometric titration of strong acid vs. strong base
3. Conductometric titration of weak acid vs. strong base
4. Determination of cell constant and conductance of solutions
5. Potentiometry - determination of redox potentials and emfs
6. Determination of Strength of an acid in Pb-Acid battery
7. Preparation of a Bakelite
8. Verify Lambert-Beer's law
9. Wavelength measurement of sample through UV-Visible Spectroscopy
10. Identification of functional groups in simple organic compounds by IR
11. Preparation of nanomaterials by precipitation method
12. Estimation of Ferrous Iron by Dichrometry

Course Outcomes:

At the end of the course, the students will be able to

CO1: Determine the cell constant and conductance of solutions.

CO2: Prepare advanced polymer Bakelite materials.

CO3: Measure the strength of an acid present in secondary batteries.

CO4: Measure the wavelength of absorption of some organic compounds using UV-Vis spectroscopy.

CO5: Determine the EMF & redox potentials using potentiometric titrations.

Reference Books:

1. Vogel's Quantitative Chemical Analysis 6th Edition 6th Edition" Pearson Publications by J. Mendham, R.C.Denney, J.D.Barnes and B. Sivasankar

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year I Semester

23CSE201 COMPUTER PROGRAMMING LABORATORY

L	T	P	C
0	0	3	1.5

Course Objectives:

- Provide hands-on experience in programming fundamentals, algorithm design, and basic problem-solving techniques.
- Enable students to implement control structures for program flow control in practical scenarios.
- Reinforce understanding of arrays, memory models, and string manipulation through practical exercises
- Provide hands-on practice with functions, function calls, and parameter manipulation using pointers.
- Offer practical exposure to advanced programming concepts, including user-defined data types, file handling, and pointer operations.

UNIT I

WEEK 1

Objective: Getting familiar with the programming environment on the computer and writing the first program.

Suggested Experiments/Activities:

Tutorial 1: Problem-solving using Computers.

Lab1: Familiarization with programming environment

- i) Basic Linux environment and its editors like Vi, Vim & Emacs etc.
- ii) Exposure to Turbo C, gcc
- iii) Writing simple programs using printf(), scanf()

WEEK 2

Objective: Getting familiar with how to formally describe a solution to a problem in a series of finite steps both using textual notation and graphic notation.

Suggested Experiments /Activities:

Tutorial 2: Problem-solving using Algorithms and Flow charts.

Lab 1: Converting algorithms/flow charts into C Source code.

Developing the algorithms/flowcharts for the following sample programs

- i) Sum and average of 3 numbers
- ii) Conversion of Fahrenheit to Celsius and vice versa

Simple interest calculation

WEEK 3

Objective: Learn how to define variables with the desired data-type, initialize them with appropriate values and how arithmetic operators can be used with variables and constants.

Suggested Experiments/Activities:

Tutorial 3: Variable types and type conversions:

Lab 3: Simple computational problems using arithmetic expressions.

Problems to Practice:

- i) Finding the square root of a given number
- ii) Finding compound interest
- iii) Area of a triangle using heron's formulae
- iv) Distance travelled by an object

UNIT II

WEEK 4

Objective: Explore the full scope of expressions, type-compatibility of variables & constants and operators used in the expression and how operator precedence works.

Suggested Experiments/Activities:

Tutorial 4: Operators and the precedence and associativity:

Lab 4: Write C program to solve Simple computational problems using the operator's precedence and associativity

Problems to Practice:

- i) Evaluate the following expressions.
 - a. $A+B*C+(D*E) + F*G$
 - b. $A/B*C-B+A*D/3$
 - c. $A+++B---A$
 - d. $J= (i++) + (++i)$
- ii) Find the maximum of three numbers using conditional operator
- iii) Take marks of 5 subjects in integers, and find the total, average in float

WEEK 5

Objective: Explore the full scope of different variants of "if construct" namely if-else, null-else, if-else if*-else, switch and nested-if including in what scenario each one of them can be used and how to use them. Explore all relational and logical operators while writing conditionals for "if construct".

Suggested Experiments/Activities:

Tutorial 5: Branching and logical expressions:

Lab 5: Write C program for Problems involving if-then-else structures.

Problems to Practice:

- i) Write a C program to find the max and min of four numbers using if-else.
- ii) Write a C program to generate electricity bill.
- iii) Find the roots of the quadratic equation.
- iv) Write a C program to simulate a calculator using switch case.
- v) Write a C program to find the given year is a leap year or not.

WEEK 6

Objective: Explore the full scope of iterative constructs namely while loop, do-while loop and for loop in addition to structured jump constructs like break and continue including when each of these statements is more appropriate to use.

Suggested Experiments/Activities:

Tutorial 6: Loops, while and for loops

Lab 6: Write a C program for Iterative problems e.g., the sum of series

Problems to Practice:

- i) Find the factorial of given number using any loop.
- ii) Find the given number is a prime or not.
- iii) Compute sine and cos series
- iv) Checking a number palindrome
- v) Construct a pyramid of numbers.

UNIT III

WEEK 7:

Objective: Explore the full scope of Arrays construct namely defining and initializing 1-D and 2-D and more generically n-D arrays and referencing individual array elements from the defined array. Using integer 1-D arrays, explore search solution linear search.

Suggested Experiments/Activities:

Tutorial 7: 1 D Arrays: searching.

Lab 7: Write a C program to solve 1D Array manipulation, linear search

Problems to Practice:

- i) Find the min and max of a 1-D integer array.
- ii) Perform linear search on 1D array.
- iii) The reverse of a 1D integer array
- iv) Find 2's complement of the given binary number.
- v) Eliminate duplicate elements in an array.

WEEK 8:

Objective: Explore the difference between other arrays and character arrays that can be used as Strings by using null character and get comfortable with string by doing experiments that will reverse a string and concatenate two strings. Explore sorting solution bubble sort using integer arrays.

Suggested Experiments/Activities:

Tutorial 8: 2 D arrays, sorting and Strings.

Lab 8: Write a C program to solve Matrix problems, String operations, Bubble sort

Problems to Practice:

- i) Addition of two matrices
- ii) Multiplication two matrices
- iii) Sort array elements using bubble sort
- iv) Concatenate two strings without built-in functions
- v) Reverse a string using built-in and without built-in string functions

UNIT IV

WEEK 9:

Objective: Explore pointers to manage a dynamic array of integers, including memory allocation & value initialization, resizing changing and reordering the contents of an array and memory de-allocation using malloc (), calloc (), realloc () and free () functions. Gain experience processing command-line arguments received by C

Suggested Experiments/Activities:

Tutorial 9: Pointers, structures and dynamic memory allocation

Lab 9: Write a C program for Pointers and structures, memory dereference.

Problems to Practice:

- i) Write a C program to find the sum of a 1D array using malloc()
- ii) Write a C program to find the total, average of n students using structures
- iii) Enter n students data using calloc() and display failed students list
- iv) Read student name and marks from the command line and display the student details alongwith the total.
- v) Write a C program to implement realloc()

WEEK 10:

Objective: Experiment with C Structures, Unions, bit fields and self-referential structures(Singly linked lists) and nested structures

Suggested Experiments/Activities:

Tutorial 10: Bitfields, Self-Referential Structures, Linked lists

Lab10 : Bitfields, linked lists

Read and print a date using dd/mm/yyyy format using bit-fields and differentiate the same without using bit- fields

- i) Create and display a singly linked list using self-referential structure.
- ii) Demonstrate the differences between structures and unions using a C program.
- iii) Write a C program to shift/rotate using bitfields.
- iv) Write a C program to copy one structure variable to another structure of the same type.

UNIT V

WEEK 11:

Objective: Explore the Functions, sub-routines, scope and extent of variables, doing some experiments by parameter passing using call by value. Basic methods of numerical integration

Suggested Experiments/Activities:

Tutorial 11: Functions, call by value, scope and extent,

Lab 11: Write a C program to solve Simple functions using call by value, solving differential equations using Eulers theorem.

Problems to Practice:

- i) Write a C function to calculate NCR value.
- ii) Write a C function to find the length of a string.

- iii) Write a C function to transpose of a matrix.
- iv) Write a C function to demonstrate numerical integration of differential equations using Euler's method

WEEK 12:

Objective: Explore how recursive solutions can be programmed by writing recursive functions that can be invoked from the main by programming at-least five distinct problems that have naturally recursive solutions.

Suggested Experiments/Activities:

Tutorial 12: Recursion, the structure of recursive calls

Lab 12: Write C program for Recursive functions.

Problems to Practice:

- i) Write a recursive function to generate Fibonacci series.
- ii) Write a recursive function to find the lcm of two numbers.
- iii) Write a recursive function to find the factorial of a number.
- iv) Write a C Program to implement Ackermann function using recursion.
- v) Write a recursive function to find the sum of series.

WEEK 13:

Objective: Explore the basic difference between normal and pointer variables, Arithmetic operations using pointers and passing variables to functions using pointers

Suggested Experiments/Activities:

Tutorial 13: Call by reference, dangling pointers

Lab 13: Write a C program to solve Simple functions using Call by reference, Dangling pointers.

Problems to Practice:

- i) Write a C program to swap two numbers using call by reference.
- ii) Demonstrate Dangling pointer problem using a C program.
- iii) Write a C program to copy one string into another using pointer.
- iv) Write a C program to find no of lowercase, uppercase, digits and other characters using pointers.

WEEK 14:

Objective: To understand data files and file handling with various file I/O functions. Explore the differences between text and binary files.

Suggested Experiments/Activities:

Tutorial 14: File handling

Lab 14: Write a C program to handle File operations.

Problems to Practice:

- i) Write a C program to write and read text into a file.
- ii) Write a C program to write and read text into a binary file using fread() and fwrite()
- iii) Copy the contents of one file to another file.
- iv) Write a C program to merge two files into the third file using command-line arguments.
- v) Find no. of lines, words and characters in a file.

Write a C program to print last n characters of a given file.

Course Outcomes:

- CO1: Implement coding and debugging the simple programs, create algorithms, and practice problem solving strategies using programming languages.
- CO2: Demonstrate programs that incorporate conditional statements, loops, and break/continue statements to control program execution.
- CO3: Apply coding for real time examples with arrays, array indexing, and manipulate strings in programming tasks.
- CO4: Create, call, and debug functions, modify function parameters using pointers, and gain practical knowledge of variable scope within functions.
- CO5: Apply user-defined data types, manipulate files, pointer operations to solve real-world programming challenges.

Textbooks:

1. Ajay Mittal, Programming in C: A practical approach, Pearson.
2. C Programming, A Problem-Solving Approach, Forouzan, Gilberg, Prasad, CENGAGE

Reference Books:

1. Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Prentice-Hall of India
2. Byron Gottfried, Schaum's Outline of Programming with C, McGraw Hill

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year I Semester

23ME201 ENGINEERING WORKSHOP

L	T	P	C
0	0	3	1.5

Course Objectives:

To familiarize students with wood working, sheet metal operations, fitting and electrical house wiring skills

1. **Demonstration:** Safety practices and precautions to be observed in workshop.
2. **Wood Working:** Familiarity with different types of woods and tools used in wood working and make following joints.
 - a) Half – Lap joint
 - b) Mortise and Tenon joint
 - c) Corner Dovetail joint or Bridlejoint
3. **Sheet Metal Working:** Familiarity with different types of tools used in sheet metal working, Developments of following sheet metal job from GI sheets.
 - a) Tapered tray
 - b) Conical funnel
 - c) Elbow pipe
 - d) Brazing
4. **Fitting:** Familiarity with different types of tools used in fitting and do the following fitting exercises.
 - a) V-fit
 - b) Dovetail fit
 - c) Semi-circular fit
 - d) Bicycle tire puncture and change of two-wheeler tyre
5. **Electrical Wiring:** Familiarity with different types of basic electrical circuits and make the following connections.
 - a) Parallel and series
 - b) Two-way switch
 - c) Godown lighting
 - d) Tube light
 - e) Three phase motor
 - f) Soldering of wires
6. **Foundry Trade:** Demonstration and practice on Moulding tools and processes, Preparation of Green Sand Moulds for given Patterns.
7. **Welding Shop:** Demonstration and practice on Arc Welding and Gas welding. Preparation of Lap joint and Butt joint.
8. **Plumbing:** Demonstration and practice of Plumbing tools, Preparation of Pipe joints with coupling for same diameter and with reducer for different diameters.

Course Outcomes:

CO1: Identify workshop tools and their operational capabilities.

CO2: Practice on manufacturing of components using workshop trades including fitting, carpentry, foundry and welding.

CO3: Apply fitting operations in various applications.

CO4: Apply basic electrical engineering knowledge for House Wiring Practice

Textbooks:

1. Basic Workshop Technology: Manufacturing Process, Felix W.; Independently Published, 2019. Workshop Processes, Practices and Materials; Bruce J. Black, Routledge publishers, 5th Edn. 2015.
2. A Course in Workshop Technology Vol I. & II, B.S. Raghuwanshi, Dhanpath Rai & Co., 2015 & 2017.

Reference Books:

1. Elements of Workshop Technology, Vol. I by S. K. Hajra Choudhury & Others, MediaPromoters and Publishers, Mumbai. 2007, 14th edition
2. Workshop Practice by H. S. Bawa, Tata-McGraw Hill, 2004.
3. Wiring Estimating, Costing and Contracting; Soni P.M. & Upadhyay P.A.; AtulPrakashan, 2021-22.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year I Semester

23HUM201 HEALTH AND WELLNESS, YOGA AND SPORTS

L	T	P	C
0	0	1	0.5

Course Objectives:

The main objective of introducing this course is to make the students maintain their mental and physical wellness by balancing emotions in their life. It mainly enhances the essential traits required for the development of the personality.

UNIT I

5 hours

Concept of health and fitness, Nutrition and Balanced diet, basic concept of immunity Relationship between diet and fitness, Globalization and its impact on health, Body Mass Index(BMI) of all age groups.

Activities:

- Organizing health awareness programmes in community
- Preparation of health profile
- Preparation of chart for balance diet for all age groups

UNIT II

5 hours

Concept of yoga, need for and importance of yoga, origin and history of yoga in Indian context, classification of yoga, Physiological effects of Asanas- Pranayama and meditation, stress management and yoga, Mental health and yoga practice.

Activities:

Yoga practices – Asana, Kriya, Mudra, Bandha, Dhyana, Surya Namaskar

UNIT III

5 hours

Concept of Sports and fitness, importance, fitness components, history of sports, Ancient and Modern Olympics, Asian games and Commonwealth games.

Activities:

- Participation in one major game and one individual sport viz., Athletics, Volleyball, Basketball, Handball, Football, Badminton, Kabaddi, Kho-kho, Table tennis, Cricket etc.
- Practicing general and specific warm up, aerobics
- Practicing cardiorespiratory fitness, treadmill, run test, 9 min walk, skipping and running.

Course Outcomes:

After completion of the course the student will be able to

CO1: Understand the importance of yoga and sports for Physical fitness and sound health.

CO2: Demonstrate an understanding of health-related fitness components.

CO3: Compare and contrast various activities that help enhance their health.

CO4: Assess current personal fitness levels.

CO5: Develop Positive Personality

Reference Books:

1. Gordon Edlin, Eric Golanty. Health and Wellness, 14th Edn. Jones & Bartlett Learning, 2022
2. T.K.V.Desikachar. The Heart of Yoga: Developing a Personal Practice
3. Archie J.Bahm. Yoga Sutras of Patanjali, Jain Publishing Company, 1993
4. Wiseman, John Lofty,
5. The Sports Rules Book/ Human Kinetics with Thomas Hanlon. -- 3rd ed. HumanKinetics, Inc.2014

General Guidelines:

1. Institutes must assign slots in the Timetable for the activities of Health/Sports/Yoga.
2. Institutes must provide field/facility and offer the minimum of five choices of as many as Games/Sports.
3. Institutes are required to provide sports instructor / yoga teacher to mentor the students.

Evaluation Guidelines:

- Evaluated for a total of 100 marks.
- A student can select 6 activities of his/her choice with a minimum of 01 activity per unit. Each activity shall be evaluated by the concerned teacher for 15 marks, totalling to 90 marks.
- A student shall be evaluated by the concerned teacher for 10 marks by conducting vivavoce on the subject.

I Year II Semester

B. Tech I Year II Semester

23MAT102 DIFFERENTIAL EQUATIONS AND VECTOR CALCULUS

L	T	P	C
3	0	0	3

Course Objectives:

- To enlighten the learners in the concept of differential equations and multivariable calculus.
- To furnish the learners with basic concepts and techniques at plus two level to lead them into advanced level by handling various real-world applications.

UNIT I DIFFERENTIAL EQUATIONS OF FIRST ORDER AND 9 hours
FIRST DEGREE

Linear differential equations – Bernoulli's equations- Exact equations and equations reducible to exact form. Applications: Newton's Law of cooling – Law of natural growth and decay- Electrical circuits.

UNIT II LINEAR DIFFERENTIAL EQUATIONS OF HIGHER ORDER 9 hours
(CONSTANT COEFFICIENTS)

Definitions, homogenous and non-homogenous, complimentary function, general solution, particular integral, Wronskian, Method of variation of parameters. Simultaneous linear equations, Applications to L-C-R Circuit problems and Simple Harmonic motion.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS 9 hours

Introduction and formation of Partial Differential Equations by elimination of arbitrary constants and arbitrary functions, solutions of first order linear equations using Lagrange's method. Homogeneous Linear Partial differential equations with constant coefficients.

UNIT IV VECTOR DIFFERENTIATION 9 hours

Scalar and vector point functions, vector operator Del, Del applies to scalar point functions- Gradient, Directional derivative, del applied to vector point functions-Divergence and Curl, vector identities.

UNIT V VECTOR INTEGRATION 9 hours

Line Integral-circulation-work done, surface integral-flux, Green's theorem in the plane (without proof), Stoke's theorem (without proof), volume integral, Divergence theorem (without proof) and related problems.

Course Outcomes:

At the end of the course, the student will be able to

CO1: Find the solution of engineering problems formulated in the form of linear first order differential equations.

CO2: Solve the linear higher order differential equations related to various engineering fields.

CO3: Determine the solutions for linear partial differential equations that model the physical processes.

CO4: Interpret the physical meaning of different operators such as gradient, curl and divergence.

CO5: Estimate the work done against field, circulation and flux using vector calculus.

Textbooks:

1. Higher Engineering Mathematics, B. S. Grewal, Khanna Publishers, 2017, 44th Edition
2. Advanced Engineering Mathematics, Erwin Kreyszig, John Wiley & Sons, 2018, 10th Edition.

Reference Books:

1. Thomas Calculus, George B. Thomas, Maurice D. Weir and Joel Hass, Pearson Publishers, 2018, 14th Edition.
2. Advanced Engineering Mathematics, Dennis G. Zill and Warren S. Wright, Jones and Bartlett, 2018.
3. Advanced Modern Engineering Mathematics, Glyn James, Pearson publishers, 2018, 5th Edition.
4. Advanced Engineering Mathematics, R. K. Jain and S. R. K. Iyengar, Alpha Science International Ltd., 2021 5th Edition (9th reprint).
5. Higher Engineering Mathematics, B. V. Ramana, , McGraw Hill Education, 2017

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year II Semester

23PHY101 ENGINEERING PHYSICS

L	T	P	C
3	0	0	3

Course Objectives:

To bridge the gap between the Physics in school at 10+2 level and UG level engineering courses by identifying the importance of the optical phenomenon like interference, diffraction etc, enlightening the periodic arrangement of atoms in crystalline solids and concepts of quantum mechanics, introduce novel concepts of dielectric and magnetic materials, physics of semiconductors.

UNIT I WAVE OPTICS

9 hours

Interference: Introduction - Principle of superposition –Interference of light - Interference in thin films (Reflection Geometry) & applications - Colours in thin films- Newton's Rings, Determination of wavelength and refractive index.

Diffraction: Introduction - Fresnel and Fraunhofer diffractions - Fraunhofer diffraction due to single slit, double slit & N-slits (Qualitative) – Diffraction Grating - Dispersive power and resolving power of Grating (Qualitative). Polarization: Introduction -Types of polarization - Polarization by reflection, refraction and Double refraction - Nicol's Prism -Half wave and Quarter wave plates.

UNIT II CRYSTALLOGRAPHY AND X-RAY DIFFRACTION

9 hours

Crystallography: Space lattice, Basis, Unit Cell and lattice parameters – Bravais Lattices – crystal systems (3D) – coordination number - packing fraction of SC, BCC & FCC - Miller indices – separation between successive (hkl) planes.

X-ray diffraction: Bragg's law - X-ray Diffractometer – crystal structure determination by Laue's and powder methods

UNIT III QUANTUM MECHANICS AND FREE ELECTRON THEORY

9 hours

Quantum Mechanics: Dual nature of matter – Heisenberg's Uncertainty Principle – Significance and properties of wave function – Schrodinger's time independent and dependent wave equations– Particle in a one-dimensional infinite potential well.

Free Electron Theory: Classical free electron theory (Qualitative with discussion of merits and demerits) – Quantum free electron theory – electrical conductivity based on quantum free electron theory - Fermi-Dirac distribution - Density of states - Fermi energy

UNIT IV SEMICONDUCTORS

9 hours

Semiconductors: Formation of energy bands – classification of crystalline solids - Intrinsic semiconductors: Density of charge carriers – Electrical conductivity – Fermi level – Extrinsic semiconductors: density of charge carriers – dependence of Fermi energy on carrier concentration and temperature - Drift and diffusion currents – Einstein's equation – Hall effect and its applications.

UNIT V DIELECTRIC AND MAGNETIC MATERIALS

9 hours

Dielectric Materials: Introduction - Dielectric polarization - Dielectric polarizability, Susceptibility, Dielectric constant and Displacement Vector – Relation between the electric vectors - Types of polarizations- Electronic (Quantitative), Ionic (Quantitative) and Orientation polarizations (Qualitative) - Lorentz internal field - Clausius- Mossotti equation - complex dielectric constant – Frequency dependence of polarization – dielectric loss

Magnetic Materials: Introduction - Magnetic dipole moment - Magnetization-Magnetic susceptibility

and permeability – Atomic origin of magnetism - Classification of magnetic materials: Dia, para, Ferro, anti-ferro & Ferri magnetic materials - Domain concept for Ferromagnetism & Domain walls (Qualitative) - Hysteresis - soft and hard magnetic materials.

Course Outcomes:

- CO1:** Apply the knowledge of Interference, Diffraction and Polarization techniques for materials testing and explore their applications in both science and technology.
- CO2:** Explain the crystal structure in terms of atomic positions, unit cells, and crystal symmetry and also relate the crystal symmetry to the symmetry observed in a diffraction pattern.
- CO3:** Evaluate the Schrodinger wave equations for simple potentials and explain the concept of conductivity of different types of materials.
- CO4:** Distinguish the semiconductors using Fermi level and identify the type of semiconductors using Hall effect.
- CO5:** Explain the origin of fundamental magnetic phenomena and types of magnetic materials. Understand the induced fields in dielectrics, and electrical behaviour of dielectrics.

Textbooks:

1. A Textbook of Engineering Physics, M. N. Avadhanulu, P.G.Kshirsagar & TVS ArunMurthy, S. Chand Publications, 11th Edition 2019.
2. Engineering Physics - D.K.Bhattacharya and Poonam Tandon, Oxford press (2015)

Reference Books:

1. Engineering Physics - B.K. Pandey and S. Chaturvedi, Cengage Learning 2021.
2. Engineering Physics - Shatendra Sharma, Jyotsna Sharma, Pearson Education, 2018.
3. Engineering Physics” - Sanjay D. Jain, D. Sahasrabudhe and Girish, University Press.2010
4. Engineering Physics - M.R. Srinivasan, New Age international publishers (2009).

Web Resources: <https://www.loc.gov/rr/scitech/selected-internet/physics.html>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year II Semester

23ME101 ENGINEERING GRAPHICS

L	T	P	C
1	0	4	3

Course Objectives:

- To enable the students with various concepts like dimensioning, conventions and standards related to Engineering Drawing.
- To impart knowledge on the projection of points, lines and plane surfaces
- To improve the visualization skills for better understanding of projection of solids
- To develop the imaginative skills of the students required to understand Section of solids and Developments of surfaces.
- To make the students understand the viewing perception of a solid object in Isometric and Perspective projections.

UNIT I

9 hours

Introduction: Lines, Lettering and Dimensioning, Geometrical Constructions and Constructing regular polygons by general methods.

Curves: construction of ellipse, parabola and hyperbola by general, Cycloids, Involute, Normal and tangent to Curves.

Scales: Plain scales, diagonal scales and vernier scales.

UNIT II

9 hours

Orthographic Projections: Reference plane, importance of reference lines or Plane, Projections of a point situated in any one of the four quadrants.

Projections of Straight Lines: Projections of straight lines parallel to both reference planes, perpendicular to one reference plane and parallel to other reference plane, inclined to one reference plane and parallel to the other reference plane. Projections of Straight Line Inclined to both the reference planes

Projections of Planes: regular planes Perpendicular to both reference planes, parallel to one reference plane and inclined to the other reference plane; plane inclined to both the reference planes.

UNIT III

9 hours

Projections of Solids: Types of solids: Polyhedra and Solids of revolution. Projections of solids in simple positions: Axis perpendicular to horizontal plane, Axis perpendicular to vertical plane and Axis parallel to both the reference planes, Projection of Solids with axis inclined to one reference plane and parallel to another plane.

UNIT IV

9 hours

Sections of Solids: Perpendicular and inclined section planes, Sectional views and True shape of section, Sections of solids in simple position only.

Development of Surfaces: Methods of Development: Parallel line development and radial line development. Development of a cube, prism, cylinder, pyramid and cone.

UNIT V

9 hours

Conversion of Views: Conversion of isometric views to orthographic views; Conversion of orthographic views to isometric views.

Computer graphics: Creating 2D&3D drawings of objects including PCB and Transformations using Auto CAD (Not for end examination).

Course Outcomes:

Students will use the Auto CAD software and will be able to

CO1: Construct the geometrical constructions, engineering curves and scales.

CO2: Draw the projections of points, straight lines and planes

CO3: Draw the projections of solids in various positions

CO4: Sketch the sections of solids and developments of surfaces

CO5: Draw the conversion of the isometric views to orthographic views and vice versa.

Textbooks:

1. N. D. Bhatt, Engineering Drawing, Charotar Publishing House, 2016.

Reference Books:

1. Engineering Drawing, K.L. Narayana and P. Kannaiah, Tata McGraw Hill, 2013.
2. Engineering Drawing, M.B.Shah and B.C. Rana, Pearson Education Inc, 2009.
3. Engineering Drawing with an Introduction to AutoCAD, Dhananjay Jolhe, Tata McGraw Hill, 2017.

Mode of Evaluation: Day-to-day Evaluation, Mid Term Tests and End Semester Examination.

B. Tech I Year II Semester

23EEE101 BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

L	T	P	C
3	0	0	3

Course Objectives:

- To expose to the field of electrical & electronics engineering, laws and principles of electrical/electronic engineering and to acquire fundamental knowledge in the relevant field.

PART A: BASIC ELECTRICAL ENGINEERING

UNIT I DC & AC CIRCUITS

8 hours

DC Circuits: Electrical circuit elements (R, L and C), Ohm's Law and its limitations, KCL & KVL, series, parallel, series-parallel circuits, Super Position theorem, Simple numerical problems.

AC Circuits: A.C. Fundamentals: Equation of AC Voltage and current, waveform, time period, frequency, amplitude, phase, phase difference, average value, RMS value, form factor, peak factor, Voltage and current relationship with phasor diagrams in R, L, and C circuits, Concept of Impedance, Active power, reactive power and apparent power, Concept of power factor (Simple Numerical problems).

UNIT II MACHINES AND MEASURING INSTRUMENTS

8 hours

Machines: Construction, principle and operation of (i) DC Motor, (ii) DC Generator, (iii) Single Phase Transformer, (iv) Three Phase Induction Motor and (v) Alternator, Applications of electrical machines.

Measuring Instruments: Construction and working principle of Permanent Magnet Moving Coil (PMMC), Moving Iron (MI) Instruments and Wheat Stone bridge.

UNIT III ENERGY RESOURCES, ELECTRICITY BILL & SAFETY MEASURES

8 hours

Energy Resources: Conventional and non-conventional energy resources; Layout and operation of various Power Generation systems: Hydel, Nuclear, Solar & Wind power generation.

Electricity bill: Power rating of household appliances including air conditioners, PCs, Laptops, Printers, etc. Definition of "unit" used for consumption of electrical energy, two-part electricity tariff, calculation of electricity bill for domestic consumers.

Equipment Safety Measures: Working principle of Fuse and Miniature circuit breaker (MCB), merits and demerits. Personal safety measures: Electric Shock, Earthing and its types, Safety Precautions to avoid shock

Course Outcomes:

After the completion of the course students will be able to

CO1: Infer the basic AC and DC electrical circuits.

CO2: Analyze construction and operation of AC and DC machines, different electrical measuring instruments.

CO3: Illustrate operation of various power generating stations, energy consumption and electrical safety.

Textbooks:

1. Basic Electrical Engineering, D. C. Kulshreshtha, Tata McGraw Hill, 2019, FirstEdition
2. Power System Engineering, P.V. Gupta, M.L. Soni, U.S. Bhatnagar and A. Chakrabarti, Dhanpat Rai & Co, 2013
3. Fundamentals of Electrical Engineering, Rajendra Prasad, PHI publishers, 2014, ThirdEdition

Reference Books:

1. Basic Electrical Engineering, D. P. Kothari and I. J. Nagrath, Mc Graw Hill, 2019, Fourth Edition
2. Principles of Power Systems, V.K. Mehtha, S.Chand Technical Publishers, 2020
3. Basic Electrical Engineering, T. K. Nagsarkar and M. S. Sukhija, Oxford University Press, 2017
4. Basic Electrical and Electronics Engineering, S. K. Bhattacharya, Person Publications, 2018, Second Edition.

Web Resources:

1. <https://nptel.ac.in/courses/108105053>
2. <https://nptel.ac.in/courses/108108076>

PART B: BASIC ELECTRONICS ENGINEERING

Course Objectives:

This course provides the student with the fundamental skills to understand the principles of digital electronics, basics of semiconductor devices like diodes & transistors, characteristics and its applications.

UNIT I SEMICONDUCTOR DEVICES

8 hours

Introduction - Evolution of electronics – Vacuum tubes to nano electronics - Characteristics of PN Junction Diode — Zener Effect — Zener Diode and its Characteristics. Bipolar Junction Transistor - CB, CE, CC Configurations and Characteristics — Elementary Treatment of Small Signal CE Amplifier.

UNIT II BASIC ELECTRONIC CIRCUITS AND INSTRUMENTATION

8 hours

Rectifiers and power supplies: Block diagram description of a dc power supply, working of a full wave bridge rectifier, capacitor filter (no analysis), working of simple zener voltage regulator. Amplifiers: Block diagram of Public Address system, Circuit diagram and working of common emitter (RC coupled) amplifier with its frequency response. Electronic Instrumentation: Block diagram of an electronic instrumentation system.

UNIT III DIGITAL ELECTRONICS

8 hours

Overview of Number Systems, Logic gates including Universal Gates, BCD codes, Excess-3 code, Gray code, Hamming code. Boolean Algebra, Basic Theorems and properties of Boolean Algebra, Truth Tables

and Functionality of Logic Gates – NOT, OR, AND, NOR, NAND, XOR and XNOR. Simple combinational circuits–Half and Full Adder, Introduction to sequential circuits, Flip flops, Registers and counters (Elementary Treatment only)

Course Outcomes:

After the completion of the course students will be able to

CO1: Explain the theory, construction, and operation of electronic devices.

CO2: Apply the concept of science and mathematics to explain the working of diodes, transistors, and their applications.

CO3: Analyze logic gates and its applications in design of combinational circuits.

Textbooks:

1. R. L. Boylestad & Louis Nashlesky, Electronic Devices & Circuit Theory, Pearson Education, 2021.
2. R. P. Jain, Modern Digital Electronics, 4th Edition, Tata Mc Graw Hill, 2009

Reference Books:

1. R. S. Sedha, A Textbook of Electronic Devices and Circuits, S. Chand & Co, 2010.
2. Santiram Kal, Basic Electronics- Devices, Circuits and IT Fundamentals, Prentice Hall, India, 2002.
3. R. T. Paynter, Introductory Electronic Devices & Circuits – Conventional Flow Version, Pearson Education, 2009.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year II Semester

23CSE102 DATA STRUCTURES

L	T	P	C
3	0	0	3

Course Objectives:

- To attain proficiency in essential knowledge and skills for effectively employing linear data structures and making informed decisions when utilizing them to tackle real-world practical challenges.
- To gain a comprehensive understanding of linked lists, including their different types, operations, and practical applications.
- To explore stacks properties, operations and how stacks are utilized for the evaluation of mathematical expressions, including infix, postfix, and prefix notations.
- To understand the concepts of queues, their operations, and their applications in areas like breadth-first search and scheduling.
- To Provide an overview of Trees and Hashing as a technique for data organization.

UNIT I

9 hours

Introduction to Linear Data Structures: Definition and importance of linear data structures, Abstract data types (ADTs) and their implementation, Overview of time and space complexity analysis for linear data structures. Searching Techniques: Linear & Binary Search, Sorting Techniques: Bubble sort, Selection sort, Insertion Sort.

UNIT II

9 hours

Linked Lists: Singly linked lists: representation and operations, doubly linked lists and circular linked lists, Comparing arrays and linked lists, Applications of linked lists
Stacks: Introduction to stacks: properties and operations, implementing stacks using arrays and linked lists

UNIT III

9 hours

Applications of stacks in expression evaluation, backtracking, reversing list etc.
Queues: Introduction to queues: properties and operations, implementing queues using arrays and linked lists, Applications of queues in breadth-first search, scheduling, etc.
Deque: Introduction to deque (double-ended queues), Operations on deque and their applications.

UNIT IV

9 hours

Trees: Introduction to Trees, Binary Tree, Tree Traversal, Binary Search Tree – Insertion, Deletion & Traversal, Height Balanced Trees, Heap Tree, Heap Sort

UNIT V

9 hours

Graphs: Representations, Biconnected components, Topological sort.
Hashing: Brief introduction to hashing and hash functions, Collision resolution techniques: chaining and open addressing, Hash tables: basic implementation and operations, Applications of hashing in unique identifier generation, caching, etc.

Course Outcomes:

At the end of the course, Student will be able to

CO1: Apply their knowledge and skills in the context of linear data structures, algorithmic analysis, searching, and sorting, enabling them to solve practical problems.

CO2: Implement linked lists, stack and their applications.

CO3: Implement queues and its applications.

CO4: Implement tree operations for binary tree, binary search tree, height balanced trees and heap tree.

CO5: Design graph and analyse various collision resolution techniques for hashing.

Textbooks:

1. Data Structures and algorithm analysis in C, Mark Allen Weiss, Pearson, 2nd Edition.
2. Fundamentals of data structures in C, Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, Silicon Press, 2008

Reference Books:

1. Algorithms and Data Structures: The Basic Toolbox by Kurt Mehlhorn and Peter Sanders
2. C Data Structures and Algorithms by Alfred V. Aho, Jeffrey D. Ullman, and John E. Hopcroft
3. Problem Solving with Algorithms and Data Structures" by Brad Miller and David Ranum
4. Introduction to Algorithms by Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, and Clifford Stein
5. Algorithms in C, Parts 1-5 (Bundle): Fundamentals, Data Structures, Sorting, Searching, and Graph Algorithms" by Robert Sedgewick

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech I Year II Semester

23PHY201 ENGINEERING PHYSICS LABORATORY

L	T	P	C
0	0	2	1

Course Objectives:

To study the concepts of optical phenomenon like interference, diffraction etc., recognize the importance of energy gap in the study of conductivity and Hall effect in semiconductors and study the parameters and applications of dielectric and magnetic materials by conducting experiments.

List of Experiments:

1. Determination of radius of curvature of a given Plano-convex lens by Newton's rings.
2. Determination of wavelengths of different spectral lines in mercury spectrum using diffraction grating in normal incidence configuration.
3. Verification of Brewster's law
4. Determination of dielectric constant using charging and discharging method.
5. Study the variation of B versus H by magnetizing the magnetic material (B-H curve).
6. Determination of wavelength of Laser light using diffraction grating.
7. Estimation of Planck's constant using photoelectric effect.
8. Determination of the resistivity of semiconductors by four probe methods.
9. Determination of energy gap of a semiconductor using p-n junction diode.
10. Magnetic field along the axis of a current carrying circular coil by Stewart Gee's Method.
11. Determination of Hall voltage and Hall coefficient of a given semiconductor using Hall effect.
12. Determination of temperature coefficients of a thermistor.
13. Determination of acceleration due to gravity and radius of Gyration by using a Compound pendulum.
14. Determination of magnetic susceptibility by Kundt's tube method.
15. Determination of rigidity modulus of the material of the given wire using Torsional pendulum.
16. Sonometer: Verification of laws of stretched string.
17. Determination of young's modulus for the given material of wooden scale by non-uniform bending (or double cantilever) method.
18. Determination of Frequency of electrically maintained tuning fork by Melde's experiment.

Note: Any TEN of the listed experiments are to be conducted. Out of which any TWO experiments may be conducted in virtual mode.

Course Outcomes:

CO1: Know the various phenomena of light practically and gain knowledge about various optical technique methods.

CO2: Verify the theoretical concepts of optics, magnetism and dielectrics by hands on experiment.

CO3: Apply the scientific process in the conduct of semiconductor experiments and report the experimental findings.

CO4: Understand mechanical phenomena by instruments and apply them in real time applications.

CO5: Acquire and interpret experimental data to examine the physical laws.

Web Resources:

www.vlab.co.in

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year II Semester

23EEE201 ELECTRICAL AND ELECTRONICS ENGINEERING WORKSHOP

L	T	P	C
0	0	3	1.5

Course Objectives:

To impart knowledge on the fundamental laws & theorems of electrical circuits, functions of electrical machines and energy calculations.

Activities:

1. Familiarization of commonly used Electrical & Electronic Workshop Tools: Bread board, Solder, cables, relays, switches, connectors, fuses, Cutter, plier, screwdriver set, wire stripper, flux, knife/blade, soldering iron, de-soldering pump etc.
 - Provide some exercises so that hardware tools and instruments are learned to be used by the students.
2. Familiarization of Measuring Instruments like Voltmeters, Ammeters, multimeter, LCR-Q meter, Power Supplies, CRO, DSO, Function Generator, Frequency counter.
 - Provide some exercises so that measuring instruments are learned to be used by the students.
3. Components:
 - Familiarization/Identification of components (Resistors, Capacitors, Inductors, Diodes, transistors, IC's etc.) – Functionality, type, size, colour coding package, symbol, cost etc.
 - Testing of components like Resistor, Capacitor, Diode, Transistor, ICs etc. - Compare values of components like resistors, inductors, capacitors etc with the measured values by using instruments

PART A: ELECTRICAL ENGINEERING LABORATORY

List of experiments:

1. Verification of KCL and KVL
2. Verification of Superposition theorem
3. Measurement of Resistance using Wheat stone bridge
4. Magnetization Characteristics of DC shunt Generator
5. Measurement of Power and Power factor using Single-phase wattmeter
6. Measurement of Earth Resistance using Megger
7. Calculation of Electrical Energy for Domestic Premises

Note: Minimum Six Experiments to be performed.

Course Outcomes:

At the end of the course, the student will be able to

CO1: Analyze basic DC circuits.

CO2: Understand the usage of common electrical & electronic measuring instruments.

CO3: Understand the basic characteristics of electrical machines and perform energy calculations.

PART B: ELECTRONICS ENGINEERING LABORATORY

Course Objectives:

- To impart knowledge on the principles of digital electronics and fundamentals of electron devices & its applications.

List of Experiments:

1. Plot V-I characteristics of PN Junction diode A) Forward bias B) Reverse bias.
2. Plot V – I characteristics of Zener Diode and its application as voltage Regulator.
3. Implementation of half wave and full wave rectifier.
4. Plot Input & Output characteristics of BJT in CE and CB configurations
5. Frequency response of CE amplifier.
6. Simulation of RC coupled amplifier with the design supplied
7. Verification of Truth Table of AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR gates using ICs.
8. Verification of Truth Tables of S-R, J-K& D flip flops using respective ICs.

Tools / Equipment Required: DC Power supplies, Multi meters, DC Ammeters, DC Voltmeters, AC Voltmeters, CROs, all the required active devices.

Note: Minimum Six Experiments to be performed. All the experiments shall be implemented using Hardware / Software.

Course Outcomes:

At the end of the course, the student will be able to

CO1: Plot and discuss the characteristics of various electron devices.

CO2: Explain the operation of a digital circuit.

Reference Books:

1. R. L. Boylestad & Louis Nashlesky, Electronic Devices & Circuit Theory, Pearson Education, 2021.
2. R. P. Jain, Modern Digital Electronics, 4th Edition, Tata Mc Graw Hill, 2009
3. R. T. Paynter, Introductory Electronic Devices & Circuits – Conventional Flow Version, Pearson Education, 2009.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year II Semester

23CSE202 IT WORKSHOP

L	T	P	C
0	0	2	1

Course Objectives:

- To introduce the internal parts of a computer, peripherals, I/O ports, connecting cables
- To demonstrate configuring the system as Dual boot both Windows and other Operating Systems Viz. Linux, BOSS To teach basic command line interface commands on Linux.
- To teach the usage of Internet for productivity and self-paced life-long learning
- To introduce Compression, Multimedia and Antivirus tools and Office Tools such as Word processors, Spread sheets and Presentation tools.

PC Hardware & Software Installation

Task 1: Identify the peripherals of a computer, components in a CPU and its functions. Draw the block diagram of the CPU along with the configuration of each peripheral and submit to your instructor.

Task 2: Every student should disassemble and assemble the PC back to working condition. Lab instructors should verify the work and follow it up with a Viva. Also students need to go through the video which shows the process of assembling a PC. A video would be given as part of the course content.

Task 3: Every student should individually install MS windows on the personal computer. Lab instructor should verify the installation and follow it up with a Viva.

Task 4: Every student should install Linux on the computer. This computer should have windows installed. The system should be configured as dual boot (VMWare) with both Windows and Linux. Lab instructors should verify the installation and follow it up with a Viva

Task 5: Every student should install BOSS on the computer. The system should be configured as dual boot (VMWare) with both Windows and BOSS. Lab instructors should verify the installation and follow it up with a Viva

Internet & World Wide Web

Task 1: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate, to the instructor, how to access the websites and email. If there is no internet connectivity preparations need to be made by the instructors to simulate the WWW on the LAN.

Task 2: Web Browsers, Surfing the Web: Students customize their web browsers with the LAN proxy settings, bookmarks, search toolbars and pop up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured.

Task 3: Search Engines & Netiquette: Students should know what search engines are and how to use the search engines. A few topics would be given to the students for which they need to search on Google. This should be demonstrated to the instructors by the student.

Dept. of Computer Science and Engineering (Data Science)

Task 4: Cyber Hygiene: Students would be exposed to the various threats on the internet and would be asked to configure their computer to be safe on the internet. They need to customize their browsers to block pop ups, block active x downloads to avoid viruses and/or worms.

LaTeX and WORD

Task 1 – Word Orientation: The mentor needs to give an overview of La TeX and Microsoft (MS) office or equivalent (FOSS) tool word: Importance of La TeX and MS office or equivalent (FOSS) tool Word as word Processors, Details of the four tasks and features that would be covered in each, Using La TeX and word – Accessing, overview of toolbars, saving files, Using help and resources, rulers, format painter in word.

Task 2: Using La TeX and Word to create a project certificate. Features to be covered:- Formatting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colors, Inserting Header and Footer, Using Date and Time option in both La TeX and Word.

Task 3: Creating project abstract Features to be covered:-Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.

Task 4: Creating a Newsletter: Features to be covered:- Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes, Paragraphs and Mail Merge in word.

EXCEL

Excel Orientation: The mentor needs to tell the importance of MS office or equivalent (FOSS) tool Excel as a Spreadsheet tool, give the details of the four tasks and features that would be covered in each. Using Excel – Accessing, overview of toolbars, saving excel files, Using help and resources.

Task 1: Creating a Scheduler - Features to be covered: Gridlines, Format Cells, Summation, auto fill, Formatting Text

Task 2: Calculating GPA -. Features to be covered:- Cell Referencing, Formulae in excel – average, std. deviation, Charts, Renaming and Inserting worksheets, Hyper linking, Count function,

LOOKUP/VLOOKUP

Task 3: Split cells, freeze panes, group and outline, Sorting, Boolean and logical operators, Conditional formatting

POWER POINT

Task 1: Students will be working on basic power point utilities and tools which help them create basic power point presentations. PPT Orientation, Slide Layouts, Inserting Text, Word Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows in PowerPoint.

Task 2: Interactive presentations - Hyperlinks, Inserting –Images, Clip Art, Audio, Video, Objects, Tables and Charts.

Task 3: Master Layouts (slide, template, and notes), Types of views (basic, presentation, slide slotter, notes etc), and Inserting – Background, textures, Design Templates, Hidden slides.

AI TOOLS – ChatGPT

Task 1: Prompt Engineering: Experiment with different types of prompts to see how the model responds. Try asking questions, starting conversations, or even providing incomplete sentences to see how the model completes them.

Dept. of Computer Science and Engineering (Data Science)

- Ex: Prompt: "You are a knowledgeable AI. Please answer the following question: What is the capital of France?"

Task 2: Creative Writing: Use the model as a writing assistant. Provide the beginning of a story or a description of a scene, and let the model generate the rest of the content. This can be a fun way to brainstorm creative ideas

- Ex: Prompt: "In a world where gravity suddenly stopped working, people started floating upwards. Write a story about how society adapted to this new reality."

Task 3: Language Translation: Experiment with translation tasks by providing a sentence in one language and asking the model to translate it into another language. Compare the output to see how accurate and fluent the translations are.

- Ex: Prompt: "Translate the following English sentence to French: 'Hello, how are you doing today?'"

Course Outcomes:

CO1: Gain expertise in computer hardware, assembly, and dual-boot OS configuration, enhancing their ability to manage and troubleshoot computer systems effectively.

CO2: Learn to connect to the LAN, configure browsers, use search engines effectively, and practice cyber hygiene for secure internet use.

CO3: Create well-formatted documents and presentations using Microsoft Office and Latex

CO4: Gain proficiency in using Excel or its FOSS equivalent for tasks like scheduling, GPA calculation, data manipulation, and formatting.

CO5: Craft effective and tailored inputs to obtain desired responses from AI tools like ChatGPT.

7. IT Essentials PC Hardware and Software Labs and Study Guide, Patrick Regan– CISCO Press, Pearson Education, 3rd edition

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year II Semester

23CSE203 DATA STRUCTURES LABORATORY

L	T	P	C
0	0	3	1.5

Course Objectives:

The course aims to strengthen the ability of the students to identify and apply the suitable data structure for the given real-world problem. It enables them to gain knowledge in practical applications of data structures.

List of Experiments:

Exercise 1: Array Manipulation

- i) Write a program to reverse an array.
- ii) C Programs to implement the Searching Techniques – Linear & Binary Search
- iii) C Programs to implement Sorting Techniques – Bubble, Selection and Insertion Sort

Exercise 2: Linked List Implementation

- i) Implement a singly linked list and perform insertion and deletion operations.
- ii) Develop a program to reverse a linked list iteratively and recursively.
- iii) Solve problems involving linked list traversal and manipulation.

Exercise 3: Linked List Applications

- i) Create a program to detect and remove duplicates from a linked list.
- ii) Implement a linked list to represent polynomials and perform addition.
- iii) Implement a double-ended queue (deque) with essential operations.

Exercise 4: Double Linked List Implementation

- i) Implement a doubly linked list and perform various operations to understand its properties and applications.
- ii) Implement a circular linked list and perform insertion, deletion, and traversal.

Exercise 5: Stack Operations

- i) Implement a stack using arrays and linked lists.
- ii) Write a program to evaluate a postfix expression using a stack.
- iii) Implement a program to check for balanced parentheses using a stack.

Exercise 6: Queue Operations

- i) Implement a queue using arrays and linked lists.
- ii) Develop a program to simulate a simple printer queue system.
- iii) Solve problems involving circular queues.

Exercise 7: Stack and Queue Applications

- i) Use a stack to evaluate an infix expression and convert it to postfix.
- ii) Create a program to determine whether a given string is a palindrome or not.
- iii) Implement a stack or queue to perform comparison and check for symmetry.

Exercise 8: Binary Tree & Binary Search Tree

- i) Implement Binary tree using array and linked list.
- ii) Implement BST using Linked List.
- iii) Traversing of BST.

Exercise 9: Hashing

- i) Implement a hash table with collision resolution techniques.
- ii) Write a program to implement a simple cache using hashing.

Course Outcomes:

At the end of the course, Student will be able to

CO1: Implement different types of sorting and searching algorithms using array.

CO2: Demonstrating the different types of linked lists with its basic operations and applications.

CO3: Develop programs using stacks to handle evaluating expressions and solve related problems.

CO4: Apply queue-based algorithms for efficient task scheduling and other related real world problems.

CO5: Implement trees, graph and recognize scenarios where hashing is advantageous and design hash-based solutions for specific problems.

Textbooks:

1. Data Structures and algorithm analysis in C, Mark Allen Weiss, Pearson, 2nd Edition.
2. Fundamentals of data structures in C, Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, Silicon Press, 2008

Reference Books:

1. Algorithms and Data Structures: The Basic Toolbox by Kurt Mehlhorn and Peter Sanders
2. C Data Structures and Algorithms by Alfred V. Aho, Jeffrey D. Ullman, and John E. Hopcroft
3. Problem Solving with Algorithms and Data Structures" by Brad Miller and David Ranum
4. Introduction to Algorithms by Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, and Clifford Stein
5. Algorithms in C, Parts 1-5 (Bundle): Fundamentals, Data Structures, Sorting, Searching, and Graph Algorithms by Robert Sedgewick.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech I Year II Semester

23HUM202 NSS/NCC/SCOUTS AND GUIDES/COMMUNITY SERVICE

L	T	P	C
0	0	1	0.5

Course Objectives:

The objective of introducing this course is to impart discipline, character, fraternity, teamwork, social consciousness among the students and engaging them in selfless service.

UNIT I ORIENTATION

5 hours

General Orientation on NSS/NCC/ Scouts & Guides/Community Service activities, careerguidance.

Activities:

- i) Conducting –ice breaking sessions-expectations from the course-knowing personaltalents and skills
- ii) Conducting orientations programs for the students –future plans-activities-releasingroad map etc.
- iii) Displaying success stories-motivational biopics- award winning movies on societalissues etc.
- iv) Conducting talent show in singing patriotic songs-paintings- any other contribution.

UNIT II NATURE & CARE

5 hours

Activities:

- i) Best out of waste competition.
- ii) Poster and signs making competition to spread environmental awareness.
- iii) Recycling and environmental pollution article writing competition.
- iv) Organising Zero-waste day.
- v) Digital Environmental awareness activity via various social media platforms.
- vi) Virtual demonstration of different eco-friendly approaches for sustainable living.
- vii) Write a summary on any book related to environmental issues.

UNIT III COMMUNITY SERVICE

5 hours

Activities:

- i) Conducting One Day Special Camp in a village contacting village-area leaders- Surveyin the village, identification of problems- helping them to solve via media-authorities-experts-etc.
- ii) Conducting awareness programs on Health-related issues such as General Health, Mental health, Spiritual Health, HIV/AIDS,
- iii) Conducting consumer Awareness. Explaining various legal provisions etc.
- iv) Women Empowerment Programmes- Sexual Abuse, Adolescent Health and PopulationEducation.
- v) Any other programmes in collaboration with local charities, NGOs etc.

Course Outcomes:

After completion of the course the students will be able to

- CO1:** Understand the importance of discipline, character and service motto.
- CO2:** Solve some societal issues by applying acquired knowledge, facts, and techniques.
- CO3:** Explore human relationships by analyzing social problems.
- CO4:** Determine to extend their help for the fellow beings and downtrodden people.
- CO5:** Develop leadership skills and civic responsibilities.

Reference Books:

1. Nirmalya Kumar Sinha & Surajit Majumder, *A Text Book of National Service Scheme*
2. Vol.;I, Vidya Kutir Publication, 2021 (ISBN 978-81-952368-8-6)
3. *Red Book - National Cadet Corps* – Standing Instructions Vol I & II, DirectorateGeneral of NCC, Ministry of Defence, New Delhi
4. Davis M. L. and Cornwell D. A., “Introduction to Environmental Engineering”, McGraw Hill, New York 4/e 2008
5. Masters G. M., Joseph K. and Nagendran R. “Introduction to Environmental Engineering and Science”, Pearson Education, New Delhi. 2/e 2007

General Guidelines:

1. Institutes must assign slots in the Timetable for the activities.
2. Institutes are required to provide instructor to mentor the students.

Evaluation Guidelines:

- Evaluated for a total of 100 marks.
- A student can select 6 activities of his/her choice with a minimum of 01 activity per unit. Each activity shall be evaluated by the concerned teacher for 15 marks, totalling to 90 marks.
- A student shall be evaluated by the concerned teacher for 10 marks by conducting vivavoce on the subject.

II Year I Semester

B. Tech II Year I Semester

23HUM101 UNIVERSAL HUMAN VALUES

L	T	P	C
2	1	0	3

Course Prerequisite: None or Universal Human Values – I (desirable)

Course Description :

The course has 28 lectures and 14 tutorials in 5 Units. The lectures and tutorials are of 1-hour duration. Tutorial sessions are to be used to explore and practice what has been proposed during the lecture sessions. The Teacher's Manual provides the outline for lectures as well as practice sessions. The teacher is expected to present the issues to be discussed as propositions and encourage the students to have a dialogue.

Course Objectives: None. Universal Human Values-I (desirable)

The main objectives of the course is to

1. help the students appreciate the essential complementary between 'VALUES' and 'SKILLS' to ensure happiness and prosperity in continuity, which are the core aspirations of all human beings.
2. facilitate the development of a Holistic perspective among students towards life and profession based on right understanding of the Human reality, family, society and the rest of nature. Such holistic perspective forms the basis of Universal Human Values (UHV) and movement towards value-based living in a natural way.
3. highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behaviour and mutually enriching interaction with Nature.
4. aid the students to realize their full human potential and act accordingly.
5. assist the students to live with feeling of relationship, harmony and co-existence.

UNIT I INTRODUCTION TO VALUE EDUCATION

9 hours

Lecture 1: Understanding Value Education

Lecture 2: self-exploration as the Process for Value Education

Tutorial 1: Practice Session PS1 - Sharing about Oneself

Lecture 3: Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education)

Lecture 4: Continuous Happiness and Prosperity – the Basic Human Aspirations

Tutorial 2: Practice Session PS2 - Exploring Human Consciousness

Lecture 5: Happiness and Prosperity – Current Scenario

Lecture 6: Method to Fulfill the Basic Human Aspirations

Tutorial 3: Practice Session PS3 - Exploring Natural Acceptance

UNIT II HARMONY IN THE HUMAN BEING

9 hours

Lecture 7: Understanding Human being as the Co-existence of the self and the body.

Lecture 8: Distinguishing between the Needs of the self and the body

Tutorial 4: Practice Session PS4 - Exploring the difference of Needs of self and body.

Lecture 9: The body as an Instrument of the self

Lecture 10: Understanding Harmony in the self

Tutorial 5: Practice Session PS5 - Exploring Sources of Imagination in the self

Lecture 11: Harmony of the self with the body

Lecture 12: Programme to ensure self-regulation and Health

Tutorial 6: Practice Session PS6 - Exploring Harmony of self with the body

UNIT III HARMONY IN THE FAMILY AND SOCIETY

9 hours

Lecture 13: Harmony in the Family – the Basic Unit of Human Interaction

Lecture 14: 'Trust' – the Foundational Value in Relationship

Tutorial 7: Practice Session PS7 - Exploring the Feeling of Trust

Lecture 15: 'Respect' – as the Right Evaluation

Tutorial 8: Practice Session PS8 - Exploring the Feeling of Respect

Lecture 16: Other Feelings, Justice in Human-to-Human Relationship

Lecture 17: Understanding Harmony in the Society

Lecture 18: Vision for the Universal Human Order

Tutorial 9: Practice Session PS9 - Exploring Systems to fulfil Human Goal

UNIT IV HARMONY IN THE NATURE/EXISTENCE

9 hours

Lecture 19: Understanding Harmony in the Nature

Lecture 20: Interconnectedness, self-regulation and Mutual Fulfilment among the Four Orders of Nature

Tutorial 10: Practice Session PS10 - Exploring the Four Orders of Nature

Lecture 21: Realizing Existence as Co-existence at All Levels

Lecture 22: The Holistic Perception of Harmony in Existence

Tutorial 11: Practice Session PS11 - Exploring Co-existence in Existence.

**UNIT V IMPLICATIONS OF THE HOLISTIC UNDERSTANDING –
A LOOK AT PROFESSIONAL ETHICS**

9 hours

Lecture 23: Natural Acceptance of Human Values

Lecture 24: Definitiveness of (Ethical) Human Conduct

Tutorial 12: Practice Session PS12 - Exploring Ethical Human Conduct

Lecture 25: A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order

Lecture 26: Competence in Professional Ethics

Tutorial 13: Practice Session PS13 - Exploring Humanistic Models in Education

Lecture 27: Holistic Technologies, Production Systems and Management Models-Typical Case Studies

Lecture 28: Strategies for Transition towards Value-based Life and Profession

Tutorial 14: Practice Session PS14 - Exploring Steps of Transition towards Universal Human Order

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand the Natural Acceptance and basic human aspiration.

CO2: Aware of themselves and self-regulation.

CO3: Recognize human-human relationship (Justice) and identify human goals in the society.

CO4: Appreciate the harmony in the nature and existence.

CO5: Develop as socially and ecologically responsible engineers in handling problems with sustainable solutions (user-friendly and eco-friendly).

B. Tech II Year I Semester

23HUM102 ECONOMICS AND FINANCIAL ACCOUNTING FOR ENGINEERS

L	T	P	C
2	0	0	2

Course Prerequisite: NIL

Course Description:

The Engineering Economics and Financial Accounting aims to provide an insight into production, cost analysis, market structure, Accounting Basic concepts and financial Statement Analysis. The course is designed to give emphasis on the application of real life examples on various fundamental issues of economics and accounts. This course introduces the accounting system, principles, types of accounts, and financial statements etc. The ratio analysis and financial analysis are useful to know the positions of financial statements are explained to know the analysis of financial matters.

Course Objectives:

This course enables students to

1. Describe the nature of engineering economics in dealing with the issues of scarcity;
2. Know the supply, demand, production and cost analysis to analyze the impact of economic events on markets;
3. Explain the different market structures and price determination in various market conditions.
4. Explain the accounting principles, types of accounting and preparation of final accounts; and
5. Describe the financial statement analysis and investment evaluation through ratios and capital budgeting techniques.

UNIT I DEMAND ANALYSIS

6 hours

Scope and Significance of Economics- Elements of market Economy: Demand, Supply and Market Equilibrium- Theory of Demand, Elasticity of Demand, Supply and Law of Supply.

UNIT II PRODUCTION AND COST ANALYSIS

6 hours

Production Function – Short-run and long-run production – Cost Analysis: Cost concepts - Cost Structure of Firms and Output Decision- Break-Even Analysis (BEA) – significance and Limitations of BEA - Determination of Break Even Point (Simple Problems).

UNIT III MARKET STRUCTURE AND PRICING

6 hours

Classification of Markets - General Equilibrium and efficiency of Perfect competition, Monopoly, Monopolistic – Price determination under Perfect, Monopoly, and Monopolistic Competition, Pricing objectives- Pricing Strategies.

UNIT IV BASICS OF ACCOUNTING

6 hours

Accounting - Double Entry System - Accounting Principles - Classification of Accounts - Rules of Debit & Credit- Accounting Cycle: Journal, Ledger, Trial Balance. Final Accounts: Trading Account - Profit & Loss Account - Balance Sheet with Adjustments, (Simple Problems).

UNIT V FINANCIAL RATIO ANALYSIS AND CAPITAL BUDGETING

6 hours

Ratio Analysis - Liquidity, Solvency, Activity and Profitability Ratios - Capital Budgeting. (Simple Problems).

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand Engineering economics basic concepts,

CO2: Analyze the concepts of demand, elasticity, supply, Production, Cost Analysis and its essence in floating of an organization,

CO3: Compare various different market structures and identify suitable market,

CO4: Demonstrate an understanding and analyzing the accounting statements, and

CO5: Exhibit the ability to apply knowledge of ratio analysis and capital budgeting techniques in financial statement analysis and investment evaluation respectively.

Textbooks:

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year I Semester

23MAT107 PROBABILITY AND STATISTICS FOR COMPUTER SCIENCE

L	T	P	C
3	0	0	3

Course Prerequisite: 23MAT101, 23MAT102

Course Description:

This course provides an introduction to probability, distributions and statistics with applications. Topics include: Conditional probability, Random variables, Probability distributions, Joint densities, Bayesian inference, descriptive statistics, Correlation and Regression, Estimation, Confidence intervals, Hypothesis testing.

Course Objectives:

This course enables students to

1. To extend and formalize knowledge of the theory of probability and random variables.
2. To solve real time problems in engineering and science by using discrete and continuous distributions
3. To analyze and interpret basic summary and modeling techniques for Multi-variate data
4. To analyze the data by using descriptive statistics for decision making
5. To apply the statistical inference involving confidence interval and hypothesis testing in data analysis.

UNIT I PROBABILITY

9 hours

Introduction to Probability, Sample space and events, axioms of probability, theorems on probability, conditional probability, multiplication theorem and independence of events, Baye's theorem.

Random variables (discrete and continuous), probability density functions, distribution function, mathematical expectation, properties. moment generating function.

UNIT II PROBABILITY DISTRIBUTIONS

9 hours

Discrete probability distributions - Binomial, Poisson, Geometric and their properties

Continuous probability distributions - Uniform, Exponential, Gamma, Normal distributions and their properties, Chebychev's inequality.

UNIT III JOINT DISTRIBUTIONS

9 hours

Joint densities and Independence - Marginal distributions (discrete & continuous)- Expectation and Covariance, Correlation, Conditional densities and Regression, Curves of regression, Transformation of random variables.

UNIT IV STATISTICS FOR DATA ANALYSIS

9 hours

Data Visualization, Moments, skewness, kurtosis, correlation, correlation coefficient, rank correlation, principle of least squares, lines of regression, regression coefficients and their properties.

UNIT V STATISTICAL INFERENCE

9 hours

Population, sampling, Estimation, Point estimation, MLE, formulation of null hypothesis, alternative hypothesis, level of significance, types of errors and power of the test. Large Sample Tests: Test for single mean, single proportion, difference of means, difference of proportions, Confidence interval for parameters in one sample and two sample problems, t test for single mean, difference of means, test for ratio of variances.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand the probability concepts and their importance in engineering.

CO2: Apply discrete and continuous probability distributions to solve various engineering problems.

CO3: Get an idea about joint density functions, distribution functions to the random variables and analyse the multivariate problems in engineering

CO4: Apply the method of least squares to estimate the parameters of a regression model.

CO5: Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases.

B. Tech II Year I Semester

23CSD101 DATABASE SYSTEMS

L T P C

3 0 0 3

Course Objectives:

1. To understand the concept of DBMS and ER Modeling.
2. To explain the normalization, Query optimization and relational algebra.
3. To have an introductory knowledge about the storage and query processing techniques and the basic concepts of Information retrieval techniques
4. To learn about the internal storage structures using different file and indexing techniques which will help in physical DB design
5. To apply the concurrency control, recovery, security and indexing for the real time data.

UNIT I DATABASE SYSTEMS CONCEPTS AND DATA MODELING 9 hours

Introduction to Databases- File System Vs Database System - Data Models- Schemas and Instances - DBMS Architecture- Centralized - Client Server - Database Applications, Types of Databases.

Entity Relationship Model: Types of Attributes, Entities and Entity set, Relationship, Structural Constraints - Relational Model, Relational model Constraints - Mapping ER model to a relational schema - Integrity Constraints, Specialization and generalization using ER Diagrams.

UNIT II SQL 9 hours

The Database Language SQL – Simple Queries in SQL – Queries Involving Morethan One Relation, SQL functions(Data & Time, String conversion, Sub Queries, aggregate operators, null values, complex integrity constraints, triggers, views and indexes, Dynamic SQL, Cursors, Introduction to JDBC, Stored Procedures.

UNIT III NORMALIZATION 9 hours

Translating SQL Queries into Relational Algebra and Relational Calculus, Guidelines for Relational Schema – Functional dependency; Normalization, Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form; Join dependency and Fifth Normal form

UNIT IV DATA STORAGE AND TRANSACTION MANAGEMENT 9 hours

Storage strategies: Indices, B-trees, B+-trees, hashing. Two-Phase Locking Techniques for Concurrency Control -ACID Property– Concurrency Control based on timestamp – Recovery Concepts – Recovery based on deferred update – Recovery techniques – Buffer management

UNIT V SECURITY AND RECENT TRENDS

9 hours

Database Authentication, Authorization and access control, DAC, MAC and RBAC models, SQL injection. Introduction, Need of NoSQL, CAP Theorem and Recent trends.

Course Outcomes:

Upon successful completion of the course, students will be able to

CO1: Construct an ER model and derive the relational schemas from the model.

CO2: Understand the conceptual and logical database design using SQL queries.

CO3: Apply Normalization to improve database design.

CO4: Interpret the basic issues of storage and transaction management.

CO5: Analyse the fundamental security concepts for database

Textbooks:

1. A. Silberschatz, H. F. Korth S. Sudershan, Database System Concepts, McGraw Hill, 7th Edition 2021.
2. R. Elmasri S. B. Navathe, Fundamentals of Database Systems, Addison Wesley, 2015

Reference Books:

1. Raghu Ramakrishnan, Database Management Systems, McGraw-Hill, 4th edition, 2015.
2. Thomas Connolly, Carolyn Begg, Database Systems: A Practical Approach to Design, Implementation and Management, 6th Edition, 2012.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year I Semester

23CSD102 DESIGN AND ANALYSIS OF ALGORITHMS

L T P C

3 0 0 3

Course Objectives:

The main objectives of the course are to

1. Introduce the concepts of algorithm analysis, Tree and Graph applications.
2. Discuss various algorithm design strategies with examples.
3. Introduce NP-Hard and NP-Complete problem concepts

UNIT I

9 hours

Introduction to Algorithm Analysis, Space and Time Complexity Analysis, Asymptotic Notations. AVL Trees – Creation, Insertion, Deletion Operations and Applications, B-Trees – Creation, Insertion, Deletion operations and Applications, Graphs – Basic search and Traversals

UNIT II

9 hours

Divide and Conquer: The General Method, Quick Sort, Merge Sort, Strassen's matrix multiplication. Greedy Method: General Method, Job Sequencing with deadlines, Knapsack Problem, Minimum cost spanning trees

UNIT III

9 hours

Dynamic Programming: General Method, Allpairs shortest paths, Single Source Shortest Paths– General Weights (Bellman-Ford Algorithm), 0/1 Knapsack, Travelling Salesperson problem

UNIT IV

9 hours

Backtracking: General Method, 8-Queens Problem, Sum of Subsets problem, Graph Coloring.

Branch and Bound: The General Method, 0/1 Knapsack Problem, Travelling Salesperson problem

UNIT V

9 hours

NP-Hard and NP-Complete Problems: Basic Concepts, Cook's theorem. NP-Hard Graph Problems: Clique Decision Problem (CDP), Chromatic Number Decision Problem (CNDP). NP-Hard Scheduling Problems: Scheduling Identical Processors, Job Shop Scheduling

Course Outcomes:

After completion of the course, students will be able to

CO1: Illustrate the working of the advanced tree and graph data structures and their applications.

CO2: Design Divide and Conquer strategy and Greedy method for different problems.

CO3: Demonstrate Dynamic programming method to solve problems.

CO4: Apply Backtracking and Branch & bound strategy to solve problems.

CO5: Understand NP-Hard and NP-Complete problems

Textbooks:

1. Fundamentals of Data Structures in C++, Horowitz, Ellis; Sahni, Sartaj; Mehta, Dinesh, 2nd Edition Universities Press
2. Computer Algorithms in C++, Ellis Horowitz, Sartaj Sahni, Sanguthevar Rajasekaran, 2nd Edition University Press

Reference Books:

1. Data Structures and program design in C, Robert Kruse, Pearson Education Asia
2. An introduction to Data Structures with Applications, Trembley & Sorenson, McGraw Hill
3. The Art of Computer Programming, Vol.1: Fundamental Algorithms, Donald E Knuth, Addison-Wesley, 1997.
4. Data Structures using C & C++: Langsam, Augenstein & Tanenbaum, Pearson, 1995
5. Algorithms + Data Structures & Programs:, N. Wirth, PHI
6. Fundamentals of Data Structures in C++: Horowitz Sahni & Mehta, Galgotia Pub.

Online Resources:

2. <http://peterindia.net/Algorithms.html>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year I Semester

23CSD104 JAVA PROGRAMMING

L T P C

3 0 0 3

Course Objectives:

The learning objectives of this course are to:

1. Identify Java language components and how they work together in applications.
2. Learn the fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries.
3. Learn how to extend Java classes with inheritance and interfaces in Java applications.
4. Understand how to use Java packages, Exceptions and I/O Streams for program development.
5. Understand how to design applications with threads in Java.

UNIT I FUNDAMENTAL BUILDING BLOCKS

9 hours

Object Oriented Programming: Basic concepts, Program Structure in Java: Introduction, Writing Simple Java Programs, Data types, Type casting, Tokens in Java Programs, Java Statements –Control statements, Looping Statements, Break Statement, Continue Statement. Command Line Arguments, User Input to Programs, Escape Sequences, Comments, Programming Style.

Arrays: one dimensional and multi-dimensional array.

UNIT II CLASSES AND METHODS

9 hours

Classes and Objects: Introduction, Class Declaration and Modifiers, Class Members, Declaration of Class Objects, Assigning One Object to Another, Access Control for Class Members, Accessing Private Members of Class, Constructor Methods for Class, Overloaded Constructor Methods, Nested Classes, Final Class and Methods, Passing Arguments by Value and by Reference, this and static keywords.

Methods: Introduction, Defining Methods, Overloaded Methods, Class Objects as Parameters in Methods, Access Control, Recursive Methods, Nesting of Methods.

UNIT III INHERITANCE

9 hours

Inheritance: Basics, Types of Inheritances, Usage of Super, Method Overriding, Abstract Classes, Final Keyword.

Interfaces: Creating, Implementing, Using, Extending, and Nesting of interfaces.

UNIT IV PACKAGES AND STREAMS

9 hours

Packages: Defining, Finding and Importing packages, Member Access.

Exception Handling: Fundamentals, Types, Multiple catch clauses, Nested try blocks, Thrown Class, Using Finally and Throws, Built-in exceptions, User-defined exceptions.

I/O Streams: Byte Stream Classes and Character Stream Classes.

UNIT V MULTITHREADED PROGRAMMING

9 hours

String Handling in Java: Introduction, Interface Char Sequence, Class String, Methods for Extracting Characters from Strings, Comparison, Modifying, Searching; Class String Buffer.

Multithreaded Programming: Introduction, Need for Multiple Threads Multithreaded Programming for Multi-core Processor, Thread Class, Main Thread-Creation of New Threads, Thread States, Inter-thread Communication - Suspending, Resuming, and Stopping of Threads.

Course Outcomes:

After completion of the course, students will be able to

CO1: Analyze problems, design solutions using OOP principles, and implement them efficiently in Java.

CO2: Design and implement classes to model real-world entities, with a focus on attributes, behaviours, and relationships between objects.

CO3: Demonstrate an understanding of inheritance hierarchies and polymorphic behaviour, including method overriding and interface concept.

CO4: Apply Competence in handling exceptions and errors to write robust and fault-tolerant code.

CO5: Develop multithreaded applications with synchronization.

Textbooks:

1. JAVA one step ahead, Anitha Seth, B.L.Juneja, Oxford.
2. Joy with JAVA, Fundamentals of Object Oriented Programming, DebasisSamanta, MonalisaSarma, Cambridge, 2023.

Reference Books:

1. The complete Reference Java, 11th edition, Herbert Schildt, TMH
2. Introduction to Java programming, 7th Edition, Y Daniel Liang, Pearson
3. JAVA for Programmers, Paul Deitel, Harvey Deitel, 4th Edition, Pearson.

2. https://infyspringboard.onwingspan.com/web/en/app/toc/lex_auth_012880464547618816347_shared/overview

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year I Semester

23CSD201 DATABASE SYSTEMS LABORATORY

L T P C
0 0 3 1.5

Course Objectives:

1. To understand the components of DBMS and to study the database design.
2. To study the retrieval of data using relational algebra and calculus and the concept of normal forms in the design of database.
3. To comprehend the structure of SQL Queries to query, update, and manage a database.
4. To understand all constraints to develop a business application using cursors, triggers and stored procedures.
5. To provide sufficient skill to utilize the DBMS concept in real time applications.

List of Programs:

1. Design Conceptual database schema using ER Modelling Software Tools.
2. Development of Relational Database Schemas for Deposit/Customer/ borrow/ branch using DDL Constructs of SQL.
3. To perform various data manipulation commands such as select, insert, update etc. of SQL on Relational Database.
4. To perform various DCL and TCL construct of SQL on Relational Database.
5. Implement different types of referential and integrity constraints on Relation Database.
6. To apply the concept of Aggregating Data using Group functions.
7. To retrieve the queries using Group by, Having and Order by clauses of SQL.
8. Design and development of Banking database and perform various type of JOIN operations.
9. Insert the Data into table and use COMMIT, ROLLBACK and SAVEPOINT in PL/SQL
10. Write a trigger that automatically deletes students when they graduate
11. Develop programs using features parameters in a CURSOR for UPDATE
12. a) Create a cursor to update the salary of employees in EMP table.
b) Write a PL/SQL program to raise an Exception when the bonus exceeds salary.
13. Design and implementation real time project with database connection.

Course Outcomes:

Upon successful completion of the course, students will be able to

CO1: Perform table creation, maintain, and manipulate a relational database using SQL.

CO2: Implement complex queries using SQL.

CO3: Apply Queries using Advanced Concepts of SQL.

CO4: Build PL/SQL programs including stored procedures, functions, cursors and triggers.

CO5: Develop a real-world application to access and render data.

Reference Books:

1. Network Analysis—ME Van Valkenburg, Prentice Hall of India, revised 3rd Edition, 2019.
2. Engineering Circuit Analysis by William H. Hayt, Jack Kemmerly, Jamie Phillips, Steven M. Durbin, 9th Edition 2020.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech II Year I Semester

23CSD202 JAVA PROGRAMMING LABORATORY

L	T	P	C
0	0	3	1.5

Course Objectives:

The aim of this course is to

1. Practice object-oriented programming in the Java programming language
2. Implement Classes, Objects, Methods, Inheritance and interfaces concepts.
3. Illustrate implement Packages and Exception handling mechanism.
4. Construct Threads and various states.

List of Experiments:

1. Write a JAVA program to display default value of all primitive data type of JAVA.
2. Write a Java program that checks whether a given string is a palindrome or not.
Ex: MADAM is a Palindrome.
3. Write a JAVA program to implement class mechanism. Create a class, methods and invoke them inside main method.
4. Write a JAVA program to implement constructor overloading.
5. Write a JAVA program implement method overloading.
6. Write a JAVA program to implement multi level Inheritance
7. Write a JAVA program give example for “super” keyword.
8. Write java program to create a super class called Figure that receives the dimensions of two-dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub class overridden area() so that it returns the area of a rectangle and a triangle respectively.
9. Write a JAVA program for abstract class to find areas of different shapes.
10. Write a JAVA program to implement Interface. What kind of Inheritance can be achieved?
11. Write a JAVA program that import and use the user defined packages
12. Write a JAVA program that describes exception handling mechanism
13. a) Write a JAVA program that creates threads by extending Thread class. First thread display “Good Morning “every 1 sec, the second thread displays “Hello “every 2 seconds and the third display “Welcome” every 3 seconds,(Repeat the same by implementing Runnable)
b) Write a program illustrating is Alive and join ()
c) Write a Program illustrating Daemon Threads.
d) Write a JAVA program Producer Consumer Problem

Course Outcomes:

After completion of the course, students will be able to

- CO1: Demonstrate a solid understanding of Java syntax, including data types, control structures, methods, classes, objects, inheritance, polymorphism, and exception handling.
- CO2: Apply fundamental OOP principles such as encapsulation, inheritance, polymorphism, and abstraction to solve programming problems effectively.
- CO3: Familiar with commonly used Java Packages and exception handling in real time applications.
- CO4: Develop problem-solving skills and algorithmic thinking, applying OOP concepts to design efficient solutions to various programming challenges.
- CO5: Proficiently construct multi-threading applications.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

II Year II Semester

B. Tech II Year II Semester

23MAT108 DISCRETE MATHEMATICAL STRUCTURES

L	T	P	C
3	0	0	3

Course Prerequisite: 23MAT101

Students should have a solid understanding of high school-level algebra, including Set notions, Relations, Functions, Permutations-Combinations, equations, and inequalities.

Course Description:

Discrete Mathematical Structures is a foundational course designed to introduce students to the essential concepts and structures of discrete mathematics. This course is crucial for students in computer science, information technology, computing, and related fields, providing the mathematical framework necessary for the analysis and design of algorithms, data structures, learning and intelligent systems.

Course Objectives:

This course enables students to

1. Develop a strong foundation in propositional and predicate logic, enabling the analysis and construction of logical arguments and proofs.
2. Master various counting techniques and understand the properties of algebraic structures such as groups and binary operations.
3. Gain a deep understanding of relations, equivalence classes, order relations, lattices, and Boolean algebras.
4. Learn to model and solve problems using sequences and recurrence relations, both homogeneous and nonhomogeneous.
5. Study the fundamental concepts of graph theory, including paths, cycles, trees, and the various types of graphs and their properties.

UNIT I LOGICAL STRUCTURES

9 hours

Introduction- Propositions and Truth Values- Logical Connectives and Truth Tables-Tautologies and Contradictions -Logical Equivalence and Logical Implication -The Algebra of Propositions - Arguments - Formal Proof of the Validity of Arguments -Predicate Logic - Arguments in Predicate Logic (Theory of Inference).

UNIT II COUNTING TECHNIQUES AND ALGEBRAIC STRUCTURES

9 hours

Counting Techniques- Pigeonhole principle- Inclusion-exclusion principle- Binary Operations and Their Properties- Algebraic Structures- Groups in Modular Arithmetic - Cyclic Groups- Groups of Permutations- Substructures-Morphisms.

UNIT III ORDERED STRUCTURES

9 hours

Relations and Their Representations- Equivalence Classes and Partitions- Order Relations- - Hasse Diagrams-Lattices- Properties of Lattices- Boolean Algebras – Properties of Boolean Algebras- Boolean Functions- Minimization of Boolean Expressions.

UNIT IV RECURRENCE RELATIONS

9 hours

Sequences - Recurrence Relations- Applications of Recurrence Relations- Modeling with Recurrence Relations- Solving Linear Recurrence Relations- Solving Linear Homogeneous Recurrence Relations with Constant Coefficients- Linear Nonhomogeneous Recurrence Relations with Constant Coefficients-

Generating Functions- Useful facts about Power Series- Using Generating Functions to Solve Recurrence Relations

UNIT V GRAPH STRUCTURES

9 hours

Graphs-Graph Terminology and Special Types of Graphs-Representing Graphs and Graph Isomorphism-Connectivity-Euler and Hamilton Paths-Shortest-Path Problems-Planar Graphs -Graph Coloring-Introduction to Trees-Spanning Trees-Minimum Spanning Trees.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Evaluate the elementary logical arguments and identify the fallacious reasoning for the syntax of programming languages.

CO2: Utilize counting principles in computing techniques and algorithm analysis, and learn the properties of various algebraic structures.

CO3: Analyze various types of relations, equivalence classes, partitions using Hasse diagrams, and the properties of lattices and Boolean algebra.

CO4: Apply recurrence relations to model and solve many computational problems by generating functions.

CO5: Identify the special types of graphs for analyzing the connectivity models, and also study the properties of trees.

Textbooks:

1. Rowan Garnier and John Taylor, Discrete Mathematics (Proof, Structures and Applications), CRC Press, an informa business, 3rd Edition, 2009.
2. Kenneth H. Rosen, Discrete Mathematics and its applications, 6th Edition, Tata McGraw Hill, 2011.

Reference Books:

2. U.S. Gupta, “Discrete Mathematical Structures”, 1st Edition, Pearson Education India, 2014.
3. Kevin Ferland, “Discrete Mathematical Structures”, 1st Edition, Cengage Learning, 2009.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year II Semester

23CSD103 DIGITAL LOGIC AND COMPUTER ORGANIZATION

L	T	P	C
3	0	0	3

Course Objectives:

The main objectives of the course is to

1. Provide a comprehensive understanding of digital logic design principles and computer organization fundamentals
2. Illustrate Computer Arithmetic Operations and Processor Organization
3. Explain the fundamentals of Memory and Input/output (I/O) systems

UNIT I

9 hours

Data Representation: Signed and Unsigned Binary Arithmetic – Fixed and Floating Point Binary Number representations – Hamming Code - Error Detection and Correction

Digital Logic & Combinational Circuits: Boolean Algebra, Minimization of Logic expressions, Quine–McCluskey Method - K-Map Simplification - Combinational Circuits: - Adders, Multiplexers, De-Multiplexers, Encoders and Decoders – Code Converters

UNIT II

9 hours

Digital Logic & Sequential Circuits: Sequential Circuits, Flip-Flops, Binary counters, Registers, Shift Registers

Introduction to Computer Architecture: Computer Types, Functional units, Bus structures, Software, Technology, Computer Generations, Von- Neumann Architecture, Eight Great Ideas

UNIT III

9 hours

Computer Arithmetic: Fixed Point and Floating Point Arithmetic - Addition, Subtraction, Unsigned and Signed Multiplication, Division Algorithms - Floating Point Arithmetic Operations

Processor Organization: Fundamental Concepts, Execution of a Complete Instruction Cycle – CISC and RISC Processors – x86 and ARM Addressing Modes and Instruction set

UNIT IV

9 hours

Memory Organization: Basic Concepts, Semiconductor RAM Memories, Read-Only Memories, Speed, Size and Cost, Cache Memory, Elements of Cache – Memory Mapping Techniques, Cache Performance - Redundant Array of Independent Disks.

UNIT V

9 hours

Pipelining and Parallelism: Pipelining Strategy, Pipeline performance, Pipeline Hazards. Parallel Architecture - Flynn's classification – Multicore Architecture – Clusters – GPU Architecture

Input/output Organization: Data Transfer Schemes: - Programmed I/O, Interrupt Driven I/O, Direct Memory Access.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Demonstrate the fundamental principles of digital system design and design combinational logic circuits.

CO2: Design sequential logic circuits and explain the functional units of computer

CO3: Apply algorithms for Arithmetic Operations and understand Instruction Set Architectures

CO4: Explain memory hierarchy and Concepts of Cache

CO5: Understand the concepts of Pipelining, Parallelism and I/O

Textbooks:

1. Computer Organization, Carl Hamacher, Zvonko Vranesic, Safwat Zaky, 6th edition, McGraw Hill
2. William Stallings, “Computer Organization and Architecture Designing for Performance”, 11th Edition, Pearson Publications.
3. Digital Design, 6th Edition, M. Morris Mano, Pearson Education.

Reference Books:

1. Computer Systems Architecture, M. Moris Mano, 3rd Edition, Pearson
2. Computer Organization and Design, David A. Paterson, John L. Hennessy, Elsevier
3. Fundamentals of Logic Design, Roth, 5th Edition, Thomson

Online Learning Resources

1. <https://nptel.ac.in/courses/106/103/106103068/>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year II Semester

23CSD105 INTRODUCTION TO DATA SCIENCE

L T P C

3 0 0 3

Course Objectives:

From the course the student will learn

1. Knowledge and expertise to become a data scientist.
2. Essential concepts of statistics and machine learning that are vital for data science.
3. Significance of exploratory data analysis (EDA) in data science.
4. Critically evaluate data visualizations presented on the dashboards
5. Suitability and limitations of tools and techniques related to data science process

UNIT I

9 hours

Introduction to Data science, benefits and uses, facets of data, data science process in brief, big data ecosystem and data science

Data Science process: Overview, defining goals and creating project charter, retrieving data, cleansing, integrating and transforming data, exploratory analysis, model building, presenting findings and building applications on top of them

UNIT II

9 hours

Applications of machine learning in Data science, role of ML in DS, Python tools like sklearn, modelling process for feature engineering, model selection, validation and prediction, types of ML, semi-supervised learning

Handling large data: problems and general techniques for handling large data, programming tips for dealing large data, case studies on DS projects for predicting malicious URLs, for building recommender systems

UNIT III

9 hours

NoSQL movement for handling Bigdata: Distributing data storage and processing with Hadoop framework, case study on risk assessment for loan sanctioning, ACID principle of relational databases, CAP theorem, base principle of NoSQL databases, types of NoSQL databases, case study on disease diagnosis and profiling

UNIT IV

9 hours

Tools and Applications of Data Science: Introducing Neo4j for dealing with graph databases, graph query language Cypher, Applications graph databases, Python libraries like nltk and SQLite for handling Text mining and analytics, case study on classifying Reddit posts

UNIT V

9 hours

Data Visualization and Prototype Application Development: Data Visualization options, Crossfilter, the JavaScript MapReduce library, Creating an interactive dashboard with dc.js, Dashboard development tools.

Applying the Data Science process for real world problem solving scenarios as a detailed case study.

Course Outcomes:

After completion of the course, students will be able to

CO1: Understand the fundamental concepts and applications of data science.

CO2: Apply machine learning techniques to solve data science problems.

CO3: Compare and contrast relational and NoSQL databases.

CO4: Utilize graph databases for data analysis.

CO5: Create interactive data visualizations.

Textbooks:

1. Davy Cielen, Arno D.B.Meysman, and Mohamed Ali, “Introducing to Data Science using Python tools”, Manning Publications Co, Dreamtech press, 2016
2. Prateek Gupta, “Data Science with Jupyter” BPB publishers, 2019 for basics

1. Joel Grus, “Data Science From Scratch”, OReilly, 2019
2. Doing Data Science: Straight Talk From The Frontline, 1 st Edition, Cathy O’Neil and Rachel Schutt, O’Reilly, 2013

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year II Semester

23CSD106 DATA ENGINEERING

L T P C

3 0 0 3

Course Objectives:

1. Explain basic concepts of Data Engineering
2. Discuss about Data Engineering Life Cycle
3. How to design Good Data Architecture

UNIT I

9 hours

Introduction to Data Engineering: Definition, Data Engineering Life Cycle, Evolution of Data Engineer, Data Engineering Versus Data Science, Data Engineering Skills and Activities, Data Maturity, Data Maturity Model, Skills of a Data Engineer, Business Responsibilities, Technical Responsibilities, Data Engineers and Other Technical Roles

UNIT II

9 hours

Data Engineering Life Cycle: Data Life Cycle Versus Data Engineering Life Cycle, Generation: Source System, Storage, Ingestion, Transformation, Serving Data.

Major undercurrents across the Data Engineering Life Cycle: Security, Data Management, DataOps, Data Architecture, Orchestration, Software Engineering.

UNIT III

9 hours

Designing Good Data Architecture: Enterprise Architecture, Data Architecture, Principles of Good Data Architecture, Major Architecture Concepts.

Data Generation in Source Systems: Sources of Data, Files and Unstructured Data, APIs, Application Databases (OLTP), OLAP, Change Data Capture, Logs, Database Logs, CRUD, Source System Practical Details

UNIT IV

9 hours

Storage: Raw Ingredients of Data Storage, Data Storage Systems, Data Engineering Storage Abstractions, Data warehouse, Data Lake, Data Lakehouse.

Ingestion: Data Ingestion, Key Engineering considerations for the Ingestion Phase, Batch Ingestion Considerations, Message and Stream Ingestion Considerations, Ways to Ingest Data

UNIT V

9 hours

Queries, Modeling and Transformation: Queries, Life of a Query, Query Optimizer, Queries on Streaming Data, Data Modelling, Modeling Streaming Data, Transformations, Streaming Transformations and Processing.

Serving Data for Analytics, Machine Learning and Reverse ETL: General Considerations for serving Data, Business Analytics, Operational Analytics, Embedded Analytics, Ways to serve data for analytics and ML, Reverse ETL

Course Outcomes:

After completion of the course, students will be able to

- CO1: Understand data engineering fundamentals, differentiate from data science, and identify key data engineer roles and responsibilities.
- CO2: Grasp the data engineering lifecycle, including security, management, and operational aspects.
- CO3: Design effective data architectures based on data sources, models, and architectural principles.
- CO4: Select optimal storage and ingestion methods for efficient data pipelines.
- CO5: Master querying, modeling, and transformation techniques to deliver valuable data products.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech II Year II Semester

23CSD203 DATA SCIENCE LABORATORY

L	T	P	C
0	0	3	1.5

Course Objectives:

- The main objective of the course is to inculcate the basic understanding of Data Science and its practical implementation using Python

List of Experiments

1. Creating a NumPy Array
 - a. Basic ndarray
 - b. Array of zeros
 - c. Array of ones
 - d. Random numbers in ndarray
 - e. An array of your choice
 - f. Imatrix in NumPy
 - g. Evenly spaced ndarray
2. The Shape and Reshaping of NumPy Array
 - a. Dimensions of NumPy array
 - b. Shape of NumPy array
 - c. Size of NumPy array
 - d. Reshaping a NumPy array
 - e. Flattening a NumPy array
 - f. Transpose of a NumPy array
3. Expanding and Squeezing a NumPy Array
 - a. Expanding a NumPy array
 - b. Squeezing a NumPy array
 - c. Sorting in NumPy Arrays
4. Indexing and Slicing of NumPy Array
 - a. Slicing 1-D NumPy arrays
 - b. Slicing 2-D NumPy arrays
 - c. Slicing 3-D NumPy arrays
 - d. Negative slicing of NumPy arrays
5. Stacking and Concatenating Numpy Arrays
 - a. Stacking ndarrays
 - b. Concatenating ndarrays
 - c. Broadcasting in Numpy Arrays
6. Perform following operations using pandas
 - a. Creating dataframe
 - b. concat()
 - c. Setting conditions

- d. Adding a new column
 - 7. Perform following operations using pandas
 - a. Filling NaN with string
 - b. Sorting based on column values
 - c. groupby()
 - 8. Read the following file formats using pandas
 - a. Text files
 - b. CSV files
 - c. Excel files
 - d. JSON files
 - 9. Read the following file formats
 - a. Pickle files
 - b. Image files using PIL
 - c. Multiple files using Glob
 - d. Importing data from database
 - 10. Demonstrate web scraping using python
 - 11. Perform following preprocessing techniques on loan prediction dataset
 - a. Feature Scaling
 - b. Feature Standardization
 - c. Label Encoding
 - d. One Hot Encoding
 - 12. Perform following visualizations using matplotlib
 - a. Bar Graph
 - b. Pie Chart
 - c. Box Plot
 - d. Histogram
 - e. Line Chart and Subplots
 - f. Scatter Plot
 - 13. Getting started with NLTK, install NLTK using PIP
 - 14. Python program to implement with Python Sci Kit-Learn & NLTK
- Python program to implement with Python NLTK/Spicy/Py NLPI

Course Outcomes:

After completion of the course, students will be able to

CO1; Master NumPy and Pandas for efficient data manipulation and computation.

CO2; Excel at data import, cleaning, preparation, and web scraping.

CO3: Create effective data visualizations using Matplotlib.

CO4: Grasp foundational machine learning concepts and data preparation techniques.

CO5: Develop a solid understanding of Natural Language Processing (NLP) fundamentals.

23CSD204 DATA ENGINEERING LABORATORY

L	T	P	C
0	0	3	1.5

Course Objectives:

- The main objective of this course is to teach how build data engineering infrastructure and data pipelines

Experiments:

1. Installing and configuring Apache NiFi, Apache Airflow
2. Installing and configuring Elasticsearch, Kibana, PostgreSQL, pgAdmin
3. Reading and Writing files
 - a. Reading and writing files in Python
 - b. Processing files in Airflow
 - c. NiFi processors for handling files
 - d. Reading and writing data to databases in Python
 - e. Databases in Airflow
 - f. Database processors in NiFi
4. Working with Databases
 - a. Inserting and extracting relational data in Python
 - b. Inserting and extracting NoSQL database data in Python
 - c. Building database pipelines in Airflow
 - d. Building database pipelines in NiFi
5. Cleaning, Transforming and Enriching Data
 - a. Performing exploratory data analysis in Python
 - b. Handling common data issues using pandas
 - c. Cleaning data using Airflow
6. Building the Data Pipeline
7. Building a Kibana Dashboard
8. Perform the following operations
 - a. Staging and validating data
 - b. Building idempotent data pipelines
 - c. Building atomic data pipelines
9. Version Control with the NiFi Registry
 - a. Installing and configuring the NiFi Registry
 - b. Using the Registry in NiFi
 - c. Versioning your data pipelines
 - d. Using git-persistence with the NiFi Registry
10. Monitoring Data Pipelines

- a. Monitoring NiFi in the GUI
 - b. Monitoring NiFi using processors
 - c. Monitoring NiFi with Python and the REST API
11. Deploying Data Pipelines
- a. Finalizing your data pipelines for production
 - b. Using the NiFi variable registry
 - c. Deploying your data pipelines
12. Building a Production Data Pipeline
- a. Creating a test and production environment
 - b. Building a production data pipeline
 - c. Deploying a data pipeline in production

Course Outcomes:

At the end of the course student will be able to:

- CO1: Master data engineering fundamentals using NiFi, Airflow, Python, and databases.
- CO2: Build robust, efficient, and reliable data pipelines for various data scenarios.
- CO3: Utilize cloud-native technologies for data exploration, visualization, and monitoring.
- CO4: Implement effective data governance strategies for data versioning, metadata management, and pipeline lifecycle management.
- CO5: Optimize data pipeline performance and scalability for handling increasing data volumes and complexity

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech II Year II Semester

Audit Course

23CHE901 ENVIRONMENTAL SCIENCE

L	T	P	C
2	0	0	0

Course Objectives:

This course enables students to

1. To make the students to get awareness of the environment.
2. To understand the importance of protecting natural resources, ecosystems for future generations and pollution causes due to the day-to-day activities of human life
3. To save the earth from the inventions by the engineers.

UNIT I MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES 6 hours

Definition, Scope, and Importance – Need for Public Awareness.

Natural Resources: Energy resources- Renewable and non-renewable resources – Natural resources and associated problems – Forest resources – Use and over – exploitation, deforestation, case studies – Timber extraction – Mining, dams and other effects on forest and tribal people – Water resources – Use and over utilization of surface and ground water – Floods, drought, conflicts over water, dams – benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

UNIT II ECOSYSTEMS 7 hours

Concept of an ecosystem. – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Ecological succession – Food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the following ecosystem:

- a) Forest ecosystem.
- b) Grassland ecosystem
- c) Desert ecosystem.
- d) Aquatic ecosystems (freshwater - ponds, streams, lakes, rivers, marine ecosystem- oceans, estuaries)

Biodiversity and its Conservation : Introduction, Definition: genetic, species and ecosystem diversity – Bio-geographical classification of India – Value of biodiversity: consumptive use, Productive use, social, ethical, aesthetic and option values – Biodiversity at global, National and local levels – India as a mega-diversity nation – Hot-spots of biodiversity – Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – Endangered and endemic species of India – Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity. Specific case studies.

UNIT III ORDERED STRUCTURES 6 hours

Definition, Cause, effects, and control measures of:

Air Pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, nuclear hazards

Pollution case studies - Role of an individual in the prevention of pollution

Solid Waste Management: Causes, effects and control measures of urban and industrial wastes

Disaster management: floods, earthquakes, cyclones and landslides.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT

5 hours

Sustainable Development Goals, From Unsustainable to Sustainable development – Urban problems related to energy – Water conservation, rainwater harvesting, watershed management – Resettlement and rehabilitation of people; its problems and concerns. Case studies – Environmental ethics: Issues and possible solutions – Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents, and holocaust. Case Studies – Wasteland reclamation. – Consumerism and waste products. Environment Protection Act. – Air (Prevention and Control of Pollution) Act. – Water (Prevention and Control of Pollution) Act – Wildlife Protection Act – Forest Conservation Act – Issues involved in enforcement of environmental legislation – Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

6 hours

Population growth, variation among nations. Population explosion – Family Welfare Programmes. – Environment and human health – Human Rights – Value Education – HIV/AIDS – Women and Child Welfare – Role of Information Technology in Environment and human health – Case studies.

Field Work: Visit a local area to document environmental assets River/forest grassland/hill/mountain – Polluted site - Urban/Rural/Industrial/Agricultural Study of common plants, insects, and birds – river, hill slopes.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Exploring different types of renewable and non-renewable energy sources.

CO2: Students will learn about the structure and function of different ecosystems.

CO3: Students will learn about different types of pollution (air, water, soil) and their sources, effects, and control measures.

CO4: Exploring the science behind climate change, its evidence, and its impacts on ecosystems and human societies.

CO5: Understanding demographic factors and their environmental implications.

III Year I Semester

B. Tech III Year I Semester

23CSD107 INTRODUCTION TO MACHINE LEARNING

L	T	P	C
3	0	0	3

Pre-requisite: Programming proficiency in Python, Linear Algebra and Probability & Statistics

Course Description:

This course introduces students to the foundational concepts and techniques of Machine Learning. It covers various learning paradigms including supervised, unsupervised, and Bayesian learning, along with key algorithms for classification, regression, and clustering. The course also focuses on practical aspects such as data preparation, model training, evaluation, and feature engineering. Students will gain the knowledge required to build and apply machine learning models to solve real-world problems across domains.

Course Objectives:

The main objective of the course is to

1. Introduce the fundamental concepts, types, and applications of Machine Learning.
2. Understand Bayesian and supervised learning methods for classification tasks.
3. Apply regression techniques and assess model assumptions and improvements.
4. Explore unsupervised learning techniques for clustering and pattern discovery.
5. Develop skills in model evaluation and basic feature engineering for improved learning performance.

UNIT I INTRODUCTION TO MACHINE LEARNING & PREPARING TO MODEL 8 hours

Introduction: What is Human Learning? Types of Human Learning, what is Machine Learning? Types of Machine Learning, Problems Not to Be Solved Using Machine Learning, Applications of Machine Learning, State-of-The-Art Languages/Tools in Machine Learning, Issues in Machine Learning
Preparing to Model: Introduction, Machine Learning Activities, Basic Types of Data in Machine Learning, Exploring Structure of Data, Data Quality and Remediation, Data Pre-Processing

UNIT II BAYESIAN CONCEPT LEARNING & SUPERVISED LEARNING: CLASSIFICATION 12 hours

Introduction, Why Bayesian Methods are Important? Bayes' Theorem, Bayes' Theorem and Concept Learning, Bayesian Belief Network.

Supervised Learning: Classification: Introduction, Example of Supervised Learning, Classification Model, Classification Learning Steps, Common Classification Algorithms-k-Nearest Neighbour(kNN), Decision tree, Random forest model, Support vector machines

UNIT III REGRESSION 6 hours

Introduction, Example of Regression, Common Regression Algorithms-Simple linear regression, Multiple linear regression, Assumptions in Regression Analysis, Main Problems in Regression Analysis, Improving Accuracy of the Linear Regression Model, Polynomial Regression Model, Logistic Regression, Maximum Likelihood Estimation.

UNIT IV UNSUPERVISED LEARNING 6 hours

Introduction, Unsupervised vs Supervised Learning, Application of Unsupervised Learning, Clustering – Clustering as a machine learning task, Different types of clustering techniques, Partitioning methods, K- Medoids: a representative object-based technique, Hierarchical clustering, Density-based methods

DBSCAN Finding Pattern using Association Rule- Definition of common terms, Association rule, The apriori algorithm for association rule learning, Build the apriori principle rules

UNIT V MODELLING AND EVALUATION & BASICS OF FEATURE ENGINEERING 13 hours

Introduction, selecting a Model, training a Model (for Supervised Learning), Model Representation and Interpretability, Evaluating Performance of a Model, Improving Performance of a Model Basics of Feature Engineering: Introduction, Feature Transformation, Feature Subset Selection.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain the fundamentals, types, tools, and issues in machine learning.

CO2: Apply Bayesian and supervised learning methods to classification problems.

CO3: Implement regression models and evaluate their accuracy and limitations.

CO4: Analyze unsupervised learning techniques like clustering and association rules.

CO5: Select and evaluate models, and perform basic feature engineering.

B. Tech III Year I Semester

23CSD108 BIG DATA ANALYTICS

L	T	P	C
3	0	0	3

Pre-requisite: Database Management Systems (DBMS)

Course Description:

This course introduces students to the foundational concepts and technologies of Big Data and its analytics. It covers the evolution, characteristics, and challenges of Big Data, along with tools and frameworks like Hadoop, MapReduce, MongoDB, Hive, Pig, and Spark. The course emphasizes the comparison between traditional RDBMS and Big Data frameworks and equips students with the knowledge required to analyze structured, semi-structured, and unstructured data. Students will also learn about NoSQL databases and advanced analytics techniques such as text, web, and link analytics, preparing them for real-world data-intensive problem-solving.

Course Objectives:

The main objective of the course is to

1. Understand the concepts, characteristics, and importance of Big Data and analytics.
2. Explore MapReduce programming and manage data using the Hadoop ecosystem.
3. Familiarize students with data storage, retrieval, and operations using MongoDB.
4. Provide hands-on experience in developing data processing workflows using Hive and Pig.
5. Analyze large-scale data using Spark, along with text, web, and link analytics techniques.

UNIT I INTRODUCTION TO BIG DATA ANALYTICS

9 hours

Classification of data, Characteristics, Evolution and definition of Big data, What is Big data, Why Big data, Traditional Business Intelligence Vs Big Data, Typical data warehouse and Hadoop environment.

Big Data Analytics: What is Big data Analytics, Classification of Analytics, Importance of Big Data Analytics, Technologies used in Big data Environments, Few Top Analytical Tools , NoSQL, Hadoop.

UNIT II HADOOP AND MAP REDUCE FRAMEWORK

9 hours

Introduction to Hadoop: Introducing hadoop, Why hadoop, Why not RDBMS, RDBMS Vs Hadoop, History of Hadoop, Hadoop overview, Use case of Hadoop, HDFS (Hadoop Distributed File System), Processing data with Hadoop, Managing resources and applications with Hadoop YARN (Yet Another Resource Negotiator).

Introduction to Map Reduce Programming: Introduction, Mapper, Reducer, Combiner, Partitioner, Searching, Sorting, Compression.

UNIT III INTRODUCTION TO MONGODB

9 hours

Introduction to MongoDB: What is MongoDB, Why MongoDB, Terms used in RDBMS and MongoDB, Data Types in MongoDB, MongoDB Query Language.

UNIT IV DATA PROCESSING WITH HIVE AND PIG

9 hours

Introduction to Hive: What is Hive, Hive Architecture, Hive data types, Hive file formats, Hive Query Language (HQL), RC File implementation, User Defined Function (UDF).

Introduction to Pig: What is Pig, Anatomy of Pig, Pig on Hadoop, Pig Philosophy, Use case for Pig, Pig Latin Overview, Data types in Pig, Running Pig, Execution Modes of Pig, HDFS Commands, Relational Operators, Eval Function, Complex Data Types, Piggy Bank, User Defined Function, Pig Vs Hive.

UNIT V SPARK AND ADVANCED BIG DATA ANALYTICS

13 hours

Spark and Big Data Analytics: Spark, Introduction to Data Analysis with Spark.

Text, Web Content and Link Analytics: Introduction, Text Mining, Web Mining, Web Content and Usage Analytics, Page Rank, Structure of Web and Analyzing a Web Graph.

Course Outcomes:

After completing the course, students will be able to:

CO1: Explain the characteristics and importance of Big Data and its analytical value.

CO2: Implement MapReduce programs and manage datasets using the Hadoop ecosystem.

CO3: Perform data storage and retrieval operations using MongoDB.

CO4: Design and execute data workflows using Hive and Pig for analysis.

CO5: Analyze large datasets using Spark and apply text, web, and link analytics.

B. Tech III Year I Semester

23CSD109 SOFTWARE ENGINEERING

L	T	P	C
3	0	0	3

Pre-requisite: Programming Fundamentals

Course Description:

This course introduces students to the systematic engineering principles used in the development of high-quality software systems. It covers the complete software development life cycle (SDLC) including requirement gathering, software design methodologies (structured and object-oriented), coding standards, software testing techniques, and quality assurance. The course also addresses project planning, estimation models, software metrics, maintenance strategies, and tools for software development. Students will gain both theoretical insights and practical skills required for building reliable and scalable software systems, preparing them for professional software engineering practices.

Course Objectives:

The main objectives of the course is to

1. To learn the basic concepts of software engineering and life cycle models
2. To explore the issues in software requirements specification and enable to write SRS documents for software development problems
3. To elucidate the basic concepts of software design and enable to carry out procedural and object oriented design of software development problems
4. To understand the basic concepts of black box and white box software testing and enable to design test cases for unit, integration, and system testing
5. To reveal the basic concepts in software project management

UNIT I BASIC CONCEPTS IN SOFTWARE ENGINEERING AND SOFTWARE PROJECT MANAGEMENT LECTURE 8 hours

Basic concepts: abstraction versus decomposition, evolution of software engineering techniques, Software development life cycle (SDLC) models: Iterative waterfall model, Prototype model, Evolutionary model, Spiral model, RAD model, Agile models, software project management: project planning, project estimation, COCOMO, Halstead's Software Science, project scheduling, staffing, Organization and team structure, risk management, configuration management.

UNIT II REQUIREMENTS ANALYSIS AND SPECIFICATION 8 hours

The nature of software, The Unique nature of Webapps, Software Myths, Requirements gathering and analysis, software requirements specification, Traceability, Characteristics of a Good SRS Document, IEEE 830 guidelines, representing complex requirements using decision tables and decision trees, overview of formal system development techniques, axiomatic specification, algebraic specification.

UNIT III SOFTWARE DESIGN 9 hours

Good Software Design, Cohesion and coupling, Control Hierarchy: Layering, Control Abstraction, Depth and width, Fan-out, Fan-in, Software design approaches, object oriented vs. function oriented design. Overview of SA/SD methodology, structured analysis, Data flow diagram, Extending DFD technique to real life systems, Basic Object oriented concepts, UML Diagrams, Structured design, Detailed design, Design review, Characteristics of a good user interface, User Guidance and Online Help, Mode-based vs Mode-less Interface, Types of user interfaces, Component-based GUI development, User interface design methodology: GUI design methodology.

UNIT IV CODING AND TESTING

9 hours

Coding standards and guidelines, code review, software documentation, Testing, Black Box Testing, White Box Testing, debugging, integration testing, Program Analysis Tools, system testing, performance testing, regression testing, Testing Object Oriented Programs.

UNIT V SOFTWARE QUALITY, RELIABILITY, AND OTHER ISSUES

9 hours

Software reliability, Statistical testing, Software quality and management, ISO 9000, SEI capability maturity model (CMM), Personal software process (PSP), Six sigma, Software quality metrics, CASE and its scope, CASE environment, CASE support in software life cycle, Characteristics of software maintenance, Software reverse engineering, Software maintenance processes model, Estimation maintenance cost. Basic issues in any reuse program, Reuse approach, Reuse at organization level.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Obtain basic software life cycle activity skills.

CO2: Design software requirements specifications for given problems.

CO3: Implement structure, object oriented analysis and design for given problems.

CO4: Design test cases for given problems.

CO5: Apply quality management concepts at the application level.

Textbooks:

1. Rajib Mall, “Fundamentals of Software Engineering”, 5th Edition, PHI, 2018.
2. Pressman R, “Software Engineering- Practioner Approach”, McGraw Hill.

B. Tech III Year I Semester

23PHY102 INTRODUCTION TO QUANTUM TECHNOLOGIES AND APPLICATIONS

L	T	P	C
3	0	0	3

Pre-requisite: None

Course Objectives:

The main objective of the course is to

1. Introduce fundamental quantum concepts like superposition and entanglement.
2. Understand theoretical structure of qubits and quantum information.
3. Explore conceptual challenges in building quantum computers.
4. Explain principles of quantum communication and computing.
5. Examine real-world applications and the future of quantum technologies.

UNIT I INTRODUCTION TO QUANTUM THEORY AND TECHNOLOGIES 9 hours

The transition from classical to quantum physics, Fundamental principles explained conceptually: Superposition, Entanglement, Uncertainty Principle, Wave-particle duality, Classical vs Quantum mechanics – theoretical comparison, Quantum states and measurement: nature of observation, Overview of quantum systems: electrons, photons, atoms, The concept of quantization: discrete energy levels, Why quantum? Strategic, scientific, and technological significance, A snapshot of quantum technologies: Computing, Communication, and Sensing, National and global quantum missions: India's Quantum Mission, EU, USA, China

UNIT II THEORETICAL STRUCTURE OF QUANTUM INFORMATION SYSTEMS 9 hours

What is a qubit? Conceptual understanding using spin and polarization, Comparison: classical bits vs quantum bits, Quantum systems: trapped ions, superconducting circuits, photons (non-engineering view), Quantum coherence and decoherence – intuitive explanation, Theoretical concepts: Hilbert spaces, quantum states, operators – only interpreted in abstract, The role of entanglement and non-locality in systems, Quantum information vs classical information: principles and differences, Philosophical implications: randomness, determinism, and observer role

UNIT III BUILDING A QUANTUM COMPUTER – THEORETICAL CHALLENGES AND REQUIREMENTS 9 hours

What is required to build a quantum computer (conceptual overview)?, Fragility of quantum systems: decoherence, noise, and control, Conditions for a functional quantum system: Isolation, Error management, Scalability, Stability, Theoretical barriers:

Why maintaining entanglement is difficult, Error correction as a theoretical necessity, Quantum hardware platforms (brief conceptual comparison), Superconducting circuits, Trapped ions, Photonics, Vision vs reality: what's working and what remains elusive, The role of quantum software in managing theoretical complexities

UNIT IV QUANTUM COMMUNICATION AND COMPUTING – 9 hours
THEORETICAL PERSPECTIVE

Quantum vs Classical Information, Basics of Quantum Communication, Quantum Key Distribution (QKD), Role of Entanglement in Communication, The Idea of the Quantum Internet – Secure Global Networking, Introduction to Quantum Computing, Quantum Parallelism (Many States at Once), Classical vs Quantum Gates, Challenges: Decoherence and Error Correction, Real-World Importance and Future Potential

UNIT V APPLICATIONS, USE CASES, AND THE QUANTUM 9 hours
FUTURE

Real-world application domains: Healthcare (drug discovery), Material science, Logistics and optimization, Quantum sensing and precision timing, Industrial case studies: IBM, Google, Microsoft, PsiQuantum, Ethical, societal, and policy considerations, Challenges to adoption: cost, skills, standardization, Emerging careers in quantum: roles, skillsets, and preparation pathways, Educational and research landscape – India's opportunity in the global quantum race

Course Outcomes:

CO1: Explain core quantum principles in a non-mathematical manner.

CO2: Compare classical and quantum information systems.

CO3: Identify theoretical issues in building quantum computers.

CO4: Discuss quantum communication and computing concepts.

CO5: Recognize applications, industry trends, and career paths in quantum technology.

B. Tech III Year I Semester

23CSD205 INTRODUCTION TO MACHINE LEARNING LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite: Python Programming, Linear Algebra and Statistics

Course Description:

This course provides hands-on experience in implementing key machine learning algorithms and techniques using real-world datasets. Students will explore supervised and unsupervised learning methods, including classification, regression, clustering, and Bayesian models. The course emphasizes understanding algorithmic workflows, evaluating model performance, and applying machine learning to practical problems such as document classification and medical diagnosis. Through programming assignments and experiments, students will gain the practical skills needed to build, test, and analyze machine learning models.

Course Objectives:

The objectives of the course are to

1. Make use of Data sets in implementing the machine learning algorithms
2. Implement the machine learning concepts and algorithms in any suitable language of choice.

List of Experiments:

Note:

- a. The programs can be implemented in either JAVA or Python.
 - b. For Problems 1 to 6 and 10, programs are to be developed without using the built-in classes or APIs of Java/Python.
 - c. Data sets can be taken from standard repositories (<https://archive.ics.uci.edu/ml/datasets.html>) or constructed by the students.
1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
 2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
 3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
 4. Implement and evaluate Polynomial Regression and Logistic Regression models using appropriate datasets. Visualize the results and compare their performance.
 5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
 6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
 7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
 8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of

clustering. You can add Java/Python ML library classes/API in the program.

9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

Projects

1. Predicting the Sale price of a house using Linear regression
2. Spam classification using Naïve Bayes algorithm
3. Predict car sale prices using Artificial Neural Networks
4. Predict Stock market trends using LSTM
5. Detecting faces from image

Course Outcomes:

After completion of the course, Students will be able to

- CO1: Understand the Mathematical and statistical perspectives of machine learning algorithms through python programming
- CO2: Appreciate the importance of visualization in the data analytics solution.
- CO3: Derive insights using Machine learning algorithms

L	T	P	C
0	0	3	1.5

Pre-requisite: Programming in Java or Python, Data Structure & Algorithms, Computer Architecture, Operating System, Database Management Systems

Course Description:

This course provides hands-on experience with Big Data tools and technologies used to store, process, and analyze large-scale datasets. Students will work with the Hadoop ecosystem, including HDFS, MapReduce, Hive, Pig, and Spark, as well as NoSQL databases like MongoDB. The course emphasizes real-world data analysis through scripting and programming in distributed environments. It also introduces basic machine learning tasks using Spark's MLlib and SQL-based analytics tools for deriving insights from unstructured and semi-structured data

Course Objectives:

The objectives of the course are to

1. Introduce students to Big Data tools and distributed computing environments.
2. Enable students to implement MapReduce programs for data processing.
3. Familiarize students with NoSQL operations using MongoDB.
4. Provide hands-on experience in Hive and Pig for analyzing large datasets.
5. Expose students to Spark for performing scalable data analytics and machine learning.

List of Experiments:

1. Install Hadoop and Implement the following file management tasks in Hadoop:
 - Adding files and directories
 - Retrieving files
 - Deleting files and directories.

Hint: A typical Hadoop workflow creates data files (such as log files) elsewhere and copies them into HDFS using one of the above command line utilities.
2. Develop a MapReduce program to implement Matrix Multiplication.
3. Develop a Map Reduce program that mines weather data and displays appropriate messages indicating the weather conditions of the day.
4. Develop a MapReduce program to find the tags associated with each movie by analyzing movie lens data.
5. Implement Functions: Count – Sort – Limit – Skip – Aggregate using MongoDB
6. Write Pig Latin scripts to sort, group, join, project, and filter the data.
7. Use Hive to create, alter, and drop databases, tables, views, functions, and indexes.
8. Implement a word count program in Hadoop and Spark.
9. Use CDH (Cloudera Distribution for Hadoop) and HUE (Hadoop User Interface) to analyze data and generate reports for sample datasets.
10. Perform sentiment analysis on a given dataset using Spark's MLlib or Spark SQL to classify reviews as positive or negative. (Dataset: Use the IMDb Movie Reviews Dataset or the Twitter Sentiment Analysis Dataset).

Course Outcomes:

After completion of the course, Students will be able to

CO1: Set up and manage the Hadoop Distributed File System (HDFS).

CO2: Develop MapReduce programs for processing structured and semi-structured data.

CO3: Perform CRUD and aggregation operations using MongoDB.

CO4: Design and execute data processing scripts using Hive and Pig.

CO5: Implement data analytics using Spark and analyze text data for sentiment or pattern recognition

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech III Year I Semester

23ENG901 TECHNICAL PAPER WRITING AND IPR

L	T	P	C
2	0	0	0

Pre-requisite: None

Course Objectives:

1. To enable the students to practice the basic skills of research paper writing
2. To make the students understand the importance of IP and to educate them on the basic concepts of Intellectual Property Rights.
3. To practice the basic skills of performing quality literature review
4. To help them in knowing the significance of real life practice and procedure of Patents.
5. To enable them learn the procedure of obtaining Patents, Copyrights, & Trade Marks

UNIT I

6 hours

Principles of Technical Writing: styles in technical writing; clarity, precision, coherence and logical sequence in writing-avoiding ambiguity- repetition, and vague language - highlighting your findings-discussing your limitations -hedging and criticizing -plagiarism and paraphrasing.

UNIT II

6 hours

Technical Research Paper Writing: Abstract- Objectives-Limitations-Review of Literature- Problems and Framing Research Questions- Synopsis

UNIT III

6 hours

Process of research: publication mechanism: types of journals- indexing- seminars- conferences- proof reading –plagiarism style; seminar & conference paper writing; Methodology-discussion-results-citation rules.

UNIT IV

6 hours

Introduction to Intellectual property: Introduction, types of intellectual property, International organizations, ncies and treaties, importance of intellectual property rights

de Marks: Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting evaluating trade mark, trade mark registration processes.

UNIT V

6 hours

Law of copy rights: Fundamentals of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law

Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer. Patent law, intellectual property audits.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Identify key secondary literature related to their proposed technical paper writing.

CO2: Explain various principles and styles in technical writing

CO3: Use the acquired knowledge in writing a research/technical paper

CO4: Analyse rights and responsibilities of the holder of Patent, Copyright, Trademark, International Trademark etc.

CO5: Evaluate different forms of IPR available at National & international levels

CO6: Develop skill of making search of various forms of IPR by using dern tools and techniques.

B. Tech III Year II Semester

23CSD110 DEEP LEARNING

L	T	P	C
3	0	0	3

Pre-requisite Linear Algebra, Probability and Statistics, Calculus, Machine Learning Fundamentals.

Course Description:

This course introduces the fundamentals of Deep Learning, covering neural models, learning algorithms, and optimization techniques. It traces the evolution from perceptrons to multilayer and feedforward neural networks. The course explores regularization strategies and advanced architectures such as Convolutional and Recurrent Neural Networks. Students will gain the ability to design, train, and evaluate deep learning models for real-world applications.

Course Objectives:

This course enables students to

1. Understand the fundamental concepts and historical development of deep learning, including neuron models, perceptrons, and multilayer perceptrons
2. Analyze and implement feedforward neural networks using backpropagation and various gradient descent optimization techniques.
3. Apply regularization and optimization strategies to improve model generalization and address issues such as overfitting and bias–variance tradeoff.
4. Explain and utilize convolutional neural network architectures and understand their role in computer vision tasks.
5. Model and train sequential data using recurrent neural networks, including advanced architectures like LSTM and GRU, while handling gradient-related challenges.

UNIT I INTRODUCTION TO DEEP LEARNING

9 hours

Introduction: Historical Trends in Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons, Perceptron Learning Algorithm. Representation Power of MLPs, Sigmoid Neurons, Gradient Descent.

UNIT II FEEDFORWARD NEURAL NETWORKS

9 hours

Feed Forward Neural Networks, Representation Power of Feed forward Neural Networks, Back propagation, Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMS Prop, Adam.

UNIT III REGULARIZATION AND OPTIMIZATION

9 hours

Regularization: Bias Variance Tradeoff, L2 regularization, Early stopping, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Ensemble methods, Dropout, Greedy Layer wise Pre-training, Better activation functions, Better weight initialization methods, Batch Normalization

UNIT IV CONVOLUTIONAL NEURAL NETWORK

9 hours

Convolutional Neural Network: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Innately Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types. LeNet, AlexNet, VGGNet, GoogLeNet, ResNet, Visualizing Convolutional Neural Networks, Guided Back propagation.

UNIT V RECURRENT NEURAL NETWORK

9 hours

Recurrent Neural Networks, Back propagation through time (BPTT), Vanishing and Exploding Gradients, Truncated BPTT, GRU, LSTMs.

Course Outcomes:

At the end of the course, students will be able to

CO1: Explain the working principles of basic neural models.

CO2: Implement and compare different training algorithms for feedforward neural networks

CO3: Evaluate and apply regularization and optimization techniques

CO4: Design and analyze convolutional neural network architectures and interpret CNN behavior using visualization techniques.

CO5: Develop and train recurrent neural network models for sequence learning tasks, addressing vanishing and exploding gradients using LSTM and GRU architectures.

B. Tech III Year II Semester

23CSD111 PREDICTIVE ANALYTICS

L T P C
3 0 0 3

Pre-requisite: Basic Probability and Statistics, Python or R Programming, Machine Learning fundamentals

Course Description:

This course provides an overview of predictive analytics techniques and their real-world applications. Students will learn to prepare data, build and evaluate predictive models using algorithms like decision trees, logistic regression, and ensemble methods. The course also introduces text mining and model deployment through practical case studies.

Course Objectives:

The main objectives of the course is to

1. Introduce the foundational concepts and workflows of Predictive Analytics.
2. Illustrate real-world use cases and applications across different domains.
3. Demonstrate the process of building, evaluating, and deploying predictive models using various algorithms.
4. Explore ensemble techniques and text mining for advanced predictive tasks.
5. Familiarize students with performance metrics and model interpretation techniques.

UNIT I OVERVIEW OF PREDICTIVE ANALYTICS

10 hours

What Is Analytics? What Is Predictive Analytics? Business Intelligence Predictive Analytics vs. Business Intelligence, Predictive Analytics vs. Statistics, Predictive Analytics vs. Data Mining, Who Uses Predictive Analytics? , Challenges in Using Predictive Analytics, What Educational Background Is Needed to Become a Predictive Modeler?

Setting Up the Problem: Predictive Analytics Processing Steps: CRISP-DM, Business Understanding, Defining Data for Predictive Modelling, Defining the Target Variable, Defining Measures of Success for Predictive Models, Doing Predictive Modelling Out of Order, Case study- Recovering Lapsed Donors, Fraud Detection

UNIT II DATA UNDERSTANDING

9 hours

What the Data Looks Like, Single Variable Summaries, Data Visualization in One Dimension, Histograms, Multiple Variable Summaries, Data Visualization, Two or Higher Dimensions, The Value of Statistical Significance, Pulling It All Together into a Data Audit.

Data Preparation: Variable Cleaning, Feature Creation.

UNIT III ITEM SETS AND ASSOCIATION RULES

9 hours

Terminology, Parameter Settings, How the Data Is Organized, Measures of Interesting Rules, Deploying Association Rules, Problems with Association Rules, Building Classification Rules from Association Rules. Descriptive Modelling: Data Preparation Issues with Descriptive Modelling, Principal Component Analysis, Clustering Algorithms.

Interpreting Descriptive Models: Standard Cluster Model Interpretation.

UNIT IV PREDICTIVE MODELLING

9 hours

Decision Trees, Logistic Regression, Neural Networks, K-Nearest Neighbour, Naïve Bayes, Regression Models, Linear Regression, Other Regression Algorithms.

Assessing Predictive Models: Batch Approach to Model Assessment, Assessing Regression Models.

UNIT V MODEL ENSEMBLES

9 hours

Motivation for Ensembles, Bagging, Boosting, Improvements to Bagging and Boosting, Model Ensembles and Occam's Razor, Interpreting Model Ensembles.

Text Mining: Motivation for Text Mining, A Predictive Modelling Approach to Text Mining, structured vs. Unstructured Data, Why Text Mining Is Hard, Data Preparation Steps, Text Mining Features, Modelling with Text Mining Features, Regular Expressions.

Model Deployment: General Deployment Considerations.

Case Studies: Survey Analysis Case Study, Help Desk Case Study.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Visualize and explore data to understand relationships and patterns.

CO2: Understand and explain how ensemble models improve prediction accuracy.

CO3: Organize and structure the predictive modelling pipeline and data preparation workflow.

CO4: Apply suitable predictive models like Decision Trees, Logistic Regression, and Neural Networks.

CO5: Evaluate model performance using appropriate statistical and business metric.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

B. Tech III Year II Semester

23CSD112 DATA VISUALIZATION

L	T	P	C
3	0	0	3

Pre-requisite: Exploratory Data Analysis.

Course Description:

This course introduces the principles and practices of data visualization to enable effective communication of data insights. Students will learn to abstract, map, and visualize data using statistical charts, multivariate techniques, and interactive dashboards. The course covers scalar, vector, temporal, and spatial data visualization, and includes hands-on experience with industry-standard tools like Tableau and Power BI. It emphasizes analytical thinking, visual storytelling, and dashboard design for domains such as finance, healthcare, and marketing.

Course Objectives:

The main objectives of the course is to

1. Introduce the fundamentals of data visualization and visual encoding techniques.
2. Explore various visualization techniques for structured, unstructured, and temporal data.
3. Understand multivariate and analytical visualizations using trees, maps, and networks.
4. Develop skills in creating effective visualizations using Tableau and Power BI.
5. Apply storytelling principles to design dashboards for domain-specific decision-making.

UNIT I INTRODUCTION TO DATA VISUALIZATION AND STATISTICAL CHARTS 9 hours

Overview of data visualization, Data Abstraction and Task Abstraction, Dimensions and Measures, Four levels for analytical validation, Statistical charts and their use cases: Bar chart, stacked bar chart, line chart, histogram, pie chart, box plot, scatter plot, frequency polygon, regression curves, Types of visualization tools

UNIT II VISUALIZATION TECHNIQUES AND DATA TYPES 9 hours

Scalar and point-based visualization techniques, Vector visualization techniques, Multidimensional visualization techniques, Cluster visualization: K-means and Hierarchical clustering, Visualizing: Time-series data, Text data
Spatial data.

UNIT III VISUAL ANALYTICS AND MULTIVARIATE DATA VISUALIZATION 9 hours

Networks and trees, Heat maps and treemaps, Manipulating view using map color and channels, Visual attributes for effective interpretation, Multivariate techniques: Geometric projection, Pixel-oriented and icon-based techniques, Scatterplot matrix, hyperbox, parallel coordinates, trellis displays

UNIT IV DATA VISUALIZATION WITH TABLEAU AND POWER BI 9 hours

Introduction to Visualization Tools, Tableau essentials: Marks, channels, arranging tables, facets, Power BI essentials: Workspace, Power Query, fields, charts, visuals, Design principles in visualization: choosing the right chart, layout, interactivity, and optimization.

UNIT V DASHBOARD DESIGN AND DATA STORYTELLING

9 hours

Designing interactive dashboards, Dashboard taxonomies and organizational functions, User interaction and protection, Common mistakes in dashboard design, Use case-based dashboard development for: Finance, Marketing, Healthcare, Insurance , Storytelling with Data and using Power BI Q&A for narrative insights

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain core concepts in data abstraction and statistical chart design.

CO2: Apply appropriate visualization techniques for scalar, vector, temporal, and text data.

CO3: Analyze and interpret multivariate data using visual analytics.

CO4: Develop interactive data visualizations using Tableau and Power BI.

CO5: Design and evaluate storytelling dashboards for real-world datasets.

Textbooks:

23CSD207 DEEP LEARNING LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite: Python Programming and libraries like NumPy, Pandas, and Matplotlib, Linear Algebra and Probability, Machine Learning Fundamental

Course Description:

This lab course offers hands-on experience in building and evaluating neural networks and deep learning models. Students will implement architectures like DNNs, CNNs, RNNs, autoencoders, and sequence models using real-world datasets. The course emphasizes practical skills in model training, regularization, use of pre-trained models, and performance evaluation for tasks such as classification, prediction, and NLP.

Course Objectives:

The objectives of the course are to

1. Implement fundamental neural network architectures for various data types.
2. Explore deep learning models like CNNs, autoencoders, and RNNs for image, text, and sequence data.
3. Apply regularization techniques and pre-trained models to improve performance and reduce overfitting.
4. Experiment with advanced architectures like encoder-decoder models with attention.
5. Evaluate deep learning models using real-world datasets and metrics like accuracy, precision, and recall.

List of Experiments:

1. Design and implement a neural based network for generating word embedding for words in a document corpus.
2. Write a program to demonstrate the working of a deep neural network for classification task.
3. Design and implement a Convolutional Neural Network (CNN) for classification of image dataset.
4. Build and demonstrate an autoencoder network using neural layers for data compression on image dataset.
5. Design and implement a deep learning network for classification of textual documents.
6. Design and implement a deep learning network for forecasting time series data.
7. Write a program to enable pre-train models to classify a given image dataset.
8. Write a program to read a dataset of text reviews. Classify the reviews as positive or negative.
9. Design and evaluate a deep learning model using dropout and L2 regularization to prevent overfitting.
10. Implement an Encoder-Decoder architecture with attention mechanism for machine translation.

Course Outcomes:

After completion of the course, Students will be able to

CO1: Implement basic neural networks and word embedding models.

CO2: Develop deep learning models such as CNNs, RNNs, and autoencoders.

CO3: Use pre-trained models and regularization techniques to optimize performance.

CO4: Apply deep learning models to solve real-world problems in text, image, and time-series domains.

CO5: Evaluate deep learning models using appropriate performance metrics and explain results.

Textbooks:

1. Ian Goodfellow, Yoshua Bengio, Aaron Courville, “Deep Learning”, MIT Press, 2016.
2. Josh Patterson and Adam Gibson, “Deep learning: A practitioner's approach”, O'Reilly Media, First Edition, 2017.

2. Deep learning Cook Book, Practical recipes to get started Quickly, Douwe Osinga, O'Reilly, Shroff Publishers, 2019.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

B. Tech III Year II Semester

23CSD208 PREDICTIVE ANALYTICS AND VISUALIZATION LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite:

Course Description:

This laboratory course provides practical exposure to statistical analysis and modern data visualization techniques using SPSS, Python, Tableau, and Power BI. Students will gain hands-on experience with data preprocessing, inferential statistics, multivariate analysis, predictive modeling, and interactive dashboard development. The course emphasizes both quantitative data interpretation and effective storytelling through dashboards, enabling students to transform complex data into actionable insights.

Course Objectives:

The objectives of the course are to

1. Familiarize students with advanced statistical tools (SPSS) for data preprocessing, hypothesis testing, and multivariate analysis.
2. Perform statistical techniques such as factor analysis, regression, time series forecasting, and decision tree classification.
3. Develop skills in Python for visualizing structured and semi-structured data interactively.
4. Create professional dashboards using Tableau and Power BI for different business use cases.
5. Enable domain-specific storytelling through sales, healthcare, marketing, and time series dashboards.

PART 1

List of Experiments:

1. Introduction to SPSS, Sorting File, Split File, Compute File, Recode File and Select Cases
- 2 Chi- Square Test (Parametric and Non-Para
- 3 Exploratory Factor Analysis
- 4 Cluster Analysis
- 5 Logistic Regression
- 6 Discriminant Analysis
- 7 Confirmatory Factor Analysis
- 8 Conjoint Analysis
- 9 Time Series
- 10 MANOVA
- 11 Decision Tree Analysis

PART 2

List of Experiments:

1. Connecting to the data
2. Formatting and insertion of data
3. Creating worksheets, navigating the sheets, applying filters, aggregating the data
4. Organize the data into dashboards
5. Create story
6. Develop interactive plots in Python
7. Create Time series Data Visualization in Python
8. Visualization of Semi-Structured data
9. Create Sales Growth Dashboard – for the tracking of sales teams progress
10. Design Social media Dashboard – find how well your sponsored social activating are performing, monitor your PPC campaigns
11. Develop Healthcare Data Dashboard – Allows hospital administrators to manage and identify patient hazards from a single screen.

Course Outcomes:

After completion of the course, Students will be able to

- CO1: Perform statistical data analysis and hypothesis testing using SPSS.
- CO2: Apply multivariate techniques such as factor analysis, regression, and decision trees.
- CO3: Develop visualizations using Python for structured and semi-structured data.
- CO4: Build and publish dashboards using Tableau and Power BI for different business domains.
- CO5: Design effective visual stories that communicate insights from real-world datasets.

Textbooks:

1. Dean Abbott, Applied Predictive Analytics, Published by Jhon Wiley & Sons, Inc, 2014.
2. Cole Nussbaumer Knaflitz, Storytelling with data, Wiley .

23ECE501 TINKERING LABORATORY

L	T	P	C
0	0	2	1

Course Description:

The aim of tinkering lab for engineering students is to provide a hands-on learning environment where students can explore, experiment, and innovate by building and testing prototypes. These labs are designed to demonstrate practical skills that complement theoretical knowledge. These labs bridge the gap between academia and industry, providing students with the practical experience. Some students may also develop entrepreneurial skills, potentially leading to start-ups or innovation-driven careers. Tinkering labs aim to cultivate the next generation of engineers by giving them the tools, space, and mind-set to experiment, innovate, and solve real-world challenges.

Course Objectives:

1. Encourage Innovation and Creativity
2. Provide Hands-on Learning and Impart Skill Development
3. Foster Collaboration and Teamwork
4. Enable Interdisciplinary Learning, Prepare for Industry and Entrepreneurship
5. Impart Problem-Solving mind-set

List of Experiments:

1. Make your own parallel and series circuits using breadboard for any application of your choice.
2. Design and 3D print a Walking Robot
3. Design and 3D Print a Rocket.
4. Temperature & Humidity Monitoring System (DHT11 + LCD)
5. Water Level Detection and Alert System
6. Automatic Plant Watering System
7. Bluetooth-Based Door Lock System
8. Smart Dustbin Using Ultrasonic Sensor
9. Fire Detection and Alarm System
10. RFID-Based Attendance System
11. Voice-Controlled Devices via Google Assistant
12. Heart Rate Monitoring Using Pulse Sensor
13. Soil Moisture-Based Irrigation
14. Smart Helmet for Accident Detection
15. Milk Adulteration Detection System
16. Water Purification via Activated Carbon
17. Solar Dehydrator for Food Drying

18. Temperature-Controlled Chemical Reactor
19. Ethanol Mini-Plant Using Biomass
20. Smart Fluid Flow Control (Solenoid + pH Sensor)
21. Portable Water Quality Tester
22. AI Crop Disease Detection
23. AI-based Smart Irrigation
24. ECG Signal Acquisition and Plotting
25. AI-Powered Traffic Flow Prediction
26. Smart Grid Simulation with Load Monitoring
27. Smart Campus Indoor Navigator
28. Weather Station Prototype
29. Firefighting Robot with Sensor Guidance
30. Facial Recognition Dustbin
31. Barcode-Based Lab Inventory System
32. Growth Chamber for Plants
33. Biomedical Waste Alert System
34. Soil Classification with AI
35. Smart Railway Gate
36. Smart Bin Locator via GPS and Load Sensors
37. Algae-Based Water Purifier
38. Attendance via Face Recognition

Note: The students can also design and implement their own ideas, apart from the list of experiments mentioned above.

Note: A minimum of 8 to 10 experiments must be completed by the students.

Course Outcomes:

After completion of the course, Students will be able to

CO1: Apply the principles of design thinking to identify real-world problems and develop feasible solutions.

CO2: Demonstrate proficiency in using basic tools, components, and digital fabrication technologies (e.g., Arduino, sensors, 3D printing, etc.).

CO3: Develop functional prototypes through iterative design, fabrication, and testing.

CO4: Collaborate effectively in multidisciplinary teams to brainstorm, plan, and execute tinkering projects.

CO5: Document the development process, evaluate outcomes, and communicate project results clearly using oral, visual, and written formats.

B. Tech IV Year I Semester

23CSD113 DATA AND INFORMATION SECURITY

L T P C
3 0 0 3

Pre-requisite: Fundamentals of Computer Networks, Operating Systems, and Database Management Systems.

Course Description:

This course introduces the fundamental concepts of data and information security, including security models, threat analysis, authentication, secure communication, web security, and data privacy. It equips students with knowledge of modern security mechanisms and practices required to protect information assets in data-driven applications.

Course Objectives:

The main objective of the course is to

CO1: To understand the fundamentals of information security, security models, and the security life cycle.

CO2: To analyze security threats, vulnerabilities, risks, access control mechanisms, and policy frameworks for protecting information systems.

CO3: To equip students with knowledge of digital signatures, authentication protocols, and modern identity management techniques.

CO4: To understand email, network, cloud, and endpoint security mechanisms for secure data communication.

CO5: To familiarize students with web security protocols, secure electronic transactions, and data privacy principles.

UNIT I INTRODUCTION

9 hours

History, What is Information Security?, Critical Characteristics of Information, NISTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC.

UNIT II SECURITY THREATS, RISK AND POLICY MANAGEMENT

9 hours

Need for Security and Business Requirements, Threats, Vulnerabilities and Attacks, Malware, Phishing, Ransomware, Risk Assessment and Risk Management, Access Control Matrix, Security Policies, Confidentiality Policies, Integrity Policies, Hybrid Policies, Legal, Ethical and Professional Issues, Introduction to Zero Trust Security.

UNIT III DIGITAL SIGNATURE AND AUTHENTICATION

9 hours

Digital Signature and Authentication Schemes: Digital signature-Digital Signature Schemes and their Variants- Digital Signature Standards-Authentication: Overview- Requirements Protocols - Applications - Kerberos -X.509 Directory Services, Multi-Factor Authentication (MFA), Biometric Authentication, Overview of OAuth and Single Sign-On.

UNIT IV E-MAIL AND NETWORK SECURITY

9 hours

E-mail and IP Security: Electronic mail security: Email Architecture -PGP – Operational Descriptions- Key management- Trust Model- S/MIME.IP Security: Overview- Architecture - ESP, AH Protocols IPsec Modes – Security association - Key management, Virtual Private Networks (VPN), Basics of Cloud Security, Endpoint Security Fundamentals.

UNIT V WEB SECURITY AND DATA PRIVACY

9 hours

Web Security: Requirements- Secure Sockets Layer- Objectives-Layers -SSL secure communication- Protocols - Transport Level Security. Secure Electronic Transaction- Entities Dual Signature Verification-SET processing, Data Privacy Basics and Introduction to OWASP Top 10.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1:** Explain the fundamentals of information security, security models, and secure software development practices.
- CO2:** Analyze threats, risks, security policies, and access control mechanisms for protecting information assets.
- CO3:** Apply digital signature schemes, authentication protocols, and identity management techniques in secure systems.
- CO4:** Evaluate email, network, cloud, and endpoint security mechanisms for protecting data transmission.
- CO5:** Illustrate web security protocols, secure transaction mechanisms, and data privacy principles in e-commerce and web applications.

23HUM901 GENDER SENSITIZATION

L T P C
2 0 0 0

Pre-requisite: Nil

Course Description:

The Gender Sensitization course aims to develop students' critical understanding of gender as a social construct and its impact on various aspects of life, including family, workplace, education, media, and society. It explores gender roles, stereotypes, discrimination, division of labour, gender-based violence, and cultural representations of gender. The course encourages students (especially in engineering and technical fields) to reflect on gender issues in STEM education and workplaces, constitutional safeguards for gender equality, legal frameworks against gender violence, and the importance of building inclusive, gender-sensitive environments in professional and personal spheres.

Course Objectives:

This course enables students

1. Understand the basic concepts of gender, related terminology, and the processes of gender construction and socialization.
2. Familiarize students with the biological, sociological, psychological, and legal aspects of gender and gender roles.
3. Analyse how gender discrimination operates in society and explore ways to counter it.
4. Examine the gendered division of labour, its political and economic dimensions, and its implications in professional settings, including tech companies and start-ups.
5. Develop awareness of various forms of gender-based violence, their causes, consequences, and relevant legal protections in India.
6. Foster critical reflection on the influence of gender on culture, media, language, and relationships, and to promote gender-sensitive practices in engineering teams and workplaces.

UNIT I UNDERSTANDING GENDER

6 hours

Introduction: Definition of Gender-Basic Gender Concepts and Terminology-Exploring Attitudes towards Gender-Construction of Gender-Socialization: Making Women, Making Men - Preparing for Womanhood. Growing up Male.

UNIT II GENDER ROLES AND RELATIONS

6 hours

Two or Many? - Struggles with Discrimination - Gender Roles and Relations -Types of Gender Roles - gender stereotypes; Gender Roles and Relationships Matrix - Missing Women-Sex Selection and its Consequences-Declining Sex Ratio - Demographic Consequences - Gender Spectrum in STEM education and workplace (e.g., women in engineering)

UNIT III GENDER AND LABOUR

6 hours

Division and Valuation of Labour - Housework: The Invisible Labour - "My Mother doesn't Work." "Share the Load."-Work: Its Politics and Economics -Fact and Fiction- Unrecognized and Unaccounted work - Gender Development Issues- Gender and Mainstreaming Gendered division of labour in tech companies/start-ups - case studies on work-life balance in IT

UNIT IV GENDER BASED VIOLENCE

6 hours

The Concept of Violence- Types of Gender-based Violence-Gender-based Violence from a Human Rights Perspective-Sexual Harassment - Domestic Violence - Different forms of violence against women - Causes of violence, impact of violence against women - Consequences of gender-based violence - Cyber gender-based violence and online safety; gender-based laws in India (POSH, Domestic Violence Act, Immoral Traffic Prevention Act, Dowry Prohibition Act, Indecent representation of women prohibition Act, Maternity benefit Act, Equal remuneration Act, etc.

UNIT V GENDER AND CULTURE

6 hours

Gender and Film-Gender and Electronic Media-Gender and Advertisement-Gender and Popular Literature-Gender Development Issues-Gender Issues - Gender Sensitive Language- Just Relationships- Gender-sensitive language and inclusive practices in engineering teams/projects

Course Outcomes:

After completing this Unit, students will be able to

CO1: Understand the basic concepts of gender and its related terminology (L1, L2)

CO2: Identify the biological, sociological, psychological and legal aspects of gender. (L1, L2)

CO3: Use the knowledge in understanding how gender discrimination works in our society and how to counter it. (L3)

CO4: Analyze the gendered division of labour and its relation to politics and economics. (L4)

CO5: Analyze depiction of gender and culture in media projections (L4)

Open Elective – I

23HUM301 INDIAN KNOWLEDGE SYSTEM

L T P C
3 0 0 3

Pre-requisite: Nil

Course Objectives:

The main objectives of the course is to

1. To introduce the scope, significance, and interdisciplinary nature of Indian Knowledge Systems and their relevance in the modern world.
2. To explore the philosophical and epistemological foundations of Indian Knowledge Systems, including key concepts like Pramāṇa, Dharma, and Rta.
3. To examine the scientific contributions of ancient India in fields such as mathematics, astronomy, medicine, and engineering.
4. To understand Indian perspectives on society, governance, literature, and aesthetics through classical texts and traditions.
5. To appreciate the cultural richness, ethical values, and traditional educational systems that shaped Indian civilization.

UNIT I INDIAN KNOWLEDGE SYSTEM: AN INTRODUCTION

9 hours

Indian Knowledge System: An Overview- Historical evolution and contemporary Relevance- Interdisciplinary approach and integration in education-The Vedic Corpus, The Four Vedas and their components, Oral transmission and cultural continuity--Philosophical Systems, Orthodox (Āstika) and Heterodox (Nāstika) schools, Logic, metaphysics, and epistemology in Indian philosophy -Wisdom through the Ages- Scientific and Mathematical Contributions, Ayurveda, Astronomy, Metallurgy, Mathematics, Key scholars: Charaka, Sushruta, Aryabhata, Bhaskaracharya

UNIT II FOUNDATIONAL CONCEPTS IN INDIAN KNOWLEDGE SYSTEMS 9 hours

Shaping India's intellectual traditions- Ancient Indian linguistics, highlighting phonetics, grammar, and language philosophy-traditional number systems, units of measurement, and their practical applications in science and trade -indigenous frameworks for organizing and classifying knowledge, offering insights into how Indian scholars approached learning, epistemology, and the systemic cultivation of wisdom across disciplines.

UNIT III SCIENCE AND TECHNOLOGY IN INDIAN KNOWLEDGE SYSTEMS 9 hours

India's classical achievements in mathematics, astronomy, architecture, and science. Learners explore ancient texts and applications—highlighting concepts like zero, planetary motion, and structural design. integration of science with philosophy and sustainability. Through notable scholars and indigenous techniques, how Indian scientific thought continues to influence contemporary innovations-offering wisdom for solving modern challenges.

UNIT IV HUMANITIES AND SOCIAL SCIENCES IN INDIAN KNOWLEDGE SYSTEMS 9 hours

Indian insights on leadership, wellbeing, and governance through ancient texts like the Srimad Bhagavad Gita. Topics include holistic management principles, psychological well-being, ethical governance, and traditional administrative models—emphasizing their relevance to modern society, personal growth, and nation-building.

**UNT V CULTURAL, EDUCATIONAL, AND ETHICAL DIMENSIONS
OF INDIAN KNOWLEDGE SYSTEMS**

9 hours

Art, Architecture, and Aesthetics-Temple architecture and sculpture-Music, dance, and literary traditions-**Education Systems and Institutions**, Gurukula system and pedagogical practices, Ancient universities: Nalanda, Takshashila-**Ethics and Values in Indian Thought**-Dharma, Karma, Moksha — principles of righteous living, Sustainability, harmony, and spiritual ecology-**Contemporary Relevance and Global Influence**, Indian knowledge systems in modern science and culture, Resurgence through NEP 2020 and academic initiatives

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Learners will be able to **describe** the scope and interdisciplinary relevance of Indian Knowledge Systems in contemporary contexts.

CO2: Learners will be able to **analyze** foundational philosophical concepts such as *Pramāṇa*, *Dharma*, and *Rta* within Indian epistemology.

CO3: Learners will be able to **apply** ancient Indian scientific principles to understand traditional practices in mathematics, astronomy, and medicine.

CO4: Learners will be able to **evaluate** classical Indian texts to interpret perspectives on governance, society, and aesthetics.

CO5: Learners will be able to **design** culturally informed ethical frameworks and educational models inspired by traditional Indian systems.

Open Elective – I

23MAT301 ADVANCED NUMERICAL METHODS

L	T	P	C
3	0	0	3

Pre-requisite: 23MAT101, 23MAT102

Course Description:

This course reviews and continues the study of computational techniques for evaluating interpolations, derivatives and integrals; solving system of algebraic equations, transcendental equations, ordinary differential equations and partial differential equations. The course emphasizes on numerical and mathematical methods of solutions with appropriate error analysis.

Course Objectives:

The main objectives of the course is to

1. To introduce computation methods of solving algebraic and transcendental equations.
2. To avail the basics of numerical techniques for solving the system of linear equations.
3. To familiarize the knowledge of interpolation and numerical calculus.
4. To use numerical calculus for solving ordinary differential equations.
5. To introduce the computational techniques for solving partial differential equations.

UNIT I SOLUTIONS OF ALGEBRAIC AND TRANSCENDENTAL EQUATIONS 9 hours

Errors, sources of errors, floating point arithmetic, significant digits, relative error, propagation of errors, how to avoid loss of significant digits, evaluation of polynomial. Bisection method, False-position method, Secant method, Fixed-point iteration method, Newton's method – single and multiple roots, Order of convergence of the methods.

UNIT II SOLUTIONS OF SYSTEM OF ALGEBRAIC EQUATIONS 9 hours

LU decomposition, Thomas algorithm for the tridiagonal systems, Norms-Euclidean, mini-maxi, Frobenius and 1-,2- and ∞ -norms, Condition numbers and errors in computed solutions. Jacobi's method, Gauss-Seidel method, Power method for obtaining eigenvalues and eigenvectors of matrices.

UNIT III INTERPOLATION & NUMERICAL CALCULUS 9 hours

Existence and Uniqueness of interpolating polynomial, Lagrange polynomials, Divided differences, Evenly spaced points, Error of interpolation, cubic spline, Inverse interpolation, Derivatives from difference table, Higher order derivatives, Trapezoidal rule, Simpsons rule, a composite formula, Gaussian Quadrature.

UNIT IV NUMERICAL SOLUTIONS TO ORDINARY DIFFERENTIAL EQUATIONS 9 hours

Taylor series method, Euler and Modified Euler's method, Runge-Kutta methods for initial value problems, Shooting method, Finite difference method for boundary value problems.

**UNIT V NUMERICAL SOLUTIONS TO PARTIAL DIFFERENTIAL
EQUATIONS**

9 hours

Laplace and Poisson equations (five-point formula), Finite difference methods for one-dimensional Heat and Wave equations.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Solve the system of algebraic and transcendental equations.

CO2: Apply the numerical techniques to find the solution to system of equations.

CO3: Calculate and analyze the rate of variations and numerical sum of such changes using numerical calculus relevant to the field of Engineering.

CO4: Find the accurate numerical solutions to ordinary differential equations representing some Engineering problems.

CO5: Compute the solutions for engineering problems represented by partial differential equations.

Textbooks:

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23MAT302 ENGINEERING OPTIMIZATION

L	T	P	C
3	0	0	3

Pre-requisite: 23MAT101, 23MAT102, 23MAT104

Course Description:

Unconstrained and constrained optimization, Linear programming problem, transportation and assignment problems, dynamic programming problem, project management and queuing models.

Course Objectives:

The main objectives of the course is to

1. Understand the optimization techniques for solving engineering problems.
2. Formulate and solve linear programming problem.
3. Obtain the optimal solution for transportation and assignment problems.
4. Avail knowledge to apply the game theory and project management techniques to find the solutions to the complex problems.
5. Understand the basic characteristic features of a queuing system and acquire skills in analyzing queuing models.

UNIT I CLASSICAL OPTIMIZATION

9 hours

Introduction to optimization, unconstrained optimization with single variable and multi variable. Constrained multivariable optimization with equality constraints- Lagrange multipliers method, constrained multivariable optimization with inequality constraints - Kuhn-Tucker conditions.

UNIT II LINEAR PROGRAMMING PROBLEM

9 hours

Linear Programming Problem (LPP), Mathematical formulation, graphical solution, simplex method. Artificial variable technique - Big M-method and two phase simplex method. Duality, dual Simplex method.

UNIT III TRANSPORTATION PROBLEM AND ASSIGNMENT PROBLEM

9 hours

Transportation problem: definition and algorithm, transshipment problem. Assignment problem, travelling salesman problem.

UNIT IV GAME THEORY AND PROJECT MANAGEMENT

9 hours

Formulation of games, Two Person-Zero sum game, games with and without saddle point, Graphical solution ($2 \times n$, $m \times 2$ game), dominance property. Network analysis: Network representation, Critical Path Method (CPM) and Project Evolutionary and Review Technique (PERT).

UNIT V QUEUING MODELS

9 hours

Introduction to queuing system, Birth and Death processes, Single and multiple server queueing models, Little's formula - Finite Calling Population Queuing Models – Multi-Phase Service Queuing Model.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understood the importance of unconstrained and constrained optimization to solve engineering problems.

CO2: Get an idea about the linear programming techniques.

CO3: Solve transportation and assignment problems in engineering situations.

CO4: Analyze the problems of network analysis for project management and game theory.

CO5: Apply the Queuing system models to solve problems in engineering & industry.

Textbooks:

1. J K Sharma, Operations Research: Theory and Practice, Macmillan Publishers India Ltd, 5th edition, 2013.
2. B.S. Grewal, Higher Engineering Mathematics, 43rd edition (2014), Khanna publishers.

4. A Ravindran, DT Philips and JJ Solberg, Operations Research: Principles and Practice, John Wiley & Sons, Singapore, 2nd edition.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23PHY301 LASER PHYSICS AND ADVANCED LASER TECHNOLOGY

L T P C
3 0 0 3

Pre-requisite: Basic knowledge of atomic structure at intermediate (10+2) level is sufficient

Course Description:

Laser usage is rampant in various technological applications. Several fields gaining attention in the usage of lasers. This course covers the introduction to the theory and mechanism of laser action, various types of lasers and their applications and future use.

Course Objectives:

The main objectives of the course is to

1. Make the student to understand the detailed principles of various lasers.
2. Profound understanding of different variety of lasers will provide them to think of superior selection and usage of lasers in practical technological applications.
3. Students are aware of latest developments in certain areas of Laser technology which have important applications for societal needs.
4. Explain how material processing is accomplished with lasers. Estimate laser operation parameters for material processing.
5. Exposure about Lasers applications in engineering, communications, spectroscopy and material process etc.

UNIT I INTRODUCTION TO LASER TECHNOLOGY 9 hours

Laser characteristics, The Einstein Coefficients, Absorption and Emission Cross Sections, Spontaneous and Stimulated emission of radiation, Population inversion, Methods of Population Inversion, Laser Rate Equations, stable two minor optical resonators, Mode selection, Gain in the regenerative laser cavity.

UNIT II GASES AND LIQUIDS LASING MEDIUM 9 hours

Energy levels & Radiative properties of Atoms and molecules; *Atomic lasers*: He-Ne laser, Argon Ion laser; *Molecular Lasers*: Carbon dioxide laser, Liquid energy levels and their radiative properties, Organic Dye laser.

UNIT III SOLID STATE LASERS 9 hours

Energy Levels in solids-dielectric medium, Solid-state lasing materials, Narrow line width laser materials, broad band line width laser materials, solid state lasers: Nd:YAG, Nd:YLF; Ti:Sapphire (introduction only)

Energy Levels in solids-semiconductor medium, direct and indirect band gap semiconductors, Semiconductor diode laser, Quantum dot lasers (Introduction only)

UNIT IV PULSED OPERATION OF LASERS 9 hours

Nanosecond: Q-Switching, Techniques of Q-Switching: electro-optic, Acousto-Optic. Femtosecond: Relationship between pulse duration and Spectral Width, Passive mode-locking, Active mode locking, Kerr lens mode locking, Amplification of femtosecond pulses.

UNIT V

LASER APPLICATIONS

9 hours

Laser processing of materials: laser cutting, laser drilling, welding; Lasers in metrology- Accurate measurement of length, light wave communications; Laser spectroscopy: Laser fluorescence and Raman scattering.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand the principle of phenomenon of laser and identify the operating principle involved in various type of lasers.

CO2: Estimate stability requirements in producing laser light by different types of sources

CO2: CO3: Differentiate or list the various types of lasers and their means of excitation.

CO4: Assess (Identify) which laser would best meet the need for a particular industrial or research task.

CO5: Student can knowledge of latest technological developments in laser technology. Femtosecond laser etc.

Textbooks:

1. Laser Fundamentals: William T Silfvast. Cambridge Publication.
2. Laser Theory and Applications: A.K. Ghatak and K. Thyagarajan, Springer
3. Femtosecond Laser Pulses Principles and Experiments: Claude Rulli`ere, Springer
4. Principles of Laser: O. Svelto
5. Laser Physics: Peter W Miloni, Joseph H Eberly.

Reference Books:

1. Solid State Laser Engineering: Walter Koechner. Springer series in optical sciences.
2. Ultrafast Optics, Andrew M. Weiner
3. Laser spectroscopy: Demtroder
4. Laser Applications: Monte Ross

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23PHY302 THIN FILM TECHNOLOGY AND ITS APPLICATIONS

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

Nucleation, crystallization, surface energy, various thin film coating processes including both physical vapour deposition such as evaporation, sputtering, pulsed laser deposition and chemical vapour deposition, spray coating, and other methods such as spin-coating, plasma polymerization, Langmuir Blodgett, transport phenomena in thin films, various properties of thin films, techniques and method to characterize thin films, current application of thin film, introduction to fabrication of thin film devices

Course Objectives:

The main objectives of the course is to

1. To provide students with a comprehensive overview on the fundamentals of thin film preparation and characterization.
2. To enable the students to develop a thorough understanding of how core physics can be used to understand thin film deposition processes.
3. To establish the correlation between processing variables and materials characteristics and performance within the framework of key modern technologies.
4. To realize thin film applications to science and technology

UNIT I

PHYSICS OF THIN FILMS

8 hours

Introduction - Role of thin films in devices - Thin film definition - Crystalline and amorphous films - Crystal defects - Nucleation and growth - film formation.

UNIT II

THIN FILM DEPOSITION TECHNIQUES

10 hours

Physical methods of films deposition-evaporation, e-beam, sputter deposition, pulsed laser, molecular beam epitaxy. Chemical methods of film deposition -Deposition of Inorganic films from Solutions-Chemical vapour deposition - Electrolysis, Anodization, Spray pyrolysis, Other techniques: Langmuir Blodgett and Spin Coating.

UNIT III

PROPERTIES OF THIN FILMS

8 hours

Structural-Optical-Electrical-Magnetic-Mechanical and Thermal properties of thin films

UNIT IV

CHARACTERIZATION OF THIN FILMS

10 hours

Imaging Techniques (SEM, AFM, TEM) - Structural Techniques (XRD, Raman)-Optical Techniques (UV-Vis-NIR, PL)-Electrical Techniques (Hall Effect, IV, CV)-Magnetic Techniques (EPR, H-V curve)-Mechanical Techniques (Hardness testing)-Thickness measurement (profilometer, ellipsometry).

UNIT V

APPLICATIONS OF THIN FILMS

9 hours

Transparent conducting coating - Optical coating – Solar cells – Photocatalytic – Sensors - Superconductivity- Superhard coatings – Thin film transistors.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Discuss the differences and similarities between different vacuum based deposition techniques, evaluate and use models for nucleating and growth of thin films.

CO2: Assess the relation between deposition technique, film structure, and film properties.

CO3: Know the typical thin film applications.

CO4: Motivate selection of deposition techniques for various applications.

Textbooks:

1. Thin Film Deposition: Principles and Practice, *Donald L. Smith*, McGraw Hill, Singapore, 2001.
2. Maissel, L.I and Glang. R, "Handbook of thin film technology", McGraw Hill, 1970.

Reference Books:

1. Thin film phenomena / *Kasturi L. Chopra*, New York: McGraw-Hill, c1969.
2. G. Cao, "Nanostructures & Nanomaterials: Synthesis, Properties & Applications" Imperial College Press, 2004.
3. An introduction to physics and technology of thin films / *Alfred Wagendristel, Yuming Wang*, Singapore: World Scientific, c1994.
4. Thin film processes, *John L Vossen, Werner Kehn* editors, Academic Press, New York, 1978.
5. Thin film physics / *O.S. Heavens*, London: Methuen, c1970.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23PHY303 WASTE TO SUSTAINABLE ENERGY AND ENERGY SYSTEMS

L T P C
3 0 0 3

Pre-requisite: Basic knowledge of Physics and chemistry at the intermediate (10+2) level is sufficient

Course Description:

This course covers waste-to-energy conversion and energy storage technologies, including thermal, biological, and chemical methods. It introduces relevant policies, case studies, and trends to help students design sustainable energy solutions aligned with the circular economy and climate goals.

Course Objectives:

The main objectives of the course is to

1. Understand various methods of energy generation from waste.
2. To explore thermal, biological, and chemical conversion technologies.
3. To examine modern energy storage devices and their integration with waste-to-energy systems.
4. To analyse the techno-economic feasibility of these systems for sustainable development.
5. To develop interdisciplinary skills in waste-to-energy technologies, enhancing student employability in sustainable energy and environmental sectors.

UNIT I INTRODUCTION TO WASTE PROCESSING, TRANSPORT, AND MANAGEMENT 9 hours

Types of Wastes, Agricultural Residues, and Wastes Including Animal Wastes, Industrial Wastes, Municipal Solid Wastes and Characterization. Waste Processing Types and Composition of Various Types of Wastes- Industrial Waste and Biomedical Waste- Waste Collection and Transportation- Waste Processing- Size Reduction, Separation- Waste Management Hierarchy- Waste Minimization and Recycling of Municipal Solid Waste.

UNIT II THERMAL WASTE CONVERSION TECHNOLOGIES 9 hours

Combustion, incineration, pyrolysis, gasification, Process parameters, design considerations, Emission control, energy recovery, and Case studies of WTE (Waste to Energy) plants in India and abroad

UNIT III BIOLOGICAL AND CHEMICAL CONVERSION 9 hours

Bio gasification: Biomethanation process, biogas digester types. Chemical Conversion: Hydrolysis & hydrogenation; solvent extraction of hydrocarbons; solvolysis of wood, bio crude, biodiesel production via chemical process; transesterification methods; Chemicals from biomass.

UNIT IV ENERGY STORAGE SYSTEMS 9 hours

Introduction to Energy Storage Systems - Types of energy storage- electrical, mechanical, chemical, thermal; Batteries (Li-ion, lead-acid, flow batteries), Supercapacitors and hybrid storage, Hydrogen storage and fuel cells.

UNIT V WASTE MANAGEMENT AND ENERGY RECOVERY 9 hours

Characteristics and Perspectives of Waste, Unit Operations & Transformation Technologies, Waste Disposal, Hazardous Waste Management & Waste Recycling

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: To understand various methods of energy recovery from waste.

CO2: To explore thermal conversion technologies.

CO3: To explore biological and chemical conversion technologies

CO4: To examine modern energy storage devices and their integration with waste-to-energy systems.

CO5: To analyse the techno-economic feasibility of these systems for sustainable development.

Textbooks:

1. Waste-to-Energy. Technologies and Project Implementation by Marc J. Rogoff And Francois Screve (Auth.) Publisher: William Andrew, 2011/2019

2. B. Lal and M. Patwardhan, "Wealth from Waste: Trends and Technologies", TERI Press
3. Municipal Solid Waste to Energy Conversion Processes: Processes Technical, and Renewable comparisons, by Gary C. Young, ISBN:9780470539675, Publisher: John Wiley & Sons, Publication Date: June 2010.
4. Parker Colin, and Roberts, "Energy from Waste – An Evaluation of Conversion Technologies", Elsevier Applied Science, London, 1985.
5. La Grega, M., et al., "Hazardous Waste Management", McGraw-Hill, c. 1200 pp., 2nd ed., 2001

Journals & Reviews:

1. Updated Journals and Reviews of the last 5 Years
2. Home (<https://swayam.gov.in>) > Courses (<https://swayam.gov.in/explorer>) > Waste to Energy Conversion, By Prof. P. Mondal | IIT Roorkee

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23CHE301 CHEMISTRY OF POLYMERS AND ITS APPLICATIONS

L	T	P	C
3	0	0	3

Pre-requisite: None

Course Objectives:

The main objectives of the course is to

1. To understand the basic principles of polymers
2. To understand natural polymers and their applications.
3. To impart knowledge to the students about synthetic polymers, their preparation and importance.
4. To enumerate the applications of hydrogel polymers
5. To enumerate applications of conducting and degradable polymers in engineering.

UNIT I POLYMERS-BASICS AND CHARACTERIZATION:-

9 hours

Basic concepts: monomers, repeating units, degree of polymerization, linear, branched and network polymers, classification of polymers, Polymerization: addition, condensation, copolymerization and coordination polymerization. Average molecular weight concepts: number, weight and viscosity average molecular weights, polydispersity and molecular weight distribution. Measurement of molecular weight: End group, viscosity, light scattering, osmotic and ultracentrifugation methods, analysis and testing of polymers.

UNIT II NATURAL POLYMERS & MODIFIED CELLULOSICS

9 hours

Natural Polymers: Chemical & Physical structure, properties, source, important chemical modifications, applications of polymers such as cellulose, lignin, starch, rosin, shellac, latexes, vegetable oils and gums, proteins.

Modified cellulotics: Cellulose esters and ethers such as Ethyl cellulose, CMC, HPMC, cellulose acetals, Liquid crystalline polymers; specialty plastics- PES, PAES, PEEK, PEA.

UNIT III SYNTHETIC POLYMERS

9 hours

Addition and condensation polymerization processes– Bulk, Solution, Suspension and Emulsion polymerization. Preparation and significance, classification of polymers based on physical properties. Thermoplastics, Thermosetting plastics, Fibers and elastomers, General Applications. Preparation of Polymers based on different types of monomers, Olefin polymers(PE,PVC), Butadiene polymers(BUNA-S,BUNA-N), nylons, Urea-formaldehyde, phenol – formaldehyde, Melamine Epoxy and Ion exchange resins.

UNIT IV HYDROGELS OF POLYMER NETWORKS

9 hours

Definitions of Hydrogel, polymer networks, Types of polymer networks, Methods involved in hydrogel preparation, Classification, Properties of hydrogels, Applications of hydrogels in drug delivery.

UNIT V CONDUCTING AND DEGRADABLE POLYMERS:

9 hours

Conducting polymers: Introduction, Classification, Mechanism of conduction in Poly Acetylene, Poly Aniline, Poly Thiophene, Doping, Applications.

Degradable polymers: Introduction, Classifications, Examples, Mechanism of degradation, poly lactic acid, Nylon-6, Polyesters, applications.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1: Classify the polymers, explain polymerization mechanism, differentiate addition, condensation polymerizations, Describe measurement of molecular weight of polymer
CO2: Describe the physical and chemical properties of natural polymers and Modified celluloses.
CO3: Differentiate Bulk, solution, Suspension and emulsion polymerization, describe fibers and elastomers, Identify the thermosetting and thermo polymers.
CO4: Identify types of polymer networks, describe methods involve in hydrogel preparation, Explain applications of hydrogels in drug delivery,
CO5: Explain classification and mechanism of conducting and degradable polymers.

Textbooks:

1. A Text book of Polymer science, Billmayer
2. Polymer Chemistry – G.S.Mishra
3. Polymer Chemistry – Gowarikar

Reference Books:

1. Organic polymer Chemistry, K.J.Saunders, Chapman and Hall
2. Advanced Organic Chemistry, B.Miller, Prentice Hall
3. Polymer Science and Technology by Premamoy Ghosh, 3rd edition, McGraw-Hill, 2010.

Online Learning Resources

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23CHE302 GREEN CHEMISTRY AND CATALYSIS FOR SUSTAINABLE ENVIRONMENT

L	T	P	C
3	0	0	3

Pre-requisite: None

Course Objectives:

The main objectives of the course is to

1. Learn an interdisciplinary approach to the scientific and societal issues arising from industrial chemical production, including the facets of chemistry and environmental health sciences that can be integrated to promote green chemistry
2. Sensitize the students in redesigning of chemicals, industrial processes and products by means of catalysis.
3. Understand the use of alternatives assessments in using environmentally benign solvents.
4. Emphasize current emerging greener technologies and the need of alternative energies.
5. Learn to adopt green chemistry principles in practicing Nanoscience

UNIT I PRINCIPLES AND CONCEPTS OF GREEN CHEMISTRY

9 hours

Introduction, Green chemistry Principles, sustainable development and green chemistry, atom economy, atom economic: Rearrangement and addition reactions and un-economic reactions: Substitution, elimination and Wittig reactions, Reducing Toxicity. Waste - problems and Prevention: Design for degradation.

UNIT II CATALYSIS AND GREEN CHEMISTRY

9 hours

Introduction to catalysis, Heterogeneous catalysts: Basics of Heterogeneous Catalysis, Zeolites: Catalytic cracking, ZSM-5 catalyst and high silica zeolites, TS1 Oxidation catalyst, Catalytic Converters, Homogeneous catalysis: Hydrogenation of alkenes using wilkinson's catalyst, Phase transfer catalysis: Hazard Reduction, C-C Bond Formation, Oxidation Using Hydrogen Peroxide.

UNIT III ORGANIC SOLVENTS: ENVIRONMENTALLY BENIGN SOLUTIONS

9 hours

Organic solvents and volatile organic compounds, solvent free systems, supercritical fluids: Super critical carbondioxide, super critical water and water as a reaction solvent: water based coatings, Ionic liquids as catalyst and solvent.

UNIT IV EMERGING GREENER TECHNOLOGIES AND ALTERNATIVE ENERGY SOURCES

9 hours

Biomass as renewable resource, Energy: Fossil Fuels, Energy from Biomass, Solar Power, Fuel Cells(Hydrogen—oxygen fuel cell), Photochemical Reactions: Advantages of and Challenges Faced by Photochemical Processes, Examples of Photochemical Reactions(caprolactum), Chemistry Using Microwaves: Microwave Heating, Microwave-assisted Reactions, Sonochemistry.

UNIT V GREEN PROCESSES FOR GREEN NANOSCIENCE

9 hours

Introduction and traditional methods in the nanomaterials synthesis, Translating green chemistry principles for practicing Green Nanoscience. Green Synthesis of Nanophase Inorganic Materials and Metal Oxide Nanoparticles: Hydrothermal Synthesis, Reflux Synthesis, Microwave-Assisted Synthesis, Other methods for Green synthesis of metal and metal oxide nanoparticles, Green chemistry applications of Inorganic nanomaterials

Course Outcomes:

Upon completion of this course the students should:

- CO1: Recognize green chemistry concepts and apply these ideas to develop respect for the interconnectedness of our world and an ethic of environmental care and sustainability.
- CO2: Understand and apply catalysis for developing eco-friendly processes.
- CO3: Be in a position to use environmental benign solvents where ever possible.
- CO4: Have knowledge of current trends in alternative energy sources.
- CO5: Apply green chemistry principles in practicing green Nanoscience.

Textbooks:

1. M. Lancaster, Green Chemistry an introductory text, Royal Society of Chemistry, 2002.
2. Paul T. Anastas and John C. Warner, Green Chemistry Theory and Practice, 4th Edition, Oxford University Press, USA

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23CHE303 CHEMISTRY OF ENERGY SYSTEMS

L	T	P	C
3	0	0	3

Pre-requisite: NIL

Course Objectives:

1. To make the student understand basic electrochemical principles such as standard electrode potentials, emf and applications of electrochemical principles in the design of batteries.
2. To understand the basic concepts of processing and limitations of Fuel cells & their applications.
3. To impart knowledge to the students about fundamental concepts of photo chemical cells, reactions and applications
4. Necessasity of harnessing alternate energy resources such as solar energy and its basic concepts.
5. To impart knowledge to the students about fundamental concepts of hydrogen storage in different materials and liquification method.

UNIT I ELECTROCHEMICAL SYSTEMS

9 hours

Galvanic cell, Nernst equation, standard electrode potential, application of EMF, electrical double layer, polarization, Batteries- Introduction ,Lead-acid ,Nickel- cadmium, Lithium ion batteries and their applications.

UNIT II FUEL CELLS

9 hours

Fuel cell- Introduction, Basic design of fuel cell, working principle, Classification of fuel cells, Polymer electrolyte membrane (PEM) fuel cells, Solid-oxide fuel cells (SOFC), Fuel cell efficiency and applications.

UNIT III PHOTO AND PHOTO ELECTROCHEMICAL CONVERSIONS

9 hours

Photochemical cells Introduction and applications of photochemical reactions, specificity of photo electrochemical cell, advantage of photoelectron catalytic conversions and their applications.

UNIT IV SOLAR ENERGY

9 hours

Introduction and prospects, photovoltaic (PV) technology, concentrated solar power (CSP), Solar cells and applications.

UNIT V HYDROGEN STORAGE

9 hours

Hydrogen storage and delivery: State-of-the art, Established technologies, Chemical and Physical methods of hydrogen storage, Compressed gas storage, Liquid hydrogen storage, Other storage methods, Hydrogen storage in metal hydrides, metal organic frameworks (MOF), Metal oxide porous structures, hydrogel , and Organic hydrogen carriers.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Solve the problems based on electrode potential, Describe the Galvanic Cell Differentiate between Lead acid and Lithium ion batteries, Illustrate the electrical double layer

CO2: Describe the working Principle of Fuel cell, Explain the efficiency of the fuel cell Discuss about the Basic design of fuel cells, Classify the fuel cell

CO3: Differentiate between Photo and Photo electrochemical Conversions, Illustrate the photochemical cells, Identify the applications of photochemical reactions, Interpret advantages

of photoelectron catalytic conversion.

CO4: Apply the photo voltaic technology, Demonstrate about solar energy and prospects Illustrate the Solar cells, Discuss about concentrated solar power

CO5: Differentiate Chemical and Physical methods of hydrogen storage, Discuss the metal organic frame work, Illustrate the carbon and metal oxide porous structures
Describe the liquification methods.

Textbooks:

1. Physical chemistry by Ira N. Levine
2. Essentials of Physical Chemistry, Bahl and Bahl and Tuli.
3. Inorganic Chemistry, Silver and Atkins

Reference Books:

1. Fuel Cell Hand Book 7th Edition, by US Department of Energy (EG&G technical services And corporation)
2. Hand book of solar energy and applications by ArvindTiwari and Shyam.
3. Solar energy fundamental, technology and systems by Klaus Jagar et.al.
4. Hydrogen storage by Levine Klebonoff

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23CE301 DISASTER MANAGEMENT

L T P C
3 0 0 3

Pre-requisites: None

Course Description:

The goal of this course is to expose the undergraduate students to different types of disasters and the preparedness needed to mitigate their effects. The course matrix will cover various natural, biological, chemical, and emerging hazards and risks that may cause property loss, loss of lives, and livestock. Thus, the future engineers will understand the social responsibility for the preparedness and mitigation of the damages caused by the disasters.

Course Objectives:

1. To make the students aware of disasters and their impact on living beings.
2. To ensure the students understand vulnerability, disasters, disaster prevention, and risk reduction.
3. To gain a preliminary understanding of approaches for the Disaster Risk Reduction (DRR)
4. To enhance awareness of institutional processes available in the country for disaster risk mitigation.
5. To make the students aware of development activities and case studies.

UNIT I INTRODUCTION

8 hours

Introduction, Etymology of disaster, Concepts and definitions: disaster, hazard, vulnerability, risks, Resilience, prevention, and mitigation.

UNIT II TYPES OF DISASTERS

10 hours

Types of Disaster; natural disasters (earthquakes, volcanoes, forest fires and explosions, heat and cold waves, floods, draught, cyclones, tsunamis, landslides, soil erosion); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.), hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

UNIT III DISASTER IMPACTS

9 hours

Disaster Impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

UNIT IV DISASTER RISK MITIGATION MEASURES

9 hours

Disaster Risk Reduction (DRR) - Disaster management- four phase approach; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications), DRR programmers in India and the activities of National Disaster Management Authority. Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction.

UNIT V IMPACT OF DEVELOPMENTAL ACTIVITIES

9 hours

Disasters, Environment and Development - Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, land use changes, urbanization, etc.), sustainable and environmental friendly recovery; reconstruction and development methods. Different GIS software, basic data types and coordinate systems. Case studies.

Course Outcomes:

The students after completing the course will be able to:

- CO1: Explain various disaster concepts
- CO2: Differentiate between categories of disasters
- CO3: Analyze the impact of various types of disasters
- CO4: Select disaster risk mitigation measures
- CO5: Identify the impact of development activities

Textbooks:

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23CE302 GREEN BUILDINGS

L	T	P	C
3	0	0	3

Pre-requisites: None

Course Description:

The course covers various aspects of bioclimatic architecture like climate-sensitive design, passive solar architecture, Water management, green building materials and construction techniques

Course Objectives:

1. To introduce concepts of sustainability and bioclimatic design in planning, Construction and life of buildings.
2. To equip students with technical knowledge of energy-efficient Green Buildings.
3. To guide students, through projects, to apply concepts and ideas for the design of a green building by introducing them to green initiatives and ratings.
4. To initiate students in basics of functional design and drawing of the various buildings using the above concepts.
5. To understand different evaluation criteria with various green building rating systems

UNIT I GREEN BUILDING CONCEPTS

9 hours

Introduction to bioclimatic architecture- Sustainability in building science and Functional planning- Orientation- Elements of building design and drawing- Building regulations and by-laws
Traditional and Vernacular Architecture- Climate zones- Design Charts- sun path diagram- Solar angles- Indices of thermal comfort- Vernacular buildings in different climate zones.

UNIT II CLIMATE RESPONSIVE SCIENTIFIC PROCESS OF DESIGN

9 hours

Introduction- various steps in Site planning- Plan for Building envelope- Land form-Topography-vegetation- water bodies; Orientation- S/V ratio- P/A ratio- Walls, Fenestration- Roof and floors- Active and passive solar strategies- Passive solar architecture.

UNIT III THERMAL FLOW IN BUILDINGS

9 hours

Calculation of thermal conductance- Heat flow through different building elements- Ventilation and day lighting- Design and placement of openings- Water management in buildings- Techniques to recycle, reuse and harvest water.

UNIT IV GREEN BUILDING MATERIALS AND CONSTRUCTION

9 hours

Material properties- Energy efficiency using various materials- emerging new materials, Construction techniques- Techniques for roof, wall and foundations.

UNIT V ECONOMY OF GREEN BUILDING

9 hours

Cost of building- operation and maintenance- Green building rating system- Evaluation criteria of LEED- TERI - GRIHA case studies- Case studies in different climate zones.

Course Outcomes:

After successful completion of this course, the student will be able to:

CO1: Use various regulations and by-laws for green building construction.

CO2: Do site planning, active and passive for Green Building.

CO3: Compute thermal flow through different building elements.

CO4: Identify energy efficient building materials and construction techniques for building components.

CO5: Compute cost of building/operation and maintenance, evaluation criteria for different case studies.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23ME301 MATERIALS SCIENCE FOR ENGINEERS

L	T	P	C
3	0	0	3

Pre-requisite: 23PHY101 ENGINEERING PHYSICS

Course Objectives:

This course is designed to:

1. Understand the fundamental classification and properties of engineering materials.
2. Explore the structure, properties, and applications of metals and alloys.
3. Gain knowledge on composite materials and their relevance in engineering fields.
4. Learn about the structure and characteristics of ceramics and polymers.
5. Develop an appreciation of smart and advanced materials for modern technologies.

UNIT I CLASSIFICATION OF MATERIALS

9 hours

Introduction to materials science, Classification: Metals, Ceramics, Polymers, Composites, Semiconductors, Biomaterials, Properties: Mechanical, Electrical, Thermal, Optical, Magnetic, Atomic structure and bonding, Crystal structures and defects, Structure–property relationships, Materials selection charts for engineering design.

UNIT II METALS AND ALLOYS

9 hours

Types of metals: Ferrous and non-ferrous, Microstructure of metals, Phase diagrams (binary alloys), Heat treatment of steels, Corrosion and prevention methods, Mechanical behavior and testing: Stress-strain, hardness, fatigue, Common engineering alloys and their applications.

UNIT III COMPOSITES

9 hours

Definition and classification: Particle-reinforced, fiber-reinforced, structural composites, Matrix materials: Polymer, metal, and ceramic matrix, Manufacturing techniques: Hand lay-up, pultrusion, Powder Metallurgy, Slurry Infiltration and Sintering, Properties and performance, Applications in aerospace, automotive, construction, and electronics.

UNIT IV CERAMICS AND POLYMERS

9 hours

Structure and types of ceramics: Crystalline and amorphous, Properties: Thermal resistance, brittleness, conductivity, Processing of ceramics: Sintering, slip casting, hot pressing, Types of polymers: Thermoplastics, thermosets, elastomers, Polymerization processes: Addition and condensation, Mechanical and thermal properties, Applications in electronics, biomedical, and structural sectors.

UNIT V SMART AND ADVANCED MATERIALS

9 hours

Definition and need for smart materials, Shape memory alloys, piezoelectric materials, magnetostrictive materials, Electroactive polymers, self-healing materials, photonic crystals, Nanomaterials and carbon-based materials (graphene, CNTs), Biomaterials and biocompatibility, Materials for electronics, aerospace, and green energy systems, Emerging trends and future directions.

Course Outcomes:

At the end of the course, the student will be able to:

CO1: Identify and classify materials based on their properties and structure.

CO2: Understand the behaviour and applications of metals and alloys in engineering.

CO3: Compare the types and uses of composites in structural and functional applications.

CO4: Understand the processing and properties of ceramics and polymers.

CO5: Identify the emerging applications of smart and advanced materials in multidisciplinary domains.

Textbooks:

1. Callister, W. D., & Rethwisch, D. G. (2020). Materials science and engineering: An introduction (10th ed.). Wiley.
2. Smith, W. F., Hashemi, J., & Prakash, R. (2021). Materials science and engineering (6th ed., SI units). McGraw Hill Education.
3. Upadhyaya, G. S., & Upadhyaya, A. (2022). Materials science and engineering (Revised ed.). Viva Books.

Reference Books:

2. C. Barry Carter and M. Grant Norton, Ceramic Materials: Science and Engineering, Springer, 3rd Edition, 2023.
3. Bhattacharya, D. (2023). Smart materials and structures (2nd ed.). Oxford University Press.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective – I

23ME302 SUSTAINABLE ENERGY TECHNOLOGIES

L	T	P	C
3	0	0	3

Pre-requisite: None

Course Objectives:

This course is designed to:

1. Introduce the global and national energy scenario and emphasize the importance of sustainability in energy systems.
2. Explain the principles and technologies associated with solar and wind energy systems.
3. Familiarize students with hydropower, wave, and tidal energy generation systems and their real-world applications.
4. Describe bioenergy and geothermal systems, including design considerations and environmental implications.
5. Evaluate the economics of renewable energy projects and explore integration techniques including storage and smart grids.

UNIT I INTRODUCTION TO SUSTAINABLE ENERGY SYSTEMS 9 hours

Energy demand and supply scenario – global and Indian context, Environmental impacts of conventional energy sources, Concept of sustainability and carbon footprint, Overview of renewable energy sources, Policy frameworks and SDGs.

UNIT II SOLAR AND WIND ENERGY TECHNOLOGIES 9 hours

Solar radiation basics, types of solar collectors (thermal and photovoltaic), Photovoltaic cell operation, efficiency factors, MPPT basics, Solar thermal applications: water heating, drying, Wind resource assessment, turbine types and operation, Onshore vs offshore wind power.

UNIT III HYDROPOWER, WAVE, AND TIDAL ENERGY 9 hours

Types of hydropower plants, turbine types, site selection, Ocean energy: wave and tidal principles, design concepts, Challenges in marine energy utilization, Case studies from India and abroad.

UNIT IV BIOENERGY AND GEOTHERMAL TECHNOLOGIES 9 hours

Biomass types, anaerobic digestion, biodiesel, bioethanol, Biogas plant design and efficiency, Geothermal energy basics, types of geothermal systems, Environmental and economic impacts.

UNIT V ECONOMICS AND INTEGRATION OF RENEWABLE ENERGY 9 hours

Economic analysis: LCOE, payback, IRR, Energy storage technologies: batteries, pumped hydro, Grid integration issues and smart grids, Future trends: hybrid systems, microgrids, hydrogen. Concept of waste to wealth.

Course Outcomes:

At the end of the course, the student will be able to:

CO1: Explain the global and Indian energy scenario, sustainability concepts, and the role of renewable energy in achieving SDGs. (L2)

CO2: Analyze the working principles, components, and efficiency factors of solar and wind energy systems. (L3)

CO3: Illustrate the operation and site requirements of hydropower, wave, and tidal energy systems

with relevant case studies. (L2)

CO4: Apply basic design and performance analysis for bioenergy and geothermal energy systems considering environmental aspects. (L3)

CO5: Evaluate the techno-economic feasibility of renewable energy systems and their integration into smart grids with energy storage. (L3)

Textbooks:

1. Boyle, G. (2021). Renewable energy: Power for a sustainable future (4th ed.). Oxford University Press.
2. Twidell, J., & Weir, T. (2021). Renewable energy resources (4th ed.). Routledge.

2. Kalogirou, S. A. (2022). Solar energy engineering: Processes and systems (3rd ed.). Academic Press.
3. Lund, H. (2021). Renewable energy systems: A smart energy systems approach to the choice and modeling of 100% renewable solutions (4th ed.). Academic Press.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - I

23EEE301 ELECTRICAL SAFETY PRACTICES AND STANDARDS

Pre-requisite: 23EEE101

L T P C
3 0 0 3

Course Objectives:

1. To introduce the fundamentals of electrical safety, hazards of electric shock, arc, blast, and failure causes.
2. To explain the function and importance of electrical safety components, voltage classification, and protection devices.
3. To impart knowledge on grounding systems, bonding, and arc hazard categorization to ensure workplace safety.
4. To develop awareness about safety practices across various environments including residential, industrial, and special installations.
5. To familiarize students with relevant electrical safety standards, statutory regulations, and compliance requirements.

UNIT I INTRODUCTION TO ELECTRICAL SAFETY: 9 hours

Fundamentals of Electrical safety-Electric Shock- physiological effects of electric current - Safety requirements –Hazards of electricity- Arc - Blast- Causes for electrical failure.

UNIT II SAFETY COMPONENTS 9 hours

Introduction to conductors and insulators- voltage classification -safety against over voltages- safety against static electricity-Electrical safety equipment's - Fire extinguishers for electrical safety.

UNIT III GROUNDING 9 hours

General requirements for grounding and bonding- Definitions- System grounding-Equipment grounding - The Earth - Earthing practices- Determining safe approach distance-Determining arc hazard category.

UNIT IV SAFETY PRACTICES 9 hours

General first aid- Safety in handling hand held electrical appliances tools- Electrical safety in train stations-swimming pools, external lighting installations, medical locations-Case studies.

UNIT V STANDARDS FOR ELECTRICAL SAFETY 9 hours

Electricity Acts- Rules & regulations- Electrical standards-NFPA 70 E-OSHA standards-IEEE standards-National Electrical Code 2005 – National Electric Safety code NESC-Statutory requirements from electrical inspectorate.

Course Outcomes:

- CO1: Understand the fundamental principles of electrical safety and the physiological effects of electric shock-L2
- CO2: Apply knowledge of electrical safety components and protective devices to mitigate over-voltages and static hazards -L3
- CO3: Analyze equipment grounding, system grounding, and arc flash hazard categories in practical installations -L4
- CO4: Implement appropriate safety procedures in varied environments such as homes, public spaces, and medical areas- L4
- CO5: Evaluate the applicability and compliance of electrical systems with respect to national and international safety standards-L5

Textbooks:

1. Massimo A.G.Mitolo, —Electrical Safety of Low-Voltage Systems, McGraw Hill, USA, 2009.
2. Mohamed El-Sharkawi, —Electric Safety - Practice and Standards, CRC Press, USA, 2014.

3. Fordham Cooper, W., —Electrical Safety Engineering, Butterworth and Company, London, 1986.
4. John Cadick, Mary Capelli-Schellpfeffer, Dennis K. Neitzel, —Electrical Safety Hand book, McGraw-Hill, New York, USA, 4th edition, 2012.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective-I

23EEE302 INTRODUCTION TO MEMS

L	T	P	C
3	0	0	3

Pre-requisite 23EEE101

Course Objectives:

This course enables students to

1. To provide foundational knowledge on MEMS, its historical development, working principles, and scaling effects.
2. To understand the operation of micro sensors and actuators, and their integration into MEMS structures.
3. To explore MEMS materials and comprehend various microfabrication and micromachining techniques.
4. To develop competency in modeling MEMS devices using simulation methods such as FEM for sensor and actuator behavior.
5. To examine various applications of MEMS in different domains including RF, optical, microfluidic, and robotics systems.

UNIT I INTRODUCTION 9 hours

Overview – History and industry perspectives – Working principles – Mechanics and dynamics
Scaling law

UNIT II MICRO SENSORS & ACTUATORS 9 hours

Micro sensors: Pressure sensors, accelerometers, gyroscopes-Micro actuators: comb drive actuators – Micro-electromechanical systems.

UNIT III MICRO MANUFACTURING 9 hours

Materials for MEMS and Microsystems- Micro fabrication processes: Photolithography, Ion Implantation, Diffusion, Oxidation, Chemical Vapour Deposition- Physical Vapour Deposition, Micro manufacturing: Bulk micromachining, surface micromachining, LIGA Process- Packaging.

UNIT IV MODELING IN MEMS 9 hours

Micro system design: Finite Element Methods— Modeling of simulation – piezoelectric, Gyroscope

UNIT V MEMS APPLICATIONS 9 hours

Micro fluids-sensors for turbulence measurement and control, micro-actuators for flow control, RFMEMS- filters, Oscillators and phase shifters, Optical MEMS, micro robotics – Case studies

Course Outcomes:

Upon successful completion of the course, students will be able to

CO1: Explain the history, structure, operating principles, and scaling challenges of MEMS – L2

CO2: Describe the working of micro sensors and actuators and their roles in MEMS – L2

CO3: Analyze the materials and various microfabrication techniques used in MEMS manufacturing – L4

CO4: Apply modeling techniques like FEM to simulate MEMS device behavior such as gyroscopes and piezoelectric sensors – L3

CO5: Evaluate MEMS applications in RF, fluidics, optics, and robotics through real-world case studies – L5

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Open Elective – I

23ECE301 BIO-MEDICAL ELECTRONICS

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course provides the fundamental knowledge on applications of electronics in bio-medical signal measurements and processing, bio-medical instrumentation and imaging techniques.

Course Objectives:

This course enables students to

1. Acquire the basic knowledge on human physiology and biological transducers.
2. Learn about bio-electrodes and bio-amplifiers used in bio-signal acquisition.
3. Understand the working principle of bio-medical measuring instruments.
4. Study various types of imaging techniques used in medicine.
5. Learn the applications of medical instrumentation in designing artificial medical aids

UNIT I HUMAN PHYSIOLOGY AND BIOMEDICAL TRANSDUCERS 9 hours

Introduction to human physiology - Biomedical transducers for measuring displacement, velocity, force, acceleration, potential, dissolved ions and gases.

UNIT II BIO-ELECTRODES AND AMPLIFIERS 9 hours

Introduction to bio-potential, Bio-electrodes, Typical waveforms and characteristics of ECG, EMG and EEG, Bio-potential amplifiers for ECG, EMG and EEG – Lead systems and recording methods.

UNIT III BIOMEDICAL MEASURING INSTRUMENTS 9 hours

Measurement of blood pressure and temperature, Blood flow meter, Cardiac output measurement, Respiratory measurement, Blood cell counter, Impedance plethysmography.

UNIT IV MEDICAL IMAGING 9 hours

X-ray, Computed Tomography (CT), Magnetic Resonance Imaging (MRI), Nuclear imaging, Ultrasonic Imaging.

UNIT V PROSTHESES AND AIDS 9 hours

Pacemakers, Defibrillators, Heart-lung machine, Artificial kidney, Aids for the handicapped, Safety aspects

Course Outcomes:

Upon successful completion of the course, students will be able to

CO1: Understand the applications of biological transducers in medical field.

CO2: Analyze the design of bio-electrodes and bio-amplifiers.

CO3: Apply suitable measuring instruments to measure various medical parameters.

CO4: Understand and test various imaging techniques used in bio-medical diagnosis.

CO5: Analyze the applications of artificial medical aids.

Textbooks:

1. W.F. Ganong, Review of Medical Physiology, 26th Edition, Tata McGraw-Hill, New Delhi, 2019.

2. R.S.Khandpur, "Handbook of Biomedical Instrumentation", 2nd edition, Tata McGraw - Hill, New Delhi, 2005
3. Leslie Cromwell, "Biomedical Instrumentation and Measurement", Prentice-Hall, New Delhi, 2011.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – I

23ECE302 VLSI DESIGN

L	T	P	C
3	0	0	3

Pre-requisite: None

Course Description:

This course describes about various VLSI design methodologies, fundamentals of CMOS technology. It incorporates basics of MOSFET models, CMOS design rules, Design of VLSI Systems, combinational logic design, sequential logic design, logic families and VLSI Design flow.

Course Objectives:

This course enables students to

1. Study the fundamentals of CMOS circuits and its characteristics
2. Learn the design and realization of combinational digital circuits.
3. Learn the design and realization of sequential digital circuits.
4. Architectural choices and performance tradeoffs involved in designing and realizing the circuits in CMOS technology are discussed
5. Learn the different FPGA architectures and testability of VLSI circuits.

UNIT I INTRODUCTION TO MOS TRANSISTOR

9 hours

MOS Transistor, CMOS logic, Inverter, Pass Transistor, Transmission gate, Layout Design Rules, Gate Layouts, Stick Diagrams, Long-Channel I-V Characteristics, C-V Characteristics, Non ideal I-V Effects, DC Transfer characteristics, RC Delay Model, Elmore Delay, Linear Delay Model, Logical effort, Parasitic Delay, Delay in Logic Gate, Scaling.

UNIT II COMBINATIONAL MOS LOGIC CIRCUITS

9 hours

Circuit Families: Static CMOS, Ratioed Circuits, Cascode Voltage Switch Logic, Dynamic Circuits, Pass Transistor Logic, Transmission Gates, Domino, Dual Rail Domino, CPL, DCVSPG, DPL, Circuit Pitfalls.

Power: Dynamic Power, Static Power, Low Power Architecture.

UNIT III SEQUENTIAL CIRCUIT DESIGN

9 hours

Static latches and Registers, Dynamic latches and Registers, Pulse Registers, Sense Amplifier Based Register, Pipelining, Schmitt Trigger, Monostable Sequential Circuits, Astable Sequential Circuits.

Timing Issues: Timing Classification Of Digital System, Synchronous Design.

UNIT IV DESIGN OF ARITHMETIC BUILDING BLOCKS AND SUBSYSTEM

9 hours

Arithmetic Building Blocks: Data Paths, Adders, Multipliers, Shifters, ALUs, power and speed tradeoffs, Case Study: Design as a tradeoff.

Designing Memory and Array structures: Memory Architectures and Building Blocks, Memory Core, Memory Peripheral Circuitry.

UNIT V IMPLEMENTATION STRATEGIES AND TESTING

9 hours

FPGA Building Block Architectures, FPGA Interconnect Routing Procedures. Design for Testability: Ad Hoc Testing, Scan Design, BIST, IDDQ Testing, Design for Manufacturability, Boundary Scan

Course Outcomes:

Upon successful completion of the course, students will be able to

CO1: Realize the concepts of digital building blocks using MOS transistor.

CO2: Design combinational MOS circuits and power strategies

CO3: Design and construct Sequential Circuits and Timing systems.

CO4: Design arithmetic building blocks and memory subsystems.

CO5: Apply and implement FPGA design flow and testing.

2. William Stallings, “Operating Systems – Internals and Design Principles”, 7th Edition, Prentice Hall, 2011.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

OPEN ELECTIVE – IV

Open Elective - IV

23PHY304 SMART MATERIALS AND DEVICES

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Description:

This course introduces the fundamentals and evolution of smart materials and their responsive behavior to external stimuli. It covers key types such as shape memory, chromoactive, magnetorheological, photoactive materials, and polymer composites. The course explores important properties including electrical, optical, dielectric, piezoelectric, and magnetic characteristics. Students learn synthesis techniques like sol-gel, chemical vapor deposition, and thin-film fabrication methods. It also includes characterization techniques and applications in devices such as MEMS, sensors, actuators, and robotic systems.

Course Objectives:

1. To provide exposure to smart materials and their engineering applications.
2. To impart knowledge on the basics and phenomenon behind the working of smart materials
3. To explain the properties exhibited by smart materials
4. To educate various techniques used to synthesize and characterize smart materials
5. To identify the required smart material for distinct applications/devices

UNIT I INTRODUCTION TO SMART MATERIALS

9 hours

Historical account of the discovery and development of smart materials, Shape memory materials, chromoactive materials, magnetorheological materials, photoactive materials, Polymers and polymer composites (Basics).

UNIT II PROPERTIES OF SMART MATERIALS

9 hours

Optical, Electrical, Dielectric, Piezoelectric, Ferroelectric, Pyroelectric and Magnetic properties of smart materials.

UNIT III SYNTHESIS OF SMART MATERIALS

9 hours

Chemical route: Chemical vapour deposition, Sol-gel technique, Hydrothermal method, Mechanical alloying and Thin film deposition techniques: Chemical etching, Spray pyrolysis.

UNIT IV CHARACTERIZATION TECHNIQUES

9 hours

Powder X-ray diffraction, Raman spectroscopy (RS), UV-Visible spectroscopy, Scanning electron microscopy (SEM), Transmission electron microscopy (TEM), Atomic force microscopy (AFM).

UNIT V SMART MATERIALS BASED DEVICES

9 hours

Devices based on smart materials: Shape memory alloys in robotic hands, piezoelectric based devices, MEMS and intelligent devices.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- CO1:** Identify key discoveries that led to modern applications of shape memory materials, describe the two phases in shape memory alloys.
- CO2:** Describe how different external stimuli (light, electricity, heat, stress, and magnetism) influence smart material properties.

CO3: Summarize various types of synthesis of smart materials

CO4: Analyze various characterization techniques used for smart materials

CO5: Interpret the importance of smart materials in various devices

Textbooks:

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

23CHE304 INTRODUCTION TO NANO SCIENCE AND TECHNOLOGY

L	T	P	C
3	0	0	3

Pre-requisite Nil

Course Description:

This is primarily a lecture course which brings together relevant knowledge from the disciplines of physics and chemistry to give students a fundamental understanding of the integrated multidisciplinary nature of Nanotechnology.

Course Objectives:

This course enables students to

1. To understand the emergence of nanoscience and technology through history.
2. The various process techniques available for nanostructured materials.
3. The role of nanotechnology in electronics how basic nano-systems work
4. To use physical reasoning to develop simple nanoscale models to interpret the behaviour of such physical systems.

UNIT I	MOLECULE TO MATERIALS: BASICS OF NANOTECHNOLOGY	8 hours
---------------	--	----------------

Atomic Structures: Rutherford and Bohr's model of atom. Bohr's model to Quantum: Wave function, Uncertainty principle, Orbital quantum numbers, Shape of the orbitals. Types of simple crystal structures, defects in nanocrystals. History & emergence (Feynman to present) of Nanoscience and Nanotechnology, Challenges in Nanotechnology.

UNIT II	TYPES AND SYNTHESIS OF NANOSTRUCTURES	10 hours
----------------	--	-----------------

Definition of a Nano system - Zero Dimensional (0D), One Dimensional (1D) - Two Dimensional (2D) - Three Dimensional (3D) nanostructured materials. Top-down and Bottom-up approaches, Nanoscale building blocks. Synthesis of Nanomaterials – Physical & Chemical methods: Chemical Vapour Deposition (CVD), Atomic Layer Deposition (ALD), Chemical Reduction, Electrochemical, Co-precipitation, Emulsion synthesis, Template based synthesis, Sol-Gel, Hydrothermal, Role of plants in Nanoparticle (NP) synthesis.

UNIT III	PROPERTIES OF NANOMATERIAL	8 hours
-----------------	-----------------------------------	----------------

Thermal, Mechanical, Optical, Electrical and Magnetic properties of nanomaterials (Metal oxides, Ceramics, Composites, Semiconductors) Carbon age materials: CNTs, and other Carbon-based materials). Relationship between surface effects on the properties of nanomaterials.

UNIT IV	CHARACTERIZATION OF NANOMATERIALS	10 hours
----------------	--	-----------------

Crystal Structure – XR; Composition: XPS; Optical & Electron microscopes: Scanning probe microscope, Scanning tunneling microscopes, Atomic force microscopes (AFM), Scanning electron microscope (SEM), Transmission electron microscope (TEM); Magnetic characterization (SQUID).

UNIT V APPLICATIONS OF NANOMATERIALS

9 hours

Molecular electronics and nano-electronics – Quantum electronic devices - CNT based transistor and Field Emission Display - Biological applications - Biochemical sensor - Membrane based water purification, Target based drug delivery system, LED applications.

Course Outcomes:

Upon completion of this course the students will be able to:

CO1: Understand the correlation between atomic, molecular structures and nanomaterials

CO2: Classify the types and synthesis the nanomaterials based on the needs of the society and environment.

CO3: Infer and interpret the properties of nanomaterials

CO4: Apply the knowledge of characterization tools towards making the sustainable engineering products.

CO5: Illustrate the application of various nanomaterials in daily life, industry towards the sustainable development.

Open Elective - IV

23CHE305 WATER POLLUTION AND ITS MANAGEMENT

L	T	P	C
3	0	0	3

Pre-requisite Nil

Course Description:

This is primarily a lecture course which brings together relevant knowledge from the disciplines of physics and chemistry to give students a fundamental understanding of the integrated multidisciplinary nature of Nanotechnology.

Course Objectives:

This course enables students

1. To learn the fundamental concepts in the field of water pollution
2. To know the standards and importance of water pollution
3. To study the various industrial effects and mitigation management
4. To learn the importance of methods of control of water pollution
5. To study the various water control act and functions of regulatory boards

UNIT I SOURCES & CHARACTERISTICS OF WATER POLLUTION 9 hours

Water and wastewater pollution – Sources & Types of water and wastewater pollution – Physical, chemical and biological characteristics – Effects of water pollution. Drinking water - quality standards – WHO, ICMR, ICAR, Central and State quality control norms.

UNIT II WATER QUALITY & TESTING PROCEDURES 9 hours

Quality of surface water – Water quality in flowing water, Water quality in impounded water, Ground water quality – Testing procedures of important water quality parameters (pH, Electrical Conductivity, Total Dissolved Solids, Calcium, Magnesium, Chloride, Sulfate, Sodium, Potassium, Dissolved Oxygen, Iron, Total Kjeldahl nitrogen, FRC, FAC).

UNIT III INDUSTRIAL ACTIVITY & MITIGATION MEASURES 9 hours

Role of water in different industries – Effluent discharge characteristics – Discharge Standards for River and Streams – Role of stakeholders, public, NGOs, Government in Protection of Water bodies – Control measures – Industrial water contamination due to industries, ETP, Case Studies (Dye Industry, Pharmaceutical Industry, Cement Industry)

UNIT IV WATER POLLUTION REGULATION 9 hours

Administrative regulations under recent legislations in water pollution control. Water (Prevention & Control of Pollution) Act 1974 and its Amendment Act 1988, Rules 1975, Cess Act 1977 and its Amendment Act 1991.

UNIT V FUNCTIONS AND MANAGEMENT OF REGULATORY BOARDS 9 hours

Sustainable Development, Rain Water Harvesting – Methods – Water Pollution – Causes and Effects – Role of Regulatory bodies and Local bodies – CPCB – SPCB etc. – Case studies related to Effective Water Management.

Course Outcomes:

Upon completion of this course the students will be able to:

CO1: Understand the fundamental concepts with respect to water pollution (**L2**)

CO2: Recognize the standards and importance of water pollution (**L1**)

CO3: Understand the various industrial effects and mitigation management of pollution (**L2**)

CO4: Apply the different methods of control of water pollution (**L3**)

CO5: Awareness of the various water control acts and functions of regulatory boards (**L2**)

Textbook(s)

3. S.K. Agarwal, Water Pollution, APH Publishing, 2005.
4. Anita Singh (Editor), Madhoolika Agrawal (Editor), Shashi Bhushan Agrawal (Editor), Water Pollution and Management Practices, Springer Verlag, Singapore, 1st Edition, 2021.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Open Elective - IV

23CE303 ENVIRONMENTAL IMPACT ASSESSMENT

L T P C
3 0 0 3

Pre-requisites:

Course Description:

The course will focus on Basic concept of Environmental Impact Assessment (EIA), EIA Methodologies, Impact of Developmental Activities and Land use in soil, water, and vegetation, Environmental Audit, Post Audit activities, and the Environmental pollution Acts.

Course Objectives:

1. To impart knowledge on Environmental management and Environmental Impact Assessment.
2. To identify key environmental elements like soil, water, air, and Biological Environment.
3. To understand the impact of development activities on vegetation and wildlife, including the causes and effects of deforestation.
4. To give the student the brief knowledge about various legislations and audit protocols.
5. To give student knowledge about the framing of environmental audit through case studies

UNIT I CONCEPTS AND METHODOLOGIES IN EIA 9 hours

Introduction to Environmental Impact Assessment, objectives and importance of EIA, factors affecting EIA, Preparation of environmental base map, classification of environmental parameters, criteria for selection of EIA methodologies including ad-hoc methods, matrix methods, network method, environmental media quality index method, overlay methods and cost-benefit analysis. Steps in EIA process including screening, scoping, impact prediction, mitigation measures, environmental management, monitoring and audit, with focus on statutory requirements and compliance procedures.

UNIT II IMPACT OF DEVELOPMENTAL ACTIVITIES AND CLEARANCE PROCEDURES 9 hours

Introduction and methodology for assessment of impacts on soil, groundwater, surface water, air, noise, biological and socioeconomic environment. Environmental clearance procedures for infrastructure projects including stages of environmental clearance, preparation and appraisal of EIA reports, statutory approvals and regulatory requirements. Project-specific clearance procedures for highways, airports, industrial corridors, water resources and urban infrastructure projects, highlighting practical implementation aspects.

UNIT III IMPACT ON VEGETATION, WILDLIFE AND PROJECT-SPECIFIC CONSIDERATIONS 9 hours

Assessment of impacts of developmental activities on vegetation and wildlife, environmental impact of deforestation, causes and effects of deforestation. Integration of environmental safeguards in large-scale infrastructure projects with emphasis on sector-specific environmental concerns such as transportation corridors, airport expansions, industrial development and water resource projects.

UNIT IV ENVIRONMENTAL MANAGEMENT, AUDIT AND COMPLIANCE FRAMEWORK 9 hours

Introduction and objectives of environmental management system. Environmental audit concepts, types of environmental audit, audit protocol, stages of environmental audit including onsite activities, evaluation of audit data and preparation of audit reports. Post-clearance monitoring requirements, compliance verification, environmental performance evaluation and reporting mechanisms.

UNIT V ENVIRONMENTAL LEGISLATIONS, CONSENTS AND REGULATORY FRAMEWORK

9 hours

Detailed study of environmental legislations including Water Act 1974, Air Act 1981, Wildlife Protection Act 1972, Forest Conservation Act 1980, Biological Diversity Act 2002, Environment Protection Act 1986 and Indian Forest Act 1927. Procedures for obtaining consent to establish (CTE) and consent to operate (CTO) from pollution control authorities, regulatory compliance requirements and legal provisions applicable to infrastructure projects.

Course Outcomes:

After successful completion of the course, student will be able to

- CO1:** Develop a base map and classify environmental parameters for impact evaluation and analysis using different EIA methods such as ad-hoc, matrix, network, overlay, and cost/benefit analysis.
- CO2:** Assess the significance of impact and identify and incorporate appropriate mitigation measures for developmental activities on different environmental media, including soil, groundwater, surface water, air, and biological environment.
- CO3:** Evaluate the impact of deforestation on vegetation and wildlife and analyse the causes and effects of deforestation.
- CO4:** Apply the principles and practices of environmental audit, including onsite activities, evaluation of audit data, preparation of audit reports, and post-audit activities, for compliance with environmental legislation.
- CO5:** Water Act-1974, Air Act-1981, Wild Life Act-1972, Indian Forest Conservation Act 1980, National Green Tribunal Act-2010, and Biological Diversity Act-2002, to control environmental pollution.

Textbooks:

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23CE304 BUILDING TECHNOLOGY

		L	T	P	C
Pre-requisites:	23CME101	3	0	0	3

Course Description:

This course provides a comprehensive understanding of modern construction practices, materials, and management techniques essential for civil engineering professionals. It covers planning principles, prefabrication, temporary structures, special materials, building services, and construction equipment.

Course Objectives:

1. To understand the principles of planning and building bye-laws.
2. To understand the purpose and types of temporary structures used in construction.
3. To study special concretes such as FRC, ferrocement, and polymeric concrete.
4. To understand basic building services including electrical wiring, water supply, and drainage.
5. To understand the selection criteria for construction equipment.

UNIT I PLANNING & PREFABRICATION

9 hours

Principles of Planning - regulations and byelaws, different codes of practice – Indian, American & British codes of practice – Preparation of layouts – Orientation and marking of Buildings- details and sequence of construction – co-ordination – site clearance - Earthwork excavations – timbering – Dewatering Principles of prefabrication – Types – materials for prefabrication.

UNIT II TEMPORARY STRUCTURE & SHELL STRUCTURES

9 hours

Temporary shed - centering and shuttering – sheet piles, scaffoldings, shuttering forms – special forms for shells – slip form, moving form- shoring, and under pinning.

UNIT III PRESERVATIVES & SPECIAL MATERIALS

9 hours

Plastering - types – Paints – varnishes – distempers – wall cladding. Polymers (PVC Sheets, Pipes GFRP) ceramics & Clay Products - Refractory – Special Concrete - FRC, ferrocement& polymeric concrete – geotextiles.

UNIT IV BUILDING SERVICES

9 hours

Electric Wiring – Water Supply – Drainage- Air Conditioning – Ventilation – ramps, Escalators, Lifts, Stairs. Water Proofing - Thermal Insulation - Termite proofing - Acoustic Treatment (Sound Conditioning) - Fire Protection - Intelligent Buildings

UNIT V CONSTRUCTION EQUIPMENTS

9 hours

Selection of equipment for earth work, concreting, paving, pile erection- Material handling, hauling and erection of structures – Dewatering and pumping equipments.

Course Outcomes:

At the end of this course, students will demonstrate the ability to

CO1: Select appropriate finishing materials for different surfaces.

CO2: Select appropriate temporary sheds and support systems for construction sites.

CO3: Apply modern materials like polymers and geotextiles in construction.

CO4: Implement waterproofing, termite proofing, and acoustic treatments.

CO5: Optimize equipment selection for cost-effective and timely project completion.

Textbooks:

1. Arora S.P. and Bindra S.P. “Building Construction, Planning Techniques and Materials of Construction”. Dhanapat Rai and Sons.
2. Sheety, M.S, Concrete Technology, Theory and Practice, S. Chand and Company Ltd, New Delhi, 2005.

Reference Books:

1. Chudley R “Construction Technology”, (Vol.I,II,III,&IV) ELBS / Longman (2nd Edition).
2. Jha J and Sinha S.K. “Construction and Foundation Engineering” Khanna Publishers, 1993.
3. Peurifoy R.L.,”Formwork for concrete structures”, McGraw Hill Co., 199

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23CE305 SUSTAINABILITY IN ENGINEERING PRACTICES

L T P C

Pre-requisites:

3 0 0 3

Course Objectives:

Upon successful completion of the course, the student will be able to:

1. To understand the concepts of sustainable development and global frameworks like SDGs.
2. To identify major environmental issues and understand environmental legislations in India.
3. To apply sustainability assessment tools such as LCA and EIA.
4. To analyze sustainable practices in buildings, transportation, and urban systems.
5. To promote resource efficiency, renewable energy use, and sustainable decision-making in engineering practices.

UNIT I INTRODUCTION TO SUSTAINABLE ENGINEERING

9 hours

Sustainable Development – Definition, principles, and need – Overview of global frameworks: Agenda 21, Sustainable Development Goals (SDGs) – Role of engineering in sustainability – Basic sustainability models: Egg model, Atkisson pyramid – Major threats to sustainability

UNIT II ENVIRONMENTAL ETHICS AND LEGISLATIONS

9 hours

Environmental laws in India: Water Act, Air Act, Environment Protection Act (basic overview) – Local environmental issues: solid waste management, 3R concept – Global issues: climate change, global warming, air and water pollution – Carbon footprint

UNIT III TOOLS FOR SUSTAINABILITY

9 hours

Triple Bottom line - Environmental Management System (EMS) – ISO 14000 (concept) – Life Cycle Assessment (LCA): stages, techniques and applications - Circular economy - Carbon accounting

UNIT IV SUSTAINABLE HABITAT

9 hours

Green building concept and benefits – Green building rating systems: GRIHA and LEED – Energy-efficient buildings – Basics of sustainable cities and transport systems – Case studies

UNIT V SUSTAINABLE INDUSTRIALIZATION AND URBANIZATION

9 hours

Sustainable industrial practices: Air and water pollution prevention, industrial ecology (basic concept) – Renewable energy resources: solar, wind, biogas, small hydro – Introduction to green technologies: green energy, green construction, green computing

Course Outcomes:

At the end of the course, the student will be able to

- CO1:** Explain sustainable development and global sustainability frameworks
CO2: Describe environmental issues and relevant legislations
CO3: Apply tools like LCA and EIA for sustainability analysis
CO4: Analyze sustainable practices in buildings and urban systems
CO5: Explain renewable energy resources and green technologies

Textbooks:

1. R.L. Ragand Lekshmi Dinachandran Remesh. Introduction to Sustainable Engineering. 2nd Ed., PHI Learning Pvt. Ltd., 2016.

2. A.S.Bradley, A.O.Adebayo, P.Maria. Engineering applications in sustainable design and development, 1st Ed., Cengage learning, 2016.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23ME303 TOTAL QUALITY MANAGEMENT

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Description:

Total quality management (TQM) is a philosophy, methodology and system of tools aimed to create and maintain mechanism of organization's continuous improvement. It involves all departments and employees for the improvement of processes and products. TQM encompasses various principles, techniques, and tools for identifying and solving problems, fostering a culture of quality, promoting teamwork, and striving for excellence in all areas of the organization. The goal of TQM is to achieve sustainable and long-term success by consistently delivering high-quality products and services that meet or exceed customer expectations while improving overall organizational performance.

Course Objectives:

1. Study comprehensive knowledge about the principles, practices, tools and techniques of total quality management.
2. Gain knowledge on leadership, customer satisfaction, addressing customer complaints, team work, employee involvement, related to customer and supplier partnership.
3. Gather information on various tools and techniques, concept on Six Sigma, bench marking and failure Mode Effective Analysis (FMEA).
4. Know the importance of Quality circle, Quality Function Deployment, Taguchi design and case studies related to TQM.
5. Facilitate the understanding of standards of quality.

UNIT I INTRODUCTION

9 hours

Introduction: Definition of Quality, Dimensions of Quality, Definition of Total quality management, Quality Planning, Quality costs – Analysis, Techniques for Quality costs, Basic concepts of Total Quality Management. Deming Philosophy, Barriers of TQM Implementation, Benefits of TQM.

UNIT II TQM PRINCIPLES

9 hours

TQM principles - Strategic quality planning, Quality statements – Customer focus – Customer orientation, Customer satisfaction, Customer complaints, Customer retention – Role of Leadership and Commitment in Quality Deployment, Team Building, Motivation and Rewards, Total Employee Empowerment, Performance appraisal - Continuous process improvement – Supplier partnership – Partnering, Supplier selection.

UNIT III TOOLS OF TQM

9 hours

TQM Tools: Benchmarking – Reasons to Benchmark, Benchmarking Process, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA, The seven tools of quality, Process capability, Concept of Six Sigma, New Seven management tools, Case studies.

UNIT IV TQM TECHNIQUES

9 hours

Quality circles – Quality Function Deployment (QFD) – House of Quality – Design of Experiments – Taguchi quality engineering – Orthogonal Arrays – Signal to Noise Ratio – TPM – Concepts, improvement needs – Cost of Quality – Performance measures.

UNIT V IMPELMENTATION OF TQM

9 hours

Introduction – Benefits of ISO Registration – ISO 9000 Series of Standards –Implementation – Environmental Management System: Introduction – ISO 14000 Series Standards – Concepts of ISO 14001 – Requirements of ISO 14001, Real Case studies on TQM principles followed by Indian Industries.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

CO1: Understand the various principles and practices of TQM to achieve quality.

CO2: Identify the various statistical approaches for Total Quality Control.

CO3: Demonstrate the TQM tools for continuous process improvement.

CO4: Adopt the importance of ISO and Quality systems.

CO5: Make use of the concepts of TQM to solve case studies.

Textbooks:

1. Dale H Besterfield, Total Quality Management, Fourth Edition, Pearson Education, 2015.
2. Subburaj Ramaswamy, Total Quality Management, Tata Mcgraw Hill Publishing Company Ltd., 2005.

3. Suganthi,L and Anand Samuel, Total Quality Management, Prentice Hall (India) Pvt. Ltd. (2006).

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

23ME304 ADDITIVE MANUFACTURING

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Description:

This course provides an introduction to additive manufacturing technologies, focusing on their principles, processes, materials, and industrial applications. It covers various additive manufacturing techniques such as FDM, SLA, SLS, and metal-based processes, along with material selection and process parameters. The course also emphasizes CAD modeling for additive manufacturing, STL file preparation, slicing, and preprocessing techniques. Post-processing methods, quality control, and inspection of printed parts are discussed. The course enables students from various engineering disciplines to understand the potential of additive manufacturing in modern product development and production systems.

Course Objectives:

1. Understand the underlying principles of additive manufacturing.
2. Describe major additive manufacturing processes and their differences.
3. Identify suitable materials and process parameters for different applications.
4. Use CAD tools to prepare and export files for AM systems.
5. Apply post-processing techniques and quality control for AM parts

UNIT I INTRODUCTION TO ADDITIVE MANUFACTURING

9 hours

Definition and fundamentals of Additive Manufacturing (AM), Evolution of AM and comparison with conventional manufacturing, Process chain in AM (concept to finished part), Classification of AM processes, Advantages, limitations, and applications across industries (Automotive, Aerospace, Medical, Consumer products).

UNIT II ADDITIVE MANUFACTURING PROCESSES

9 hours

Stereolithography (SLA), Fused Deposition Modeling (FDM), Selective Laser Sintering (SLS), Selective Laser Melting (SLM), Laminated Object Manufacturing (LOM), Binder Jetting, Electron Beam Melting (EBM), Overview of wire-based and metal AM processes, Process parameters, advantages, and limitations of each technology.

UNIT III MATERIALS FOR ADDITIVE MANUFACTURING

9 hours

Materials used in AM: Polymers, Metals, Ceramics, Composites, Material forms: filaments, powders, resins, wires, Material properties and their influence on process selection, Introduction to material behavior during layer-by-layer deposition, Emerging materials in additive manufacturing

UNIT IV CAD, FILE HANDLING & PRE-PROCESSING

9 hours

CAD modelling for AM, STL and other AM file formats: generation and issues, Data translation and conversion, STL file repair and preparation, Slicing fundamentals and build file generation, Part orientation and support generation strategies, Software tools used in pre-processing for 3D printing.

UNIT V POST-PROCESSING & QUALITY

9 hours

Post-processing techniques: heat treatment, surface finishing, support removal Inspection, testing, and quality control of printed parts, Common defects and remedial practices

Course Outcomes:

Upon successful completion of this course, the student will be able to:

CO1: Explain fundamental AM processes and their principles.

CO2: Compare various AM technologies with respect to process characteristics.

CO3: Select appropriate materials and process parameters for specific AM applications.

CO4: Prepare and export CAD models for additive manufacturing.

CO5: Apply post-processing and inspection techniques to Additive Manufactured parts.

Textbooks:

1. Gibson, I., Rosen, D.W., & Stucker, B., Additive Manufacturing Technologies: Rapid Prototyping to Direct Digital Manufacturing, Springer, 3rd Edition (2021).

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

23ME305 REFRIGERATION AND AIR CONDITIONING

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Objectives:

This course is designed to:

1. Understand the fundamental concepts, performance metrics, and cycle analysis of vapour compression refrigeration systems.
2. Study the functional components of VCR systems and the selection criteria of refrigerants based on thermophysical and environmental properties.
3. Explore the working principles and applications of vapour absorption and alternative refrigeration systems.
4. Introduce psychrometric concepts, heat load analysis, and various air conditioning configurations.
5. Learn about air conditioning components and human thermal comfort requirements for effective HVAC design.

UNIT I INTRODUCTION TO REFRIGERATION AND VCR SYSTEM 9 hours

Introduction to Refrigeration, Necessity and Applications, Unit of Refrigeration, COP, EER, Methods of refrigeration.

Vapour compression refrigeration system: Working principle, effect of sub cooling and super heating, ideal and actual cycle, multi-stage, cascading VCR systems, numerical problems.

UNIT II COMPONENTS OF VCR SYSTEM AND REFRIGERANTS 9 hours

Vapour Compression Refrigeration System Components: General classification of compressors, condensers, evaporators and expansion devices and working principles.

Refrigerants: Desirable properties, Classification of refrigerants, Nomenclature, Environmental impact.

UNIT III VAR SYSTEM AND OTHER REFRIGERATION SYSTEMS 9 hours

Vapour Absorption Refrigeration system: Introduction to Vapour absorption refrigeration system, Lithium-Bromide absorption refrigeration system, three fluid absorption refrigeration system and comparison of compression and absorption refrigeration systems.

Other Refrigeration systems: Working principles of Steam jet refrigeration system, Thermoelectric refrigeration system, Solar refrigeration system, Vortex & Pulse tube refrigeration system.

UNIT IV INTRODUCTION TO AIR CONDITIONING SYSTEMS 9 hours

Psychrometric Properties & Processes, Characterization of Sensible and Latent Heat Loads, Need for Ventilation, Consideration of Infiltrated Air, Heat Load Concepts.

Air Conditioning Systems: Air Cooler (Evaporative Cooling), Window, Split, Summer, Winter, Year-Round, Central Air Conditioning Systems.

UNIT V AIR CONDITIONING EQUIPMENT

9 hours

Air Conditioning Equipment: Humidifiers, Dehumidifiers, Air Filters, Fans and Blowers. Inverter Technology in Air conditioners.

Human Comfort: Requirements of Temperature, Humidity and Concept of Effective Temperature, Comfort Chart. Heat Pump, Heat Sources, Different Heat Pump Circuits.

Course Outcomes:

At the end of the course, the student will be able to:

- CO1:** Apply thermodynamic principles to evaluate the performance of vapor compression refrigeration systems including subcooling and superheating effects. (L3)
- CO2:** Explain the function and classification of VCR components and identify suitable refrigerants based on their properties and environmental impact. (L2)
- CO3:** Analyze and compare vapour absorption refrigeration systems with alternative refrigeration technologies for specific applications. (L4)
- CO4:** Apply psychrometric principles to assess heat loads and select appropriate air conditioning systems for various climate conditions. (L3)
- CO5:** Describe the role of air conditioning equipment and heat pump systems in achieving indoor human comfort conditions. (L2)

Textbooks:

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23EEE303 ROBOTICS

Pre-requisite: Nil

L	T	P	C
3	0	0	3

Course Objectives:

The objectives of the course are to make the students learn about:

Robotics is an interdisciplinary area ranging from mechanical & electrical component design to advanced sensor technology, incorporating computer systems and Artificial Intelligence (AI). With advances in AI-techniques & computational power in recent years, it has become one of the most interesting areas for multidisciplinary research, with lots of commercial applications already in market.

UNIT I INTRODUCTION, TRANSFORMATION AND MAPPING 9 hours

Evolution of Robots and Robotics, Laws of Robotics, Advancement in Robots, Robot Anatomy, Human Arm Characteristics, Design and Control Issues, Manipulation and Control, Sensors and Vision, Robotic Programming and Future Prospects. Coordinate Frames, Object Description in Space, Transformation of Vectors, Inverting a homogenous transform, Fundamental Rotation Matrices.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS 9 hours

Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers. Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION 9 hours

Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors, binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.

UNIT IV ROBOT KINEMATICS 9 hours

Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems.

UNIT V ROBOT PROGRAMMING, IMPLEMENTATION AND ECONOMICS 9 hours

Commands, Sensor Commands, End Effector commands and simple Programs. RGV, AGV; Implementation of Robots in Industries-Variety Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

Course Outcomes:

After completing this Unit, students will be able to

CO1: Understand the fundamentals of Robotics.

CO2: Analyze the robot drive system.

CO3: Understand the various sensors and actuators.

CO4: Analyze the mechanical structure and notations kinematic model.

CO5: Implement the basic commands for robots.

Textbooks:

1. Mittal, R. K. and Nagrath, I.J., Robotic and Control, Tata McGraw Hill, New Delhi, 2003.
2. Arshdeep Bahga, Vijay Madisetti, Internet of Things: A Hands-On Approach, Universities Press, 2015. ISBN: 978-8173719547

Reference Books:

1. Fu, K.S., Gonzalez, R.C., and Lee, C.S.G., Robotics Control, Sensing, Vision and Intelligence, McGraw Hill, 1988.

3. Paul, R.P., Robot Manipulator: Mathematics Programming & Control. MIT Press, 1981.
4. Pugh, A., Robot Sensors, Vision Vol.-I. Springer Verlag, 1986.
5. Groover, M.P., Industrial Robotics Technology, programming & Application, McGraw Hill

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23EEE304 SMART GRID TECHNOLOGIES

L T P C
3 0 0 3

Pre-requisite: 23EEE101

Course Objectives:

The objectives of the course are to make the students learn about:

1. To understand the evolution, need, architecture, and enabling technologies of smart grids.
2. To analyze synchro phasor technology and the operation of wide area monitoring systems using PMU and PDC.
3. To apply smart metering concepts including AMR, AMI, and demand side management techniques.
4. To evaluate communication technologies and protocols used in smart grid systems.
5. To design smart grid applications with renewable integration, energy storage, and cybersecurity measures.

UNIT I INTRODUCTION TO SMART GRID

9 hours

Evolution of Electric Grid – Need for Smart Grid – Difference between conventional & smart grid – Overview of enabling technologies – International experience in Smart Grid deployment efforts – Smart Grid road map for India – Smart Grid Architecture

UNIT II WIDE AREA MONITORING SYSTEM

9 hours

Fundamentals of Synchro phasor Technology – concept and benefits of Wide Area Monitoring System – Structure and functions of Phasor Measuring Unit (PMU) and Phasor Data Concentrator (PDC) – Road Map for Synchrophasor applications (NAPSI) – Operational experience and Blackout analysis using PMU - Case study on PMU.

UNIT III SMART METERS

9 hours

Features and functions of Smart Meters – Functional specification – category of Smart Meters – Automatic Meter Reading (AMR) and Advanced Metering Infrastructure (AMI) drivers and benefits – AMI protocol – Demand Side Integration: Peak load, Outage and Power Quality management.

UNIT IV INFORMATION AND COMMUNICATION TECHNOLOGY

9 hours

Overview of Smart Grid Communication system – Modulation and Demodulation Techniques: Radio Communication – Mobile Communication – Power Line Communication – Optical Fibre Communication – Communication Protocol for Smart Grid

UNIT V SMART GRID APPLICATIONS AND CYBER SECURITY

9 hours

Applications : Overview and concept of Renewable Integration – Introduction to distributed generation - Role of Protective Relaying in Smart Grid – House Area Network – Advanced Energy Storage Technology: Flow battery – Fuel cell – SMES – Super capacitors – Plug – in Hybrid electric Vehicles - Cyber Security: Security issues in DG, Distribution Automation, AMI, Electric Vehicle Management Systems – Approach to assessment of smart grid cyber security risks – Methodologies. Cyber Security requirements – Smart Grid Information Model.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understanding the Concept and Evolution of Smart Grids. L2

CO2: Analyzing Wide Area Monitoring System and Synchrophasor Technology. L4

CO3: Applying Smart Metering and Advanced Metering Infrastructure (AMI) Concepts. L3

CO4: Evaluating Information and Communication Technology (ICT) Systems in Smart Grids. L5

CO5: Designing Smart Grid Applications and Cybersecurity Measures. L6

Textbooks:

1. James Momoh, "SMART GRID : Fundamentals of Design and Analysis", John Wiley and Sons, New York, 2012.
2. Janaka Ekanayake, Nick Jenkins, Kithsiri Liyanage, Jianzhong Wu, Akihiko Yokoyama, "Smart Grid: Technology and Applications", John Wiley & Sons, New Jersey, 2012

Reference Books:

2. Fereidoon.P.Sioshansi, "Smart Grid – Integrating Renewable, Distributed and Efficient Energy", 1st Edition, Academic Press, USA, 2011.
Reactive Power Control in Electric Systems, T J E Miller, John Wiley & Sons, New York, 1982.
3. Phadke A G, Thorp J S, "Synchronized Phasor Measurements and Their Applications", 1st Edition, Springer, Newyork, 2012.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23ECE303 EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Objectives:

1. Introduce the building blocks in embedded hardware and firmware design
2. Explore Real-Time Operating Systems (RTOS) and their implementation.
3. Understand multitasking, scheduling, and real-time constraints.
4. Design embedded applications using ARM Cortex architecture.
5. Apply software/hardware co-design and UML modeling techniques.

UNIT I FUNDAMENTALS OF EMBEDDED SYSTEMS 9 hours

Embedded System Overview & Characteristics, Embedded vs General Purpose Systems, Embedded Processors: RISC, CISC, DSP, ARM Cortex-M, Memory Architecture: Flash, SRAM, EEPROM; Sensors, Actuators, ADC / DAC Interfaces, Case Studies of Consumer and Industrial Embedded Systems

UNIT II EMBEDDED SOFTWARE DEVELOPMENT & RTOS BASICS 9 hours

Embedded C: Startup Code, Interrupts, GPIOs, Timers; IDEs, Cross Compilers, Linkers, Debuggers, Operating System Concepts, Real-Time Operating System (RTOS) Introduction, RTOS Concepts: Task Scheduling, Context Switching, Preemptive vs Cooperative Scheduling, Task Creation, Priorities, Stack Management, Multitasking: Processes, Threads, Scheduling (Round Robin, Priority-based), RTOS Examples: FreeRTOS, Zephyr RTOS, Mbed OS (Concepts only).

UNIT III INTERFACING, COMMUNICATION AND RTOS SERVICES 9 hours

Interfacing with Peripherals: UART, SPI, I2C; Semaphores, Mutexes, Message Queues, Pipes; Shared Memory and Synchronization Issues; ISRs and Event flags, Device Drivers Basics (Polling, Interrupts), Choosing and Porting RTOS to Microcontrollers.

UNIT IV FIRMWARE DEVELOPMENT AND ARM ARCHITECTURE 9 hours

Firmware Boot Process, Startup Code, Linker Scripts, Memory Map, Startup Routine, ARM CortexM Architecture Overview, System Control Block (SCB), NVIC, SysTick Timer, Memory Protection Unit (MPU), Exception Handling, Real-world Applications of ARM-based Embedded Systems.

UNIT V EMBEDDED SYSTEM DESIGN AND MODELING 9 hours

System Design Cycle: Requirement Analysis to Testing, Hardware/Software Partitioning, UML for Embedded Design: Use Case, Sequence, Activity Diagrams, Co-design Techniques, Co-simulation Tools, Single-Core vs Multi-Core Embedded Systems, Performance Metrics, Power Optimization in Embedded Systems.

Course Outcomes:

Upon successful completion of the course, students will be able to

- CO1:** Describe the structure and functionality of embedded systems.
- CO2:** Develop embedded programs using C and understand RTOS principles.
- CO3:** Design multitasking embedded applications using RTOS mechanisms.
- CO4:** Implement firmware with real-time constraints on ARM microcontrollers.
- CO5:** Apply UML and co-design techniques for embedded system modeling.

Textbooks:

1. Mazidi M.A., Mazidi J.G., “The 8051 Microcontroller and Embedded Systems”, Pearson Education, 2013.
2. Sloss, A.N., Symes, D., “ARM System Developer’s Guide”, Morgan Kaufmann, 2004.
3. Jonathan Valvano, “Embedded Systems: Real-Time Interfacing to ARM Cortex-M Microcontrollers”, CreateSpace, 2017.

Reference Books:

1. Steve Furber, “ARM System-on-Chip Architecture”, Pearson, 2000.
2. Jack Ganssle, “The Art of Designing Embedded Systems”, Newnes, 2008.
3. Heath S., “Embedded Systems Design”, Elsevier, 2009.
4. Joseph Yiu, “The Definitive Guide to ARM Cortex-M3/M4 Processors”, Newnes.
5. Peter Marwedel, “Embedded System Design”, Springer.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Open Elective - IV

23ECE304 COMMUNITY RADIO TECHNOLOGY

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Objectives:

The main objectives of the course are to

1. Associate the concept of fundamentals in Community Radio in Local Communication and development.
2. Gain knowledge of Studio technology and operations including Soundboards, Microphones, Recording, scheduling, content creation, and team coordination.
3. Develop skills in Audio Pre-production and post-production such as recording, editing, and mixing audio content.
4. Categorize the Radio Transmission Technology comprising signal requirements aligning with factors affecting Coverage and Shadow Areas.
5. Explore Radio Transmission technology essentials and understand the technical aspects of setting up and maintaining an FM transmitter.

UNIT I COMMUNITY RADIO CONCEPT AND CR STATION 9 hours

Introduction to Radio Broadcasting - Evolution of Community Radio (CR) - CR Policy Guidelines and Implications – CR Technology and Equipment; Components of a CR Station - Studios for Community Radio- Power Consumption and Conservation- Alternative Sources of Energy

UNIT II STUDIO TECHNOLOGY & OPERATIONS 9 hours

Basics of Sound - Components of Sound - Propagation of Sound Waves - Components of the Audio Chain - Audio Chain in a typical Broadcast Studio - Studio Acoustics; Techniques of Handling Various Tools - Types of Connectors & Audio Cables - Preventive and Corrective Maintenance - Content Distribution: Internet, Wireless Mesh Networking (WiMesh) & Mobile Telephony

UNIT III AUDIO PRE & POST PRODUCTION 9 hours

Audio Cables and Connectors– Recording Audio in the Field - Audio Cables and Connectors - Open Source Software for CR - Conventional Landline Systems- GSM/CDMA - Voice Over Internet Protocol (VoIP); Sound Recording and Editing - Mixing and Mastering - File Formats and Compression Transmission - Storing and Retrieval

UNIT IV RADIO TRANSMISSION TECHNOLOGY 9 hours

Transmission Chain Overview – Connectivity & Audio Processor/Limiter - Antenna (Types and Polarization) – Transmitter Maintenance and Fault Diagnosis - Antenna and Coaxial Cable - Antenna System - Propagation and Coverage – Field Strength Measurements and Drawing an Actual Coverage Map

UNIT V FM TRANSMITTER SETUP 9 hours

Mounting and Connecting the Transmitter- Interpretation of the Transmitter Meter Readings and Indications - Mounting and Connecting the Transmitter - Reporting on the Basis of Visual Observation - Checking Earth Conductivity - Transmitter Operation and Upkeep Issues

Course Outcomes:

Upon successful completion of the course, students will be able to

- CO1:** Interpret the evolution with a framework of Community Radio with Technical Principles and essential Radio Spectrums. (L2)
- CO2:** Apply Studio Technology and Operational practices with the components of the Audio Chain including Acoustics and Equipment maintenance. (L3)
- CO3:** Conduct Comprehensive Audio Pre & Post-production to operate field Recordings with Hardware and Open-source software to manage sound recording, editing, mixing, mastering and file compression. (L4)
- CO4:** Infer the principles of FM transmission, Antenna systems, Radio wave propagation and factors affecting coverage. (L5)
- CO5:** Demonstrate knowledge of the connecting audio feeds for Transmitter setup by resolving operational Issues with corrective maintenance. (L6)

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

PROFESSIONAL ELECTIVES

Professional Elective - II

23CSD401 SOCIAL NETWORK ANALYSIS

L T P C
3 0 0 3

Pre-requisite: Fundamentals of data analysis, Python programming

Course Objectives:

The main objectives of the course is to

1. Discuss the characteristics of different social networks
2. Demonstrate the functioning of different social networks

UNIT I

9 hours

Hacking on Twitter data, Micro formats: Semantic Markup and common sense collide.

UNIT II

9 hours

Mailboxes: Oldies but Goodies, Titter: Friends, Followers and Set wise operations.

UNIT III

9 hours

Twitter: The Tweet, the Whole Tweet, and Nothing but the Tweet.

UNIT IV

9 hours

LinkedIn: Clustering your professional network for Fun (and profit).

UNIT V

9 hours

Face book: The All-in-one Wonder

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explore the functionality of different social networks

CO2: Analyze social networks

Textbooks:

1. Matthew A. Russel, Mining the Social Web, O'Reilly, 2013

Reference Books:

1. Social Network Analysis: A Introduction with an Extensive Implementation to a Large Scale Online Network using Pajek, SeifedineKadry, Mohammed Taie, 2014.
2. An Introduction to Social Network Data Analytics, Charu C. Aggarwal, IBM T. J. Watson Research Center.

Online Learning Resources

1. Social Network Analysis | Coursera

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Professional Elective - II

23CSD402 COMPUTER NETWORKS INTERNET PROTOCOL

L	T	P	C
3	0	0	3

Pre-requisite: Computer Organization and Architecture

Course Objectives:

The main objectives of the course is to

1. Understand the basic concepts of Computer Networks.
2. Introduce the layered approach for design of computer networks
3. Expose the network protocols used in Internet environment
4. Explain the format of headers of IP, TCP and UDP
5. Familiarize with the applications of Internet
6. Elucidate the design issues for a computer network

UNIT I COMPUTER NETWORKS AND THE INTERN

9 hours

What Is the Internet? The Network Edge, The Network Core, Delay, Loss, and Throughput in Packet Switched Networks (Textbook 2), Reference Models, Example Networks, Guided Transmission Media, Wireless Transmission (Textbook 1)

UNIT II THE DATA LINK LAYER, ACCESS NETWORKS, AND LANS

9 hours

Data Link Layer Design Issues, Error Detection and Correction, Elementary Data Link Protocols, Sliding Window Protocols (Textbook 1) Introduction to the Link Layer, Error-Detection and -Correction Techniques, Multiple Access Links and Protocols, Switched Local Area Networks Link Virtualization: A Network as a Link Layer.

UNIT III THE NETWORK LAYER

9 hours

Routing Algorithms, Internetworking, The Network Layer in the Internet (Textbook 1)

UNIT IV THE TRANSPORT LAYER

9 hours

Connectionless Transport: UDP (Textbook 2), The Internet Transport Protocols: TCP, Congestion Control (Textbook 1)

UNIT V PRINCIPLES OF NETWORK APPLICATIONS

9 hours

Principles of Network Applications, The Web and HTTP, Electronic Mail in the Internet, DNS—The Internet's Directory Service, Peer-to-Peer Applications Video Streaming and Content Distribution Networks (Textbook 2)

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1:Identify the software and hardware components of a computer network.

CO2: Design software for a computer network.

CO3: Develop new routing, and congestion control algorithms.

CO4: Assess critically the existing routing protocols.

CO5: Explain the functionality of each layer of a computer network.

CO6: Choose the appropriate transport protocol based on the application requirements.

Textbooks:

1. Andrew S.Tanenbaum, David J.Wetherall, Computer Networks, 5th Edition, PEARSON.
2. James F. Kurose, Keith W. Ross, “Computer Networking: A Top-Down Approach”, 6th edition, Pearson, 2019.

Reference Books:

1. Forouzan, Data communications and Networking, 5th Edition, McGraw Hill Publication.
2. Youlu Zheng, ShakilAkthar, “Networks for Computer Scientists and Engineers”, Oxford Publishers, 2016.

Online Learning Resources

2. <http://www.nptelvideos.in/2012/11/computer-networks.html><https://nptel.ac.in/courses/106105183/3>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Professional Elective - II

23CSD403 RECOMMENDER SYSTEMS

L T P C
3 0 0 3

Pre-requisite:

Course Objectives:

The main objectives of the course is to

1. To provide students with basic concepts and its application in various domain
2. To make the students understand different techniques that a data scientist needs to know for analysing big data
3. To design and build a complete machine learning solution in many application domains.

**UNIT I AN INTRODUCTION TO RECOMMENDER SYSTEMS, 9 hours
NEIGHBORHOOD-BASED COLLABORATIVE FILTERING**

Introduction, Goals of Recommender Systems, Basic Models of Recommender Systems, Domain Specific Challenges in Recommender Systems. Advanced Topics and Applications. Introduction, Key Properties of Ratings Matrices, Predicting Ratings with Neighborhood- Neighborhood-Based Collaborative Filtering: Based Methods, Clustering and Neighborhood-Based Methods, Dimensionality Reduction and Neighborhood Methods, Graph Models for Neighborhood-Based Methods, A Regression Modelling View of Neighborhood Methods.

**UNIT II MODEL-BASED COLLABORATIVE FILTERING, CONTENT-BASED 9 hours
RECOMMENDER SYSTEMS**

Introduction, Decision and Regression Trees, Rule-Based Collaborative Filtering, Naive Bayes Collaborative Filtering, Using an Arbitrary Classification Model as a Black-Box, Latent Factor Models, Integrating Factorization and Neighborhood Models. Content-Based Recommender Systems: Introduction, Basic Components of Content-Based Systems, Preprocessing and Feature Extraction, Learning User Profiles and Filtering, Content-Based Versus Collaborative Recommendations, Using Content-Based Models for Collaborative Filtering, Summary.

**UNIT III KNOWLEDGE-BASED RECOMMENDER SYSTEMS, ENSEMBLE 9 hours
BASED AND HYBRID RECOMMENDER SYSTEMS**

Introduction, Constraint-Based Recommender Systems, Case-Based Recommenders, Persistent Personalization in Knowledge-Based Systems, Summary. Introduction, Ensemble Methods from the Classification Perspective, Weighted Hybrids, Switching Hybrids, Cascade Hybrids, Feature Augmentation Hybrids, Meta-Level Hybrids, Feature Combination Hybrids, Summary.

**UNIT IV EVALUATING RECOMMENDER SYSTEMS, CONTEXT-SENSITIVE 9 hours
RECOMMENDER SYSTEMS**

Introduction, Evaluation Paradigms, General Goals of Evaluation Design, Design Issues in Offline Recommender Evaluation, Accuracy Metrics in Offline Evaluation, Limitations of Evaluation Measures, Limitations of Evaluation Measures. Introduction, The Multidimensional Approach, Contextual Pre-filtering: A Reduction-Based Approach, Contextual Pre-filtering: A Reduction-Based Approach, Contextual Modelling.

UNIT V TIME- AND LOCATION-SENSITIVE RECOMMENDER SYSTEMS 9 hours

Introduction, Temporal Collaborative Filtering, Discrete Temporal Models, Location-Aware Recommender Systems, Location-Aware Recommender Systems Location-Aware Recommender Systems, Summary.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Aware of various issues related to Personalization and Recommendations.

CO2: Design and implement a set of well-known Recommender System approaches used in E commerce and Tourism industry.

CO3: Develop new Recommender Systems for a number of domains especially, Education, Health-care.

Textbooks:

1. Charu C. Aggarwal, "Recommender Systems", Springer, 2016.

Reference Books:

1. Francesco Ricci, Lior Rokach, "Recommender Systems Handbook", 2nd ed., Springer, 2015 Edition

Online Learning Resources

1. Recommendation System -Understanding The Basic Concepts (analyticsvidhya.com)
2. Recommender Systems | Coursera.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Professional Elective - II

23CSD404 NATURAL LANGUAGE PROCESSING

L	T	P	C
3	0	0	3

Pre-requisite: Python Programming, Machine Learning Basics

Course Objectives:

The main objectives of the course is to

1. Explain and apply fundamental algorithms and techniques in the area of natural language processing (NLP)
2. Discuss approaches to syntax and semantics in NLP.
3. Examine current methods for statistical approaches to machine translation.
4. Teach machine learning techniques used in NLP.

UNIT I INTRODUCTION TO NATURAL LANGUAGE

9 hours

The Study of Language, Applications of NLP, Evaluating Language Understanding Systems, Different Levels of Language Analysis, Representations and Understanding, Organization of Natural language Understanding Systems, Linguistic Background: An outline of English Syntax.

UNIT II GRAMMARS AND PARSING

9 hours

Grammars and Parsing- Top-Down and Bottom-Up Parsers, Transition Network Grammars, Feature Systems and Augmented Grammars, Morphological Analysis and the Lexicon, Parsing with Features, Augmented Transition Networks, Bayes Rule, Shannon game, Entropy and Cross Entropy.

UNIT III GRAMMARS FOR NATURAL LANGUAGE

9 hours

Grammars for Natural Language, Movement Phenomenon in Language, Handling questions in Context Free Grammars, Hold Mechanisms in ATNs, Gap Threading, Human Preferences in Parsing, Shift Reduce Parsers, Deterministic Parsers.

UNIT IV SEMANTIC INTERPRETATION

9 hours

Semantic & Logical form, Word senses & ambiguity, The basic logical form language, Encoding ambiguity in the logical Form, Verbs & States in logical form, Thematic roles, Speech acts & embedded sentences, Defining semantics structure model theory. Language Modelling Introduction, n-Gram Models, Language model Evaluation, Parameter Estimation, Language Model Adaption, Types of Language Models, Language-Specific Modelling Problems, Multilingual and Cross lingual Language Modelling.

UNIT V MACHINE TRANSLATION

9 hours

Survey: Introduction, Problems of Machine Translation, Is Machine Translation Possible, Brief History, Possible Approaches, Current Status. Anusaraka or Language Accessor: Background, Cutting the Gordian Knot, The Problem, Structure of Anusaraka System, User Interface, Linguistic Area, Giving up Agreement in Anusarsaka Output, Language Bridges.

Multilingual Information Retrieval: Introduction, Document Pre-processing, Monolingual Information Retrieval, CLIR, MLIR, Evaluation in Information Retrieval, Tools, Software and Resources.

Multilingual Automatic Summarization Introduction, Approaches to Summarization, Evaluation, How to Build a Summarizer, Competitions and Datasets.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand the various NLP Applications and Organization of Natural language, able to learn and implement realistic applications using Python.

CO2: Apply the various Parsing techniques, Bayes Rule, Shannon game, Entropy and Cross Entropy.

CO3: Understand the fundamentals of CFG and parsers and mechanisms in ATN's.

CO4: Apply Semantic Interpretation and Language Modelling.

CO5: Apply the concept of Machine Translation and multilingual Information Retrieval systems and Automatic Summarization.

Textbooks:

1. James Allen, Natural Language Understanding, 2nd Edition, 2003, Pearson Education.
2. Multilingual Natural Language Processing Applications: From Theory To Practice-Daniel M.Bikel and ImedZitouni, Pearson Publications.
3. Natural Language Processing, Apaninian perspective, AksharBharathi, Vineetchaitanya, Prentice-Hall of India.

Reference Books:

1. Charniack, Eugene, Statistical Language Learning, MIT Press, 1993.
2. Jurafsky, Dan and Martin, James, Speech and Language Processing, 2nd Edition, Prentice Hall, 2008.
3. Manning, Christopher and Henrich, Schutze, Foundations of Statistical Natural Language Processing, MIT Press, 1999.

Online Learning Resources

1. <https://nptel.ac.in/courses/106/105/106105158/>
2. <http://www.nptelvideos.in/2012/11/natural-language-processing.html>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Professional Elective - III

23CSD405 SOFTWARE PROJECT MANAGEMENT

L T P C
3 0 0 3

Pre-requisite: Software Engineering

Course Objectives:

The main objectives of the course is to,

This course is designed to enable the students to understand the fundamental principles of Software Project management & will also have a good knowledge of the responsibilities of a project manager and how to handle them.

UNIT I

9 hours

Conventional Software Management: The waterfall model, conventional software Management performance

Evolution of Software Economics: software Economics. Pragmatic Software Cost Estimation

Improving Software Economics: Reducing Software Product Size, Improving Software Processes, Improving Team Effectiveness, Improving Automation, Achieving Required Quality, Peer Inspections.

UNIT II

9 hours

The old way and the new: The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

Life cycle phases: Engineering and production stages, inception, Elaboration, construction, transition phases. **Artifacts of the process:** The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts.

UNIT III

9 hours

Work Flows of the process: Software process workflows, Inter Trans workflows. **Checkpoints of the Process:** Major Mile Stones, Minor Milestones, Periodic status assessments. **Iterative Process Planning:** work breakdown structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning.

UNIT IV

9 hours

Process Automation: Automation Building Blocks, The Project Environment.

Project Control and Process instrumentation: The seven core Metrics, Management indicators, quality indicators **Tailoring the Process:** Process discriminates. Managing people and organizing teams.

UNIT V

9 hours

Project Organizations and Responsibilities: Line-of-Business Organizations, Project Organizations, evolution of Organizations.

Future Software Project Management: Modern Project Profiles, Next generation Software economics, modern process transitions.

Case Study: The Command Center Processing and Display System-Replacement (CCPDS-R)

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Describe the fundamentals of Project Management.

CO2: Recognize and use Project Scheduling Techniques.

CO3: Familiarize with Project Control Mechanisms.

CO4: Understand Team Management.

CO5: Recognize the importance of Project Documentation and Evaluation.

Textbooks:

1. Software Project Management, Walker Royce, Pearson Education, 2012
2. Bob Hughes, Mike Cotterell and Rajib Mall “Software Project Management”, 6th Edition, McGraw Hill Edition, 2017

Reference Books:

1. Pankaj Jalote, “Software Project Management in practice”, 5th Edition, Pearson Education, 2017.
2. Murali K. Chemuturi, Thomas M. Cagley Jr.” Mastering Software Project Management: Best Practices, Tools and Techniques”, J. Ross Publishing, 2010
3. Sanjay Mohapatra, “Software Project Management”, Cengage Learning, 2011

Online Learning Resources

1. <http://nptel.ac.in/courses/106101061/29>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Professional Elective - III

23CSD406 COMPUTER VISION

L T P C
3 0 0 3

Pre-requisite: Machine Learning, Deep Learning

Course Objectives:

The main objectives of the course is to

The objective of this course is to understand the basic issues in computer vision and major approaches to address the methods to learn the Linear Filters, segmentation by clustering, Edge detection, Texture.

UNIT I LINEAR FILTERS

9 hours

Introduction to Computer Vision, Linear Filters and Convolution, Shift Invariant Linear Systems, Spatial Frequency and Fourier Transforms, Sampling and Aliasing Filters as Templates, Technique: Normalized Correlation and Finding Patterns, Technique: Scale and Image Pyramids.

UNIT II EDGE DETECTION

9 hours

Noise- Additive Stationary Gaussian Noise, Why Finite Differences Respond to Noise, Estimating Derivatives - Derivative of Gaussian Filters, Why Smoothing Helps, Choosing a Smoothing Filter, Why Smooth with a Gaussian? Detecting Edges-Using the Laplacian to Detect Edges, Gradient-Based Edge Detectors, Technique: Orientation Representations and Corners.

UNIT III TEXTURE

9 hours

Representing Texture –Extracting Image Structure with Filter Banks, Representing Texture using the Statistics of Filter Outputs, Analysis (and Synthesis) Using Oriented Pyramids –The Laplacian Pyramid, Filters in the Spatial Frequency Domain, Oriented Pyramids, Application: Synthesizing Textures for Rendering, Homogeneity, Synthesis by Sampling Local Models, Shape from Texture, Shape from Texture for Planes,

UNIT IV SEGMENTATION BY CLUSTERING

9 hours

What is Segmentation, Human Vision: Grouping and Gestalt, Applications: Shot Boundary Detection and Background Subtraction. Image Segmentation by Clustering Pixels, Segmentation by Graph-Theoretic Clustering. The Hough Transform, Fitting Lines, Fitting Curves.

UNIT V RECOGNIZATION BY RELATIONS BETWEEN TEMPLATES

9 hours

Finding Objects by Voting on Relations between Templates, Relational Reasoning Using Probabilistic Models and Search, Using Classifiers to Prune Search, Hidden Markov Models, Application: HMM and Sign Language Understanding, Finding People with HMM.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1:Identify basic concepts, terminology, theories, models and methods in the field of computer vision,

CO2: Describe known principles of human visual system,

CO3: Describe basic methods of computer vision related to multi-scale representation, edge detection and detection of other primitives, stereo, motion and object recognition,

CO4: Suggest a design of a computer vision system for a specific problem

Textbooks:

1. David A. Forsyth, Jean Ponce, Computer Vision – A modern Approach, PHI, 2003.

Reference Books:

1. Geometric Computing with Clifford Algebras: Theoretical Foundations and Applications in Computer Vision and Robotics, Springer; 1st edition, 2001 by Sommer.
2. Digital Image Processing and Computer Vision, 1/e, by Sonka.
3. Computer Vision and Applications: Concise Edition (With CD) by Jack Academy Press, 2000.

Online Learning Resources

1. <https://nptel.ac.in/courses/106105216>

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Professional Elective - III

23CSD407 CLOUD COMPUTING

L T P C
3 0 0 3

Pre-requisite: Nil

Course Objectives:

The main objective of the course is to

1. To explain the evolving computer model called cloud computing.
2. To introduce the various levels of services that can be achieved by cloud.
3. To describe the security aspects in cloud.

UNIT I BASICS OF CLOUD COMPUTING

9 hours

Introduction to cloud computing: Introduction, Characteristics of cloud computing, Cloud Models, Cloud Services Examples, Cloud Based services and applications

Cloud concepts and Technologies: Virtualization, Load balancing, Scalability and Elasticity, Deployment, Replication, Monitoring, Software defined, Network function virtualization, Map Reduce, Identity and Access Management, services level Agreements, Billing.

Cloud Services and Platforms: Compute Services, Storage Services, Database Services, Application services, Content delivery services, Analytics Services, Deployment and Management Services, Identity and Access Management services, Open Source Private Cloud software.

UNIT II HADOOP AND PYTHON

9 hours

Hadoop MapReduce: Apache Hadoop, Hadoop Map Reduce Job Execution, Hadoop Schedulers, Hadoop Cluster setup.

Cloud Application Design: Reference Architecture for Cloud Applications, Cloud Application Design Methodologies, Data Storage Approaches.

Python Basics: Introduction, Installing Python, Python data Types & Data Structures, Control flow, Function, Modules, Packages, File handling, Date/Time Operations, Classes.

UNIT III PYTHON FOR CLOUD COMPUTING

9 hours

Python for Cloud: Python for Amazon web services, Python for Google Cloud Platform, Python for windows Azure, Python for MapReduce, Python packages of Interest, Python web Application Framework, Designing a RESTful web API.

Cloud Application Development in Python: Design Approaches, Image Processing APP, Document Storage App, MapReduce App, Social Media Analytics App.

UNIT IV BIG DATA, MULTIMEDIA AND TUNING

9 hours

Big Data Analytics: Introduction, Clustering Big Data, Classification of Big data Recommendation of Systems.

Multimedia Cloud: Introduction, Case Study: Live video Streaming App, Streaming Protocols, case Study: Video Transcoding App.

Cloud Application Benchmarking and Tuning: Introduction, Workload Characteristics, Application Performance Metrics, Design Considerations for a Benchmarking Methodology, Benchmarking Tools, Deployment Prototyping, Load Testing & Bottleneck Detection case Study, Hadoop benchmarking case Study.

UNIT V APPLICATIONS AND ISSUES IN CLOUD

9 hours

Cloud Security: Introduction, CSA Cloud Security Architecture, Authentication, Authorization, Identity Access Management, Data Security, Key Management, Auditing.

Cloud for Industry, Healthcare & Education: Cloud Computing for Healthcare, Cloud computing for Energy Systems, Cloud Computing for Transportation Systems, Cloud Computing for Manufacturing Industry, Cloud computing for Education. **Migrating into a Cloud:** Introduction, Broad Approaches to migrating into the cloud, the seven step model of migration into a cloud.

Organizational readiness and Change Management in The Cloud Age: Introduction, Basic concepts of Organizational Readiness, Drivers for changes: A frame work to comprehend the competitive environment, common change management models, change management maturity models, Organizational readiness self – assessment.

Legal Issues in Cloud Computing: Introduction, Data Privacy and security Issues, cloud contracting models, Jurisdictional issues raised by virtualization and data location, commercial and business considerations, Special Topics.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1:Ability to create cloud computing environment.

CO2: Ability to design applications for Cloud environment.

CO3: Design & develop backup strategies for cloud data based on features.

CO4: Use and Examine different cloud computing services.

CO5: Apply different cloud programming model as per need.

Textbooks:

1. Cloud computing A hands-on Approach|| By ArshdeepBahga, Vijay Madiseti, Universities Press, 2016
2. Cloud Computing Principles and Paradigms: By Raj Kumar Buyya, James Broberg, Andrzej Goscinski, Wiley, 2016

Reference Books:

1. Mastering Cloud Computing by RajkumarBuyya, Christian Vecchiola, SThamaraiSelvi, TMH
2. Cloud computing A Hands-On Approach by ArshdeepBahga and Vijay Madiseti.

Professional Elective - IV

23CSD408 SOFTWARE ARCHITECTURE AND DESIGN PATTERN

L T P C

3 0 0 3

Pre-requisite: Object Oriented Programming, Software Engineering, Data Structures, Design and Analysis of Algorithms, and Database Management Systems.

Course Description:

This course introduces the principles of software architecture and design patterns for developing scalable, maintainable, and high-quality software systems. It covers architectural styles, quality attributes, architecture evaluation methods, software product lines, and component-based systems, along with creational, structural, and behavioral design patterns to solve recurring software design problems. The course also explores real-world case studies and emerging trends in software architecture.

Course Objectives:

The main objective of the course is to

1. To introduce the fundamental concepts of software architecture, including its role in the software development lifecycle and the factors that influence architectural design.
2. To understand and apply architectural styles, patterns, reference models, and structures in designing robust software systems.
3. To explore methods for evaluating software architectures using systematic approaches such as ATAM and CBAM, aiding effective design decision-making.
4. To provide insights into the evolution of software architecture in the context of product lines, component-based development, and emerging architectural trends.
5. To develop the ability to identify, organize, and apply design patterns (creational, structural, behavioral) to solve recurring software design problems.

UNIT I DATA WAREHOUSING AND ONLINE ANALYTICAL PROCESSING 9 hours

Envisioning Architecture: The Architecture Business Cycle, What is Software Architecture, Architectural patterns, reference models, reference architectures, architectural structures and views. Creating Architecture: Quality Attributes, Achieving qualities, Architectural styles and patterns, designing the Architecture, Documenting software architectures, Reconstructing Software Architecture.

UNIT II DATA PREPROCESSING 9 hours

Analysing Architectures: Architecture Evaluation, Architecture design decision making, ATAM, CBAM.

UNIT III CLASSIFICATION 9 hours

Moving from one system to many: Software Product Lines, Building systems from off the shelf components, Software architecture in future.

UNIT IV ASSOCIATION ANALYSIS 9 hours

Patterns: Pattern Description, Organizing catalogs, role in solving design problems, Selection and usage. Creational and Structural patterns: Abstract factory, builder, factory method, prototype, singleton, adapter, bridge, composite, façade, flyweight, Proxy.

UNIT V CLUSTER ANALYSIS

9 hours

Behavioural Patterns: Chain of responsibility, command, Interpreter, iterator, mediator, memento, observer, state, strategy, template method, visitor. Case Studies : A-7E – A case study in utilizing architectural structures, The World Wide Web - a case study in interoperability, Air Traffic Control – a case study in designing for high availability, Celsius Tech – a case study in product line development

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand the fundamental concepts of software architecture, including architectural structures, patterns, quality attributes, and documentation methods.

CO2: Evaluate software architectures using structured methods like ATAM and CBAM to support design decision-making and quality attribute trade-offs.

CO3: Apply software architecture principles to build scalable systems using product lines, off-the-shelf components and anticipate future architectural trends.

CO4: Identify, select, and apply appropriate creational and structural design patterns to solve common software design problems effectively.

CO5: Demonstrate understanding of behavioral design patterns and analyze real-world case studies to apply architectural concepts in practical scenarios.

Textbooks:

1. Software Architecture in Practice, second edition, Len Bass, Paul Clements & Rick Kazman, Pearson Education, 2003.
2. Design Patterns, Erich Gamma, Pearson Education, 1995.

Reference Books:

1. Beyond Software architecture, Luke Hohmann, Addison Wesley, 2003.
2. Software architecture, David M. Dikel, David Kane and James R. Wilson, Prentice Hall, PTR, 2001
3. Pattern Oriented Software Architecture, F. Buschmann & others, John Wiley & Sons.
4. Head First Design patterns, Eric Freeman & Elisabeth Freeman, O'REILLY, 2007.
5. Design Patterns in Java, Steven John Metsker & William C. Wake, Pearson education, 2006
6. J2EE Patterns, Deepak Alur, John Crupi & Dan Malks, Pearson education, 2003.
7. Design Patterns in C#, Steven John metsker, Pearson education, 2004.

Professional Elective - IV

23CSD409 BLOCK CHAIN TECHNOLOGY

L T P C
3 0 0 3

Pre-requisite: Computer networks basics, Programming fundamentals.

Course Description:

This course introduces the fundamental concepts, architecture, and applications of blockchain technology, including distributed ledgers, consensus mechanisms, smart contracts, Ethereum, Hyperledger Fabric, and emerging blockchain applications. It equips students with the knowledge to design, analyze, and implement blockchain-based solutions for secure, decentralized, and transparent systems in real-world applications.

Course Objectives:

The main objective of the course is to

1. Understand the fundamentals, evolution, architecture, and characteristics of blockchain technology
2. Learn core blockchain concepts such as hashing, consensus mechanisms, mining, cryptographic tokens, wallets, and smart contracts.
3. Analyze and design blockchain solutions using appropriate architecture frameworks and enterprise use cases.
4. Develop and implement blockchain applications using Ethereum and Hyperledger Fabric platforms.
5. Explore advanced blockchain concepts and evaluate the role of blockchain in emerging domains such as IoT, AI/ML, and secure digital identity.

UNIT I INTRODUCTION

9 hours

Introduction, Scenarios, Challenges Articulated, Blockchain, Blockchain Characteristics, Opportunities Using Blockchain, History of Blockchain. Evolution of Blockchain: Evolution of Computer Applications, Centralized Applications, Decentralized Applications, Stages in Blockchain Evolution, Consortia, Forks, Public Blockchain Environments, Type of Players in Blockchain Ecosystem, Players in Market.

UNIT II BLOCKCHAIN CONCEPTS

9 hours

Introduction, Changing of Blocks, Hashing, Merkle-Tree, Consensus, Mining and Finalizing Blocks, Currency aka tokens, security on blockchain, data storage on blockchain, wallets, coding on blockchain: smart contracts, peer-to-peer network, types of blockchain nodes, risk associated with blockchain solutions, life cycle of blockchain transaction.

UNIT III ARCHITECTING BLOCKCHAIN SOLUTIONS

9 hours

Architecting Blockchain solutions: Introduction, Obstacles for Use of Blockchain, Blockchain Relevance Evaluation Framework, Blockchain Solutions Reference Architecture, Types of Blockchain Applications. Cryptographic Tokens, Typical Solution Architecture for Enterprise Use Cases, Types of Blockchain Solutions, Architecture Considerations, Architecture with Blockchain Platforms, Approach for Designing Blockchain Applications.

UNIT IV ETHEREUM BLOCK CHAIN IMPLEMENTATION

9 hours

Introduction, Tuna Fish Tracking Use Case, Ethereum Ecosystem, Ethereum Development, Ethereum Tool Stack, Ethereum Virtual Machine, Smart Contract Programming, Integrated Development Environment, Truffle Framework, Ganache, Unit Testing, Ethereum Accounts, My Ether Wallet, Ethereum Networks/Environments, Infura, Ether scan, Ethereum Clients, Decentralized Application, Metamask, Tuna Fish Use Case Implementation, Open Zeppelin in Contracts.

UNIT V HYPER LEDGER BLOCK CHAIN IMPLEMENTATION

9 hours

Hyperledger Blockchain Implementation: Introduction, Use Case – Car Ownership Tracking, Hyperledger Fabric, Hyperledger Fabric Transaction Flow, FabCar Use Case Implementation, Invoking Chain code Functions Using Client Application.

Advanced Concepts in Blockchain: Introduction, Inter Planetary File System (IPFS), Zero Knowledge Proofs, Oracles, Self-Sovereign Identity, Blockchain with IoT and AI/ML Quantum Computing and Blockchain, Initial Coin Offering, Blockchain Cloud Offerings, Blockchain and its Future Potential.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain blockchain fundamentals, decentralized architectures, and the evolution of blockchain ecosystems.

CO2: Apply blockchain concepts such as hashing, consensus, smart contracts, and transaction mechanisms in practical scenarios.

CO3: Design and evaluate blockchain-based solutions for enterprise and real-world applications.

CO4: Implement decentralized applications using Ethereum, Hyperledger Fabric, and related development tools.

CO5: Analyze advanced blockchain technologies and assess their applications in future digital systems.

Textbooks:

1. Ambadas, Arshad SarfarzAriff, Sham “Blockchain for Enterprise Application Developers”, Wiley, 2020
2. Andreas M. Antonopoulos, “Mastering Bitcoin: Programming the Open Blockchain”, O’Reilly, 2017

Reference Books:

1. Blockchain: A Practical Guide to Developing Business, Law, and Technology Solutions, Joseph Bambara, Paul R. Allen, Mc Graw Hill.
2. Blockchain: Blueprint for a New Economy, Melanie Swan, O’Reilly

Professional Elective - IV

23CSD410 NoSQL DATABASES

L T P C
3 0 0 3

Pre-requisite: Data Base Management Systems

Course Description:

This course introduces the fundamental concepts of NoSQL databases, including key-value stores, document databases, column-oriented databases, and graph databases. It covers NoSQL data models, storage architectures, CRUD operations, indexing mechanisms, and querying techniques in modern distributed databases such as MongoDB, HBase, Redis, and Cassandra. The course equips students with skills to design, manage, and analyze scalable data solutions for big data and real-world applications.

Course Objectives:

The main objective of the course is to

1. Introduce the concepts, architecture, and applications of NoSQL databases and distributed data storage systems.
2. Understand NoSQL data models, CRUD operations, and techniques for interacting with different NoSQL databases.
3. Analyze storage architectures and query mechanisms in document, key-value, and column-oriented databases.
4. Apply indexing, ordering, and schema evolution techniques for efficient data retrieval and management.
5. Develop the ability to use NoSQL technologies for scalable, high-performance data management in real-world applications.

UNIT I INTRODUCTION TO NoSQL

9 hours

Definition And Introduction, Sorted Ordered Column-Oriented Stores, Key/Value Stores, Document Databases, Graph Databases, Examining Two Simple Examples, Location Preferences Store, Car Make And Model Database, Working With Language Bindings.

UNIT II INTERACTING WITH NoSQL

9 hours

If NoSql Then What, Language Bindings For NoSQL Data Stores, Performing Crud Operations, Creating Records, Accessing Data, Updating And Deleting Data

UNIT III NoSQL STORAGE ARCHITECTURE

9 hours

Working With Column-Oriented Databases, Hbase Distributed Storage Architecture, Document Store Internals, Understanding Key/Value Stores In Memcached And Redis, Eventually Consistent Non-Relational Databases.

UNIT IV NoSQL STORES

9 hours

Similarities Between SqlAndMongodb Query Features, Accessing Data From Column- Oriented Databases Like Hbase, Querying Redis Data Stores, Changing Document Databases, Schema Evolution In Column-Oriented Databases, Hbase Data Import And Export, Data Evolution In Key/Value Stores.

UNIT V INDEXING AND ORDERING DATA SETS

9 hours

Indexing and Ordering Data Sets: Essential Concepts Behind A Database Index, Indexing And Ordering In MongoDB, Creating and Using Indexes In MongoDB, Indexing And Ordering In Couchdb, Indexing In Apache Cassandra.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain the fundamentals, characteristics, and classifications of NoSQL databases.

CO2: Perform CRUD operations and interact with NoSQL databases using appropriate tools and language bindings.

CO3: Analyze and implement storage and querying mechanisms in MongoDB, HBase, Redis, and Cassandra.

CO4: Apply indexing and ordering techniques to optimize performance in NoSQL databases.

CO5: Design and evaluate scalable NoSQL-based solutions for modern data-intensive applications.

Textbooks:

1. Shashank Tiwari, Professional NoSQL, Wrox Press, Wiley, 2011, ISBN: 978-0-470-94224-6
2. PramodSadalgale and Martin Fowler, NoSQL Distilled, Addison-Wesley Professional, 2012.

Reference Books:

1. Dan McCreary and Ann Kelly, Making Sense of NoSQL, Manning Publications, 2013.
2. Gaurav Vaish, Getting Started with NoSQL, Packt Publishing, 2013.

Professional Elective - IV

23CSD411 DATA WAREHOUSING AND DATA MINING

L T P C
3 0 0 3

Pre-requisite: Data Structures, Algorithms, Probability & Statistics, Data Base Management Systems

Course Description:

This course introduces the fundamental concepts of data warehousing and data mining, including data preprocessing, OLAP operations, classification, association rule mining, clustering, and pattern discovery. It equips students with techniques to analyze large datasets, extract meaningful knowledge, and apply data-driven decision-making methods in real-world applications.

Course Objectives:

The main objective of the course is to

1. Introduce the concepts, architecture, and applications of data warehousing and data mining.
2. Understand data preprocessing techniques and methods for transforming raw data into suitable formats for mining
3. Apply classification, association analysis, and clustering techniques to discover useful patterns from data.
4. Analyze and evaluate supervised and unsupervised learning models for solving real-world problems.
5. Develop the ability to use data mining techniques for knowledge discovery and decision support applications.

UNIT I DATA WAREHOUSING AND ONLINE ANALYTICAL PROCESSING: 9 hours

Basic concepts, Data Warehouse Modeling: Data Cube and OLAP, Data Warehouse Design and Usage, Data Warehouse Implementation, Cloud Data Warehouse, Data Mining and Pattern Mining, Technologies, Applications, Major issues, Data Objects & Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity.

UNIT II DATA PREPROCESSING 9 hours

An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization.

UNIT III CLASSIFICATION 9 hours

Basic Concepts, General Approach to solving a classification problem, Decision Tree Induction: Attribute Selection Measures, Tree Pruning, Scalability and Decision Tree Induction, Visual Mining for Decision Tree Induction, Bayesian Classification Methods: Bayes Theorem, Naïve Bayes Classification, Rule-Based Classification, Model Evaluation and Selection.

UNIT IV ASSOCIATION ANALYSIS 9 hours

Problem Definition, Frequent Itemset Generation, Rule Generation: Confident Based Pruning, Rule Generation in Apriori Algorithm, Compact Representation of frequent item sets, FP-Growth Algorithm.

UNIT V CLUSTER ANALYSIS

9 hours

Overview, Basics and Importance of Cluster Analysis, Clustering techniques, Different Types of Clusters; K-means: The Basic K-means Algorithm, K means Additional Issues, Bi-secting K Means, Agglomerative Hierarchical Clustering: Basic Agglomerative Hierarchical Clustering Algorithm DBSCAN: Traditional Density Center-Based Approach, DBSCAN Algorithm, Strengths and Weaknesses.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain the fundamentals of data warehousing, OLAP operations, and multidimensional data models.

CO2: Apply data preprocessing techniques such as cleaning, integration, reduction, and transformation.

CO3: Implement and evaluate classification methods for predictive analysis.

CO4: Analyze frequent patterns using association rule mining techniques such as Apriori and FP-Growth.

CO5: Apply clustering algorithms such as K-Means, Hierarchical Clustering, and DBSCAN for pattern discovery.

Textbooks:

1. Data Mining concepts and Techniques, 3rd edition, Jiawei Han, Michel Kamber, Elsevier, 2011.
2. Introduction to Data Mining: Pang-Ning Tan & Michael Steinbach, Vipin Kumar, Pearson, 2012.

Reference Books:

1. Data Mining: Vikram Pudi and P. Radha Krishna, Oxford Publisher.
2. Data Mining Techniques, Arun K Pujari, 3rd edition, Universities Press, 2013

Professional Elective - V

23CSD412 AGILE METHODOLOGIES

L T P C
3 0 0 3

Pre-requisite: Data Structures, Algorithms, Programming for Problem Solving, Software Engineering

Course Description:

This course introduces the principles, practices, and frameworks of Agile software development, focusing on iterative development, collaboration, adaptive planning, and continuous improvement. It covers Agile methodologies such as Scrum, Extreme Programming (XP), Lean, Agile testing, product management, and scaling Agile for large projects. The course equips students with the knowledge and skills to manage software projects effectively in dynamic environments.

Course Objectives:

The main objective of the course is to

1. Introduce the fundamentals, values, principles, and lifecycle of Agile software development
2. Understand Scrum practices, Agile planning, estimation, and project management techniques
3. Apply Agile product management, risk management, and quality assurance practices
4. Analyze Agile requirements engineering, Agile testing techniques, and test-driven development
5. Develop the ability to implement scaling Agile practices and manage large Agile projects effectively.

UNIT I AGILE SOFTWARE DEVELOPMENT

9 hours

Basics and Fundamentals of Agile Process Methods, Values of Agile, Principles of Agile, stakeholders, Challenges. Lean Approach: Waste Management, Kaizen and Kanban, add process and products add value. Roles related to the lifecycle, differences between Agile and traditional plans, differences between Agile plans at different lifecycle phases. Testing plan links between testing, roles and key techniques, principles, understand as a means of assessing the initial status of a project/ How Agile helps to build quality

UNIT II AGILE AND SCRUM PRINCIPLES

9 hours

Agile Manifesto, Twelve Practices of XP, Scrum Practices, Applying Scrum. Need of scrum, working of scrum, advanced Scrum Applications, Scrum and the Organization, scrum values

UNIT III AGILE PRODUCT MANAGEMENT

9 hours

Communication, Planning, Estimation Managing the Agile approach Monitoring progress, Targeting and motivating the team, Managing business involvement, Escalating issue. Quality, Risk, Metrics and Measurements, Managing the Agile approach Monitoring progress, Targeting and motivating the team, Managing business involvement and Escalating issue

UNIT IV AGILE REQUIREMENTS AND AGILE TESTING

9 hours

User Stories, Backlog Management. Agile Architecture: Feature Driven Development. Agile Risk Management: Risk and Quality Assurance, Agile Tools. Agile Testing Techniques, Test-Driven Development, User Acceptance Test

UNIT V AGILE REVIEW AND SCALING AGILE FOR LARGE PROJECTS 9 hours

Agile Metrics and Measurements, The Agile approach to estimating and project variables, Agile Measurement, Agile Control: the 7 control parameters. Agile approach to Risk, The Agile approach to Configuration Management, The Atern Principles, Atern Philosophy, The rationale for using Atern, Refactoring, Continuous integration, Automated Build Tools. Scrum of Scrums, Team collaborations, Scrum, Estimate a Scrum Project, Track Scrum Projects, Communication in Scrum Projects, Best Practices to Manage Scrum.

Course Outcomes:

At the end of the course, students will be able to:

CO1: Explain Agile principles, values, frameworks, and differences between Agile and traditional development models.

CO2: Apply Scrum practices, Agile planning, estimation, and monitoring techniques in project environments.

CO3: Analyze and manage Agile product development using metrics, risk assessment, and quality practices.

CO4: Implement Agile requirements management, user stories, backlog handling, and Agile testing methods.

CO5: Evaluate and apply Agile scaling techniques, Scrum of Scrums, and best practices for large projects.

Textbooks:

1. Robert C. Martin, Agile Software Development, Principles, Patterns, and Practices AlanAptSeries(2011)

Professional Elective - V

23CSD413 EXPERT SYSTEMS

L T P C
3 0 0 3

Pre-requisite: Discrete Mathematics, Data Structures and Algorithms, Probability and Statistics

Course Description:

This course introduces the fundamental concepts of Expert Systems and Artificial Intelligence, focusing on knowledge representation, reasoning, uncertainty handling, inference mechanisms, and expert system architectures. It covers rule-based systems, probabilistic reasoning, structured knowledge representation, and knowledge management techniques used in intelligent decision-making systems.

Course Objectives:

The main objective of the course is to

1. Introduce the fundamentals of Artificial Intelligence, knowledge-based systems, and knowledge acquisition techniques
2. Understand logical and rule-based knowledge representation methods and inference mechanisms.
3. Apply uncertainty handling and probabilistic reasoning techniques in expert systems
4. Analyze structured and object-oriented knowledge representation models for intelligent systems
5. Develop the ability to design and evaluate expert system architectures for problem-solving applications.

UNIT I OVERVIEW OF ARTIFICIAL INTELLIGENCE

9 hours

Overview of Artificial Intelligence: Definition & Importance of AI.

Knowledge: General Concepts: Introduction, Definition and Importance of Knowledge, Knowledge-Based Systems, And Representation of Knowledge, Knowledge Organization, Knowledge Manipulation, And Acquisition of Knowledge.

UNIT II KNOWLEDGE REPRESENTATION

9 hours

Knowledge Representation: Introduction, Syntax and Semantics for Propositional logic, Syntax and Semantics for FOPL, Properties of WFFs, Conversion to Clausal Form, Inference Rules, The Resolution Principle, No deductive Inference Methods, Representations Using Rules.

UNIT III DEALING WITH INCONSISTENCIES AND UNCERTAINTIES, 9 hours
PROBABILISTIC REASONING

Dealing with Inconsistencies and Uncertainties: Introduction, Truth Maintenance Systems, Default Reasoning and the Closed World Assumption, Predicate Completion and Circumscription, Modal and Temporal Logics.

Probabilistic Reasoning: Introduction, Bayesian Probabilistic Inference, Possible World Representations, Dumpster-Shafer Theory, Ad-Hoc Methods.

UNIT IV STRUCTURED KNOWLEDGE AND OBJECT-ORIENTED REPRESENTATIONS 9 hours

Structured Knowledge: Graphs, Frames and Related Structures: Introduction, Associative Networks, Frame Structures, Conceptual Dependencies and Scripts. **Object-Oriented Representations:** Introduction, Overview of Objects, Classes, Messages and Methods, Simulation Example using an OOS Program.

UNIT V KNOWLEDGE ORGANIZATION AND MANAGEMENT

9 hours

Knowledge Organization and Management: Introduction, Indexing and Retrieval Techniques, Integrating Knowledge in Memory, Memory Organization Systems.

Expert Systems Architectures: Introduction, Rule Based System Architecture, Non-Production System Architecture, Dealing with uncertainty, Knowledge Acquisition and Validation, Knowledge System Building Tools.

Course Outcomes:

At the end of the course, students will be able to:

CO1: Explain the concepts of Artificial Intelligence, knowledge-based systems, and knowledge representation methods.

CO2: Apply propositional and predicate logic, inference rules, and resolution techniques for problem solving.

CO3: Analyze uncertainty handling approaches such as Bayesian reasoning and truth maintenance systems.

CO4: Implement structured knowledge representation models such as semantic networks, frames, and object-oriented approaches.

CO5: Evaluate and design expert system architectures, knowledge acquisition methods, and validation techniques.

Textbooks:

z

23CSD113 REINFORCEMENT LEARNING

L	T	P	C
3	0	0	3

Pre-requisite: Discrete Mathematics, Data Structures and Algorithms, Probability and Statistics

Course Description:

This course introduces the fundamental concepts and algorithms of Reinforcement Learning (RL), focusing on learning through interaction, sequential decision-making, and optimization in uncertain environments. It covers Markov Decision Processes, dynamic programming, Monte Carlo methods, temporal difference learning, function approximation, and policy gradient methods. The course equips students with the ability to develop intelligent agents capable of learning optimal actions through experience.

Course Objectives:

The main objective of the course is to

1. Introduce the foundations of Reinforcement Learning, probability concepts, and sequential decision-making models.
2. Understand Markov Decision Processes, Bellman equations, and dynamic programming methods.
3. Apply Monte Carlo methods and Temporal Difference learning techniques for prediction and control.
4. Analyze function approximation methods and deep reinforcement learning approaches.
5. Develop the ability to design and evaluate policy gradient and actor-critic methods for real-world RL problems.

UNIT I INTRODUCTION

9 hours

Introduction: Course logistics and overview. Origin and history of Reinforcement Learning research. Its connections with other related fields and with different branches of machine learning.

Probability Primer: Brush up of Probability concepts - Axioms of probability, concepts of random variables, PMF, PDFs, CDFs, Expectation. Concepts of joint and multiple random variables, joint, conditional and marginal distributions. Correlation and independence.

UNIT II MARKOV DECISION PROCESS

9 hours

Markov Decision Process: Introduction to RL terminology, Markov property, Markov chains, Markov reward process (MRP). Introduction to and proof of Bellman equations for MRPs along with proof of existence of solution to Bellman equations in MRP. Introduction to Markov decision process (MDP), state and action value functions, Bellman expectation equations, optimality of value functions and policies, Bellman optimality equations.

Prediction and Control by Dynamic Programming: Overview of dynamic programming for MDP, definition and formulation of planning in MDPs, principle of optimality, iterative policy evaluation, policy iteration, value iteration, Banach fixed point theorem, proof of contraction mapping property of Bellman expectation and optimality operators, proof of convergence of policy evaluation and value iteration algorithms, DP extensions.

UNIT III MONTE CARLO METHODS AND TD METHODS

9 hours

Monte Carlo Methods for Model Free Prediction and Control: Overview of Monte Carlo methods for model free RL, First visit and every visit Monte Carlo, Monte Carlo control, On policy and off policy learning, Importance sampling.

TD Methods: Incremental Monte Carlo Methods for Model Free Prediction, Overview TD(0), TD(1) and TD(λ), k step estimators, unified view of DP, MC and TD evaluation methods, TD Control methods - SARSA, Q-Learning and their variants.

UNIT IV FUNCTION APPROXIMATION METHODS

9 hours

Getting started with the function approximation methods, Revisiting risk minimization, gradient descent from Machine Learning, Gradient MC and Semi-gradient TD(0) algorithms, Eligibility trace for function approximation, After states, Control with function approximation, Least squares, Experience replay in deep Q-Networks.

UNIT V POLICY GRADIENTS

9 hours

Getting started with policy gradient methods, Log-derivative trick, Naive REINFORCE algorithm, bias and variance in Reinforcement Learning, Reducing variance in policy gradient estimates, baselines, advantage function, actor-critic methods.

Course Outcomes:

At the end of the course, students will be able to:

- CO1:** Explain the fundamental concepts of Reinforcement Learning, probability models, and Markov Decision Processes.
- CO2:** Apply dynamic programming techniques such as policy iteration and value iteration for solving MDPs.
- CO3:** Implement Monte Carlo, Temporal Difference, SARSA, and Q-learning methods for model-free learning.
- CO4:** Analyze and apply function approximation techniques, including deep Q-networks, for large-scale RL problems.
- CO5:** Evaluate and develop policy gradient and actor-critic methods for optimizing reinforcement learning agents.

Professional Elective - V

23CSD114 HIGH PERFORMANCE COMPUTING

L T P C
3 0 0 3

Pre-requisite: Discrete Mathematics, Data Structures and Algorithms, Computer Organization and Architecture, Operating Systems

Course Description:

This course introduces the principles and techniques of High-Performance Computing (HPC), focusing on parallel and distributed computing models, grid and cluster computing, performance optimization, load balancing, and advanced computing paradigms. It also covers pervasive computing concepts and introductory quantum computing models. The course equips students with knowledge to design, analyze, and apply high-performance systems for solving computationally intensive problems.

Course Objectives:

The main objectives of the course are to:

1. Introduce the fundamentals of high performance computing, grid computing architectures, and distributed computing paradigms
2. Understand cluster computing concepts, performance models, process scheduling, and parallel I/O mechanisms
3. Apply concepts of cluster operating systems, distributed shared memory, and load balancing techniques
4. Analyze pervasive computing concepts, device connectivity, and application development for pervasive systems
5. Develop the ability to understand quantum computing fundamentals and analyze quantum gates and algorithms

UNIT I FUNDAMENTALS OF GRID COMPUTING AND DISTRIBUTED SYSTEMS 9 hours

Grid Computing: Data & Computational Grids, Grid Architectures And Its Relations To Various Distributed Technologies. Autonomic Computing, Examples Of The Grid Computing Efforts (Ibm).

UNIT II CLUSTER COMPUTING AND PERFORMANCE OPTIMIZATION 9 hours

Cluster Setup & Its Advantages, Performance Models & Simulations; Networking Protocols & I/O, Messaging Systems. Process Scheduling, Load Sharing And Balancing; Distributed Shared Memory, Parallel I/O.

UNIT III CLUSTER SYSTEMS AND PERVASIVE COMPUTING FOUNDATIONS 9 hours

Example Cluster System – Beowulf; Cluster Operating System: Compass And Nanos Pervasive Computing Concepts & Scenarios; Hardware & Software; Human – Machine Interface.

UNIT IV DEVICE CONNECTIVITY AND PERVASIVE APPLICATIONS 9 hours

Device Connectivity; Java for Pervasive Devices; Application Examples.

UNIT V FUNDAMENTALS OF QUANTUM COMPUTING 9 hours

Classical Vs Quantum Logic Gates; One, Two & Three Qubit Quantum Gates; Fredkin & Toffoli Gates; Quantum Circuits; Quantum Algorithms.

Course Outcomes:

At the end of the course, students will be able to:

CO1: Explain the concepts of high performance computing, grid architectures, and distributed computing technologies.

CO2: Apply cluster computing models, scheduling techniques, and performance optimization strategies.

CO3: Analyze distributed memory systems, parallel I/O, and cluster operating system mechanisms.

CO4: Implement and evaluate pervasive computing applications and device connectivity solutions.

CO5: Analyze quantum computing concepts, quantum gates, and basic quantum algorithms.

Textbooks:

1. “Selected Topics In Advanced Computing” Edited By Dr. P. Padmanabham And Dr. M.B. Srinivas, 2005 Pearson Education.

Reference Books:

1. J. Joseph & C. Fellenstien: ‘Grid Computing’, Pearson Education
2. J. Burkhardt et.al: ‘pervasive computing’ Pearson Education
3. Marivesar: ‘Approaching quantum computing’, Pearson Education.
4. Raj kumarBuyya: ‘High performance cluster computing’, Pearson Education.
5. Neilsen& Chung L: ‘Quantum computing and Quantum Information’, Cambridge University Press.
6. A networking approach to Grid Computing, Minoli, Wiley

Online Learning Resources

1. NPTEL – Parallel and Distributed Computing
NPTEL – High Performance Computing
NPTEL – Cloud Computing and Distributed Systems
IBM Grid Computing Resources
Coursera – Introduction to Quantum Computing

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

MANAGEMENT COURSE

Management Courses

23HUM801 BUSINESS ETHICS AND CORPORATE GOVERNANCE

L T P C
2 0 0 2

Pre-requisite Nil

Course Description:

The course introduces students to the fundamental principles of business ethics and corporate governance. It equips engineering students with the knowledge and analytical skills required to navigate ethical dilemmas in professional life, understand ethical practices in various management functions, appreciate the role of corporate culture, and comprehend the legal and regulatory framework of corporate governance. Special emphasis is given to contemporary issues such as ethics in emerging technologies (AI, data privacy), fair trade practices, corporate social responsibility (CSR), and ESG (Environmental, Social, Governance) reporting, particularly relevant to Indian tech companies and start-ups.

Course Objectives:

This course enables students to:

1. Describe the concepts of Management theories, approaches and their application with organizations around us
2. Know the concepts of planning and management
3. Explain the basic concepts of organization, types and structure of organization
4. Make the students know leading, good communication, theories of motivation

UNIT I ETHICS 6 hours

Introduction – Meaning – Nature, Scope, significance, Loyalty, and ethical behavior.. Value systems - Business Ethics - Types, Characteristics, Factors, Contradictions and Ethical Practices in Management - Issues of Management

UNIT II ETHICS IN MANAGEMENT 6 hours

Introduction- Ethics in production, finance, Human resource management and Marketing Management - The Ethical Value System – Universalism, Utilitarianism, Distributive Justice, Social Contracts, Individual Freedom of Choice, Professional Codes; Culture and Ethics – Ethical Values in different Cultures; Ethical issues in AI, data privacy, and emerging technologies (e.g., bias in algorithms, ethical hacking dilemmas)

UNIT III CORPORATE CULTURE 6 hours

Introduction - Meaning, definition, Nature, and significance – Key elements of corporate culture, shared values, beliefs and norms, rituals, symbols and language - Types of corporate culture - hierarchical culture, market driven – Organization leadership and corporate culture, leadership styles and their impact on culture, transformational leadership and culture change

UNIT IV LEGAL FRAMEWORK 6 hours

Law and Ethics - Salient features of Companies Act 2013, Agencies enforcing Ethical Business Behavior – Legal Impact – Environmental Protection, Fair Trade Practices, legal Compliances – Corporate law, Securities and financial regulations, corporate governance code and principles: DPDP Act; Ethical considerations in Digital privacy

UNIT V CORPORATE GOVERNANCE

6 hours

Introduction - Meaning – Corporate governance code, transparency & disclosure - Role of auditors, board of directors and shareholders. Global issues, accounting and regulatory framework - Corporate scams - Committees in India and abroad, corporate social responsibility (CSR) BoDs composition, Cadbury Committee - Various committees - Reports - Benefits and Limitations; ESG (Environmental, Social, Governance) reporting and its relevance to Indian start-ups/tech companies

Course Outcomes:

After completing this Unit, students will be able to

CO1: Understand the Ethics and different types of ethics. (L2)

CO2: Understand business ethics and ethical practices in management (L2)

CO3: Understand the role of ethics in management (L2)

CO4: Apply the knowledge of professional ethics & technical ethics (L3)

CO5: Analyze corporate law, ethics, codes & principles (L4)

Textbook(s)

1. CSV Murthy: Business Ethics and Corporate Governance, Himalaya Publishing House, 2022
2. Linda K. Trevino & Katherine A. Nelson: Managing Business Ethics: Straight Talk about How to Do It Right, Wiley, 8E, 2025

Reference Books

1. Domènec Melé: Business Ethics in Action: Managing Human Excellence, Bloomsbury, 3e, Nov., 2025
2. Andrea Bonime-Blanc: Governing Pandora: Leading in the Age of Generative AI and Exponential Technology, Georgetown University Press, February, 2026

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Management Courses

23HUM802 PRINCIPLES OF MANAGEMENT

L T P C
2 0 0 2

Pre-requisite

Nil

Course Description:

The course provides students with a practical and concrete explanation of management concepts and techniques they will need to manage today's and tomorrow's organizations. The course will follow the "planning, organizing, leading, controlling" format of managerial functions while putting together many small pictures presented by individual modules into one bigger meaningful picture in which managerial knowledge would apply. At the end of the course students are expected to understand role of components of bigger picture and interactions between and among components.

Course Objectives:

This course enables students to:

1. Describe the concepts of Management theories, approaches and their application with organizations around us
2. Know the concepts of planning and management
3. Explain the basic concepts of organization, types and structure of organization
4. Make the students know leading, good communication, theories of motivation

UNIT I INTRODUCTION TO MANAGEMENT

6 hours

Introduction to Management and Organizations- Management definition, skills, roles, goals and functions of a manager, organization, value of studying management - Managing in a Global Environment- Global Perspective, Understanding global environment

UNIT II PLANNING

6 hours

Decision-making process, Types of decisions and decision making conditions, styles, biases and errors, Planning: Meaning of planning, establishing goals and developing plans - Strategic Management-Importance of strategic management, strategic management process, types of organizational strategies; Basics of agile and digital project management in engineering organizations

UNIT III ORGANIZING

6 hours

Organization vs organizing - Organizational structures – Principles and types of organizational structure - Departmentation – decentralization – delegation of Authority

UNIT IV COMMUNICATION, MOTIVATION & LEADING

6 hours

Functions of communication, Inter-personal communication –Motivation: Theories of motivation and current issues in motivation. Leading: Leaders and Leadership, Leadership theories - Leadership in virtual/hybrid tech teams and Indian industry case studies (e.g., Infosys, Tata).in digital privacy

UNIT V CONTEMPORARY ISSUES IN MANAGEMENT

6 hours

Adapting to rapid technological advancements (AI integration), managing hybrid/remote work, and fostering employee well-being amid high burnout rates, value-chain management – Diversity-Equity- Inclusion – Communication gaps – environmental sustainability

Course Outcomes:

After completing this Unit, students will be able to

CO1: Understand the various concepts, approaches and theories of management in the real situation (L2)

CO2: Analyze the concept of planning and apply on the decisions in strategic management (L3, L4)

CO3: Compare organization structure designs and chart diligently with theoretical learning concepts (L4)

CO4: Apply communication and theories of motivation in an organization (L3)

CO5: Understand various tools for controlling organizational performance, management audit and apply to achieve the corporate objectives (L2, L3)

Textbook(s)

1. Stephen P. Robbins, Mary Coulter, and others, MANAGEMENT, Pearson, 16E, 2024
2. P.C. Tripathi and P.N. Reddy: PRINCIPLES OF MANAGEMENT, McGrawHill, 2021

Reference Books

1. Mohit Tiwari and Tripti Tiwari: PRINCIPLES OF MANAGEMENT FOR ENGINEERS, Leilani Katie Publications, November, 2025
2. J K Mitra, PRINCIPLES AND PRACTICE OF MANAGEMENT, Oxford University Press, 2023

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Management Courses

23HUM803 HUMAN RESOURCE DEVELOPMENT

L T P C
2 0 0 2

Pre-requisite Nil

Course Description:

The course content includes: Introduction to HRM, strategic human resource challenges, work flows, job analysis, managing diversity, concepts, goals, mechanism and system of HRD, recruitment and selection, downsizing and outplacement, appraising and managing employee performance, training, career development, managing compensation, rewarding performance, designing benefit plans, employee relation and employee discipline, and workplace safety and health.

Course Objectives:

This course enables students to:

1. Explain the nature and scope of HRM, its functions, policies and strategies
2. Describe the human resource planning, work analysis and importance in designing jobs
3. Know the recruitment, selection and the process of performance appraisal
4. Make the student to learn about training and development, compensation management
5. To appraise them of AI applications in HRD

UNIT I INTRODUCTION 6 hours

Understanding the nature and scope of Human Resource Management- Definition, Evolution of HRD, Functions - objectives, organization of department, Role and responsibility of HRM.

UNIT II HUMAN RESOURCE PLANNING 6 hours

Human Resource Planning- Factors affecting HRP, the planning process, managerial succession planning. Job Analysis, Methods of collecting job data, Competency based Job Analysis, Job design Approach

UNIT III RECRUITMENT, SELECTION & PERFORMANCE APPRAISAL 6 hours

Recruiting and selecting employees-, Selection process. Performance Management, Process of Performance Appraisal, Bell curve, Methods of Performance Appraisal - AI in recruitment, ATS and performance tracking tools (relevant for tech/engineering roles).

UNIT IV TRAINING AND DEVELOPMENT 6 hours

Meaning – importance and benefits of Training and Development, Training v/s Development – Training Methods - challenges in training - Career development: Definition-objectives—importance of career development – HR analytics

UNIT V AI APPLICATIONS IN HRD 6 hours

AI Impact – adoption of AI for human resource development – integration of AI into HRD – goal setting and OKR, content management, on-boarding support, handling performance bias, employee engagement and retention; Managing remote/hybrid teams and employee engagement.

Course Outcomes:

After completing this Unit, students will be able to

CO1: Understand the concept of HRM, its nature, scope, functions, policies and strategies (L2)

CO2: Analyze human resource planning and apply in designing jobs (L3, L4)

CO3: Evaluate the recruitment, selection and the process of performance appraisal (L5)

CO4: Understand the importance of training and development activities, compensation management (L2)

CO5: Understand the AI applications in HRD and apply the applications in a real-time setting (L2, L3)

Textbook(s)

1. Stephen P. Robbins, Mary Coulter, and others, MANAGEMENT, Pearson, 16E, 2024
2. P.C. Tripathi and P.N. Reddy: PRINCIPLES OF MANAGEMENT, McGrawHill, 2021

Reference Books

1. Mohit Tiwari and Tripti Tiwari: PRINCIPLES OF MANAGEMENT FOR ENGINEERS, Leilani Katie Publications, November, 2025
2. Andrea Bonime-Blanc: Governing Pandora: Leading in the Age of Generative AI and Exponential Technology, Georgetown University Press, February, 2026

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Management Courses

23HUM804 MANAGEMENT SCIENCE

L T P C
2 0 0 2

Pre-requisite: Nil

Course Description:

This course provides a comprehensive understanding of the core concepts and techniques of management science with a focus on their application in engineering and industrial organizations. It covers the evolution of management thought, operations management, human resource management practices, project management tools (PERT/CPM), and marketing management. The course emphasizes practical tools such as work study, quality control, inventory management, strategic analysis (SWOT), and contemporary issues in modern management and technology, enabling students to apply management principles effectively in real-world technical environments.

Course Objectives:

This course enables students to:

1. Provide fundamental knowledge of management concepts, principles, schools of thought, and various organizational designs.
2. Familiarize students with operations management principles, including plant layout, production methods, work study, quality control, inventory management, TQM, Six Sigma, SCM, and ERP.
3. Impart knowledge of human resource management practices such as job analysis, recruitment, selection, training & development, performance appraisal, and wage administration.
4. Develop skills in project management using network analysis techniques like PERT and CPM, including project crashing and cost analysis.
5. Introduce the concepts of marketing management, marketing mix, customer relationship management (CRM), and contemporary issues in modern management and technology.

UNIT I INTRODUCTION TO MANAGEMENT SCIENCE

6 hours

Management - Concept and meaning - Nature-Functions - Management as a Science and Art and both. Schools of Management Thought - Taylor's Scientific Theory-Henry Fayol's principles - Elton Mayo's Human relations - Organizational Designs - Line organization - Line & Staff Organization - Functional Organization - Matrix Organization - Project Organization - Committee form of Organization

UNIT II OPERATIONS MANAGEMENT

6 hours

Principles and Types of Plant Layout - Methods of Production (Job, batch and Mass Production), Work Study - Statistical Quality Control- **Material Management** - Objectives - Inventory-Functions - Types, Inventory Techniques - EOQ-ABC Analysis - Total Quality Management (TQM) - Six Sigma Concept - Supply Chain Management (SCM) - Enterprise Resource Planning (ERP)

UNIT III HUMAN RESOURCE MANAGEMENT

6 hours

HRM - Definition and Meaning – Nature - Managerial and Operative functions - Job Analysis - Human Resource Planning (HRP) - Employee Recruitment-Sources of Recruitment - Employee Selection - Process - Employee Training and Development - methods - Performance Appraisal Concept - Methods of Performance Appraisal – Bell Curve Performance - Wage and Salary Administration

UNIT IV PROJECT MANAGEMENT

6 hours

Project Management - Basic simulation and decision support systems - SWOT Analysis - Network Analysis - Programme Evaluation and Review Technique (PERT) - Critical Path Method (CPM) Identifying Critical Path - Probability of Completing the project within given time - Project Cost- Analysis - Project Crashing (Simple problems).

UNIT V MARKETING MANAGEMENT

6 hours

Marketing Management - Concept - Meaning - Nature-Functions of Marketing - Marketing Mix - Channels of Distribution - Advertisement and Sales Promotion - Marketing Strategies based on Product Life Cycle. Customer Relations Management (CRM) - Performance Management – employee engagement and retention - Business Process Re-engineering and Bench Marking

Course Outcomes:

After completing this Unit, students will be able to

CO1: Remember the concepts & principles of management and designs of organization in a practical world (L1)

CO2: Understand the knowledge of Work-study principles & Quality Control techniques in industry (L2)

CO3: Apply the HRM processes in organization (L3)

CO4: Evaluate PERT/CPM Techniques for projects of an enterprise and estimate time & cost of project & to analyze the business through SWOT (L5)

CO5: Apply Marketing Management in organizations (L5)

Textbook(s)

1. Frederick S. Hillier and Mark S. Hillier: Introduction to Management Science: A Modeling and Case Studies Approach with Spreadsheets, McGrawHill, 7e, 2023
2. AR Aryasri: MANAGEMENT SCIENCE, Tata McGrawHill, 4e, 2011

Reference Books

1. Stoner, Freeman, Gilbert: MANAGEMENT, Pearson Education, New Delhi, 2019.
2. Koontz & Weihrich, *Essentials of Management*, 11e, TMH, 2020.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Management Courses

23HUM805 NATIONAL CADET CORPS

L T P C
2 0 0 2

Pre-requisite: Nil

Course Description:

The course aims to instil knowledge about NCC, national integration, self-awareness, and social service, while promoting critical thinking and teamwork

Course Objectives:

This course enables students

1. To develop discipline, leadership, and character among students
2. To impart basic military training and physical fitness
3. To inculcate spirit of patriotism and social responsibility
4. To enhance personality, teamwork, and self-confidence

UNIT I NCC ORGANIZATION & LEADERSHIP

6 hours

Introduction to NCC: Aim, Motto, Objectives, Organizational structure of NCC, Role and responsibilities of cadets, Leadership traits and qualities, Types of leadership and leadership development, Personality development and communication skills

UNIT II DRILL & PARADE

6 hours

Importance and principles of drill, General drill instructions and words of command, Basic drill movements: *Savdhan, Vishram, Aaram Se, Dahine Mud, Bayen Mud, Piche Mud*, Formation of squad and line, Saluting and marching techniques, Practical drill sessions

UNIT III WEAPON TRAINING AND FIELD CRAFT

6 hours

Introduction to small arms (.22 rifle), Safety precautions and handling of weapons, Parts and mechanism of rifle, Aiming and firing techniques (theory), Field craft basics: camouflage and concealment, Introduction to map reading

UNIT IV PHYSICAL FITNESS AND ADVENTURE ACTIVITIES

6 hours

Importance of physical fitness in NCC, Basic exercises and endurance training, Obstacle training and its benefits, Yoga and mental fitness, Adventure activities: trekking, mountaineering, cycling, Disaster management basics and first aid

UNIT V SOCIAL AWARENESS AND NATIONAL INTEGRATION

6 hours

Social service and community development, Environmental awareness and sustainability, Swachh Bharat and health awareness programs, National integration and unity in diversity, Role of NCC in nation building, Participation in Camps and Community Service

Course Outcomes:

After completing this Unit, students will be able to

- CO1:** Understand and describe the aims and objectives of the National Cadet Corps (NCC) vis-à-vis concepts of leadership traits, personality development (discipline), and communication skills in the context of NCC) (L1)
- CO2:** Demonstrate basic drill movements, words of command, saluting, marching techniques and parade procedures. (L2)
- CO3:** Apply the fundamentals of weapon training, safety precautions, field craft, camouflage, concealment and map reading. (L3)
- CO4:** Demonstrate physical fitness through basic exercises, endurance training, obstacle courses, yoga and adventure activities (L3)
- CO5:** Develop social responsibility, national integration, environmental awareness, patriotism and contribute to community service and nation-building activities. (L3 / L4)

Textbook(s)

1. R. Gupta: Handbook for NCC Cadets for A, B, & C Certificates, Kindle Edition, Ramesh Publishing House, 2026
2. Major RC Mishra & Sanjay Sharma: A Hand Book of NCC, Kanti Prakashan Etawah, 2025

Reference Books

1. RPH Team, A Concise Handbook of NCC Cadets For A / B & C Certificate Examinations Including N=Model Papers & Solved Questions 2018 In English, RPH, 2018
2. R Gupta NCC (National Cadet Corps) - (A Concise Handbook Of Ncc Cadets For "A", "B" & "C" Certificate Examinations) Including Model Papers & Solved Questions , New 31th Edition (August, 2025)

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

SKILL ENHANCEMENT COURSES

**B. Tech II Year I Semester
Skill Enhancement Course - I**

23CSD601 PYTHON PROGRAMMING

L	T	P	C
1	0	2	2

Course Objectives:

The main objectives of the course are to

1. Introduce core programming concepts of Python programming language.
2. Learn to solve problems using Python conditional and loops.
3. Demonstrate about Python data structures like Lists, Tuples, Sets and dictionaries
4. Implement Functions, Modules and Regular Expressions in Python Programming and to create practical and contemporary applications.
5. Demonstrate to do input/output with files in Python.

UNIT I	DATA TYPES, EXPRESSIONS AND CONTROL FLOW STATEMENTS	6 hours
---------------	--	----------------

Introduction: Identifiers, Keywords, Statements and Expressions, Variables, Operators, Precedence and Associativity, Data Types, Indentation, Comments, Reading Input, Print Output, Type Conversions, the type () Function and Is Operator, Dynamic and Strongly Typed Language.

Control Flow Statements: if statement, if-else statement, if...elif...else, Nested if statement, while Loop, for Loop, continue and break Statements, Catching Exceptions Using try and except Statement.

Sample Experiments:

1. Write a program to find the largest element among three Numbers.
2. Write a program to swap two numbers without using a temporary variable.
3. Demonstrate the following Operators in Python with suitable examples.
 - i) Arithmetic Operators
 - ii) Relational Operators
 - iii) Assignment Operators
 - iv) Logical Operators
 - v) Bit wise Operators
 - vi) Ternary Operator
 - vii) Membership Operators
 - viii) Identity Operators

UNIT II	LISTS & DICTIONARIES	6 hours
----------------	---------------------------------	----------------

Lists: Creating Lists, Basic List Operations, Indexing and Slicing in Lists, Built-In Functions Used on Lists, List Methods, del Statement.

Dictionaries: Creating Dictionary, Accessing and Modifying key:value Pairs in Dictionaries, Built-In Functions Used on Dictionaries, Dictionary Methods, del Statement.

Sample Experiments:

4. Write a program to perform the given operations on a list:
 - i. Addition
 - ii. Insertion
 - iii. slicing
5. Write a program to perform any 5 built-in functions by taking any list.
6. Write a program to sum all the items in a given dictionary.

UNIT III TUPLES AND SETS

6 hours

Tuples and Sets: Creating Tuples, Basic Tuple Operations, tuple() Function, Indexing and Slicing in Tuples, Built-In Functions Used on Tuples, Relation between Tuples and Lists, Relation between Tuples and Dictionaries, Using zip() Function, Sets, Set Methods, Frozenset.

Sample Experiments:

7. Write a program to create tuples (name, age, address, college) for at least two members and concatenate the tuples and print the concatenated tuples.
8. Write a program to count the number of vowels in a string (No control flow allowed).
9. Write a program to check if a given key exists in a dictionary or not.

UNIT IV FUNCTIONS & STRINGS

6 hours

Functions: Built-In Functions, Commonly Used Modules, Function Definition and Calling the function, return Statement and void Function, Scope and Lifetime of Variables, Default Parameters, Keyword Arguments, *args and **kwargs, Command Line Arguments.

Strings: Creating and Storing Strings, Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, String Methods, Formatting Strings.

Sample Experiments:

10. Write a program to define a function with multiple return values.
11. Write a program to define a function using default arguments.
12. Write a program to find the length of the string without using any library functions.

UNIT V FILES HANDLING IN PYTHON

6 hours

Files: Types of Files, Creating and Reading Text Data, File Methods to Read and Write Data, Reading and Writing Binary Files, Pickle Module, Reading and Writing CSV Files, Python os and os.path Modules.

Sample Experiments:

13. Write a program to sort words in a file and put them in another file. The output file should have only lower-case words, so any upper-case words from source must be lowered.
14. Implement a Python program to print each line of a file in reverse order.
15. Write a Python program to compute the number of characters, words and lines in a file.

Course Outcomes:

Upon successful completion of the course, students will be able to

- CO1: Understand to adept command of Python syntax, deftly utilizing variables, data types, and control structures.
- CO2: Interpret Strings, functions, modules, exception handling to engineer robust and efficient code solutions.
- CO3: Apply Python programming concepts like Lists and Dictionary to solve a variety of computational problems.
- CO4: Build and manipulate fundamental data structures such as tuples and sets.
- CO5: Demonstrate file handling concepts in python.

Textbooks:

1. Gowri 251hankar S, Veena A., Introduction to Python Programming, CRC Press.
2. Python Programming, S Sridhar, J Indumathi, V M Hariharan, 2nd Edition, Pearson, 2024.

Reference Books:

1. Introduction to Programming Using Python, Y. Daniel Liang, Pearson.
2. Paul Deitel and Harvey Deitel, “Python for Programmers”, Pearson Education, 1st Edition, 2021.

Online Resources:

1. <https://www.coursera.org/learn/python-for-applied-data-science-ai>
2. <https://www.coursera.org/learn/python?specialization=python#syllabus>

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech II Year II Semester

Skill Enhancement Course - II

23CSD602 EXPLORATORY DATA ANALYSIS USING PYTHON

L T P C

0 1 2 2

Course Objectives:

- This course introduces the fundamentals of Exploratory Data Analysis
- It covers essential exploratory techniques for understanding multivariate data by summarizing it through statistical methods and graphical methods

UNIT I

6 hours

Exploratory Data Analysis Fundamentals: Understanding data science, The significance of EDA, Steps in EDA, Making sense of data, Numerical data, Categorical data, Measurement scales, Comparing EDA with classical and Bayesian analysis, Software tools available for EDA, Getting started with EDA.

Sample Experiments:

1. a) Download Dataset from Kaggle using the following link :
<https://www.kaggle.com/datasets/sukhmanibedi/cars4u>
b) Install python libraries required for Exploratory Data Analysis (numpy, pandas, matplotlib, seaborn)
2. Perform Numpy Array basic operations and Explore Numpy Built-in functions.
3. Loading Dataset into pandas dataframe
4. Selecting rows and columns in the dataframe

UNIT II

6 hours

Visual Aids for EDA: Technical requirements, Line chart, Bar charts, Scatter plot using seaborn, Polar chart, Histogram, Choosing the best chart

Case Study: EDA with Personal Email, Technical requirements, Loading the dataset, Data transformation, Data cleansing, Applying descriptive statistics, Data refactoring, Data analysis

Sample Experiments:

5. Apply different visualization techniques using sample dataset
 - a) Line Chart
 - b) Bar Chart
 - c) Scatter Plots
 - d) Bubble Plot
6. Generate Scatter Plot using seaborn library for iris dataset
7. Apply following visualization Techniques for a sample dataset
 - a) Area Plot
 - b) Stacked Plot
 - c) Pie chart
 - d) Table Chart
8. Generate the following charts for a dataset.
 - a) Polar Chart
 - b) Histogram
 - c) Lollipop chart
9. Case Study: Perform Exploratory Data Analysis with Personal Email Data

UNIT III

6 hours

Data Transformation:Merging database-style dataframes, Concatenating along with an axis, Merging on index, Reshaping and pivoting, Transformation techniques, Handling missing data, Mathematical operations with NaN, Filling missing values, Discretization and binning, Outlier detection and filtering, Permutation and random sampling, Benefits of data transformation, Challenges

Sample Experiments:

10. Perform the following operations
 - a) Merging Dataframes
 - b) Reshaping with Hierarchical Indexing
 - c) Data Deduplication
 - d) Replacing Values
11. Apply different Missing Data handling techniques
 - a) NaN values in mathematical Operations
 - b) Filling in missing data
 - c) Forward and Backward filling of missing values
 - d) Filling with index values
 - e) Interpolation of missing values
12. Apply different data transformation techniques
 - a) Renaming axis indexes
- b) Discretization and Binning
 - c) Permutation and Random Sampling
 - d) Dummy variables

UNIT IV

6 hours

Descriptive Statistics:Distribution function, Measures of central tendency, Measures of dispersion, Types of kurtosis, Calculating percentiles, Quartiles, Grouping Datasets, Correlation, Understanding univariate, bivariate, multivariate analysis, Time Series Analysis

Sample Experiments:

13. Study the following Distribution Techniques on a sample data
 - a) Uniform Distribution
 - b) Normal Distribution
 - c) Gamma Distribution
 - d) Exponential Distribution
 - e) Poisson Distribution
 - f) Binomial Distribution
14. Perform Data Cleaning on a sample dataset.
15. Compute measure of Central Tendency on a sample dataset
 - a) Mean b) Median c) Mode
16. Explore Measures of Dispersion on a sample dataset
 - a) Variance b) Standard Deviation c) Skewness d) Kurtosis

17. a) Calculating percentiles on sample dataset
b) Calculate Inter Quartile Range(IQR) and Visualize using Box Plots
18. Perform the following analysis on automobile dataset.
a) Bivariate analysis b)Multivariate analysis
19. Perform Time Series Analysis on Open Power systems dataset

UNIT V

6 hours

Model Development and Evaluation:Unified machine learning workflow, Data preprocessing, Data preparation, Training sets and corpus creation, Model creation and training, Model evaluation, Best model selection and evaluation, Model deployment

Case Study:EDA on Wine Quality Data Analysis

Sample Experiments:

20. Perform hypothesis testing using statsmodels library
a) Z-Test b)T-Test
- 21.Develop model and Perform Model Evaluation using different metrics such as prediction score, R2 Score, MAE Score, MSE Score.
22. Case Study: Perform Exploratory Data Analysis with Wine Quality Dataset

Course Outcomes:

At the end of the course student will be able to:

- CO1; Enumerate the fundamentals of Exploratory Data Analysis.
- CO2: Visualize the data using basic graphs and plots.
- CO3: Apply different Data Transformation Techniques.
- CO4: Summarize the data using descriptive statistics.
- CO5: Evaluate the Models and select the best model

Textbooks:

1. Suresh Kumar Mukhiya, Usman Ahmed, Hands-On Exploratory Data Analysis with Python, Packt Publishing, 2020

Reference Books:

1. Ronald K. Pearson, Exploratory Data Analysis Using R, CRC Press, 2020

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Skill Oriented Course II

23CSD603 DevOps

L	T	P	C
1	0	2	2

Pre-requisite : Software Testing, Web Development Basics, Cloud Computing

Course Description:

The DevOps Lab is an immersive hands-on course that equips students with practical experience in applying DevOps principles and tools. Through guided exercises and real-world projects, students will learn to implement version control with Git, automate web testing using Selenium, build CI/CD pipelines, provision infrastructure with IAC tools, utilize Docker and Kubernetes for containerization, and master monitoring solutions. Ideal for software developers, DevOps engineers, and IT professionals, this lab empowers participants to enhance software delivery efficiency and quality.

Course Objectives:

This course enables students

1. To learn DevOps principles and methodologies.
2. To gain hands-on experience in DevOps tools like Git, Selenium, Docker, and Kubernetes.
3. To implement automated web testing using Selenium.
4. To build and optimize CI/CD pipelines for efficient software delivery.
5. To enhance collaboration and efficiency between development and operations teams.

UNIT I INTRODUCTION

6 hours

Introduction, Agile development model, DevOps, and ITIL. DevOps process and Continuous Delivery, Release management, Scrum, Kanban, delivery pipeline, bottlenecks, examples.

1. Implementing Continuous Integration with Version Control
2. Setting Up a Scrum or Kanban Board for Task Management

UNIT II SOFTWARE DEVELOPMENT MODELS AND DEVOPS

6 hours

DevOps Lifecycle for Business Agility, DevOps and Continuous Testing. DevOps influence on Architecture: Introducing software architecture, The monolithic scenario, Architecture rules of thumb, The separation of concerns, Handling database migrations, Microservices, and the data tier, DevOps, architecture, and resilience.

1. Implementing Continuous Testing in the DevOps Lifecycle
2. Microservices Architecture and Resilience in DevOps

UNIT III INTRODUCTION TO PROJECT MANAGEMENT

6 hours

The need for source code control, The history of source code management, Roles and code, source code management system and migrations, Shared authentication, Hosted Git servers, Different Git server implementations, Docker intermission, Gerrit, The pull request model, GitLab.

1. Create a new Git repository and add a README file to it. Commit the changes and push them to the remote repository.
2. Create a new branch called "MITS" and make some changes to a file. Commit the changes and merge the branch with the main branch.
3. Use Git log to view the commit history of a repository and find the commit hash of a specific commit.
4. Clone a Git repository from a remote repository.
5. Push the changes from the local repository to the remote repository.

UNIT IV INTRODUCTION TO SELENIUM AND AUTOMATED WEB TESTING 6 hours

Overview of Automated Web Testing - Setting up the Selenium Environment - Inspecting Web Elements with Selenium - Facebook Login Automation with Selenium- Automated Testing of Google Homepage

1. Open an edge browser and inspect any one web element in Google homepage using selenium.
2. Open a Facebook login page in edge browser and authenticate your account details and display your facebook homepage using selenium.
3. Open a Google home page in edge browser and test all the web elements present in the homepage using selenium.

UNIT V TESTING AND DEVELOPMENT 6 hours

Testing Tools and automation: Various types of testing, Automation of testing Pros and cons, Selenium - Introduction, Selenium features, JavaScript testing, Testing backend integration points, Test-driven development, REPL-driven development Deployment of the system: Deployment systems, Virtualization stacks, code execution at the client, Puppet master and agents, Ansible, Deployment tools: Chef, Salt Stack and Docker

1. Basic Dockers Commands
2. Build and run an HTML webpage displaying "Hello, World!" using Dockers.
3. Build a Dockers image based on the official alpine image that installs the Nano text editor. Run a container from this image and verify that you can use Nano inside the container.
4. Build a Dockers image that pulls MySQL image and execute it with simple query in terminal.
5. Build a Dockers image that pulls MySQL image and create a database using phpmyadmin..

Course Outcomes:

After completing this course, students will be able

CO1: To understand the key principles and practices of DevOps.

CO2: To demonstrate proficiency in using essential DevOps tools like Git, Selenium, Docker, and Kubernetes.

CO3: To successfully implement automated web testing using Selenium for web applications.

CO4: To create and optimize CI/CD pipelines for streamlined software delivery.

CO5: To foster collaboration and efficiency within development and operations teams to improve software development processes..

Text Book(s)

1. "The DevOps Handbook: How to Create World-Class Agility, Reliability, and Security in Technology Organizations" by Gene Kim, Patrick Debois, John Willis, and Jez Humble.IT Revolution Press. 2016

Reference Books

1. "Selenium WebDriver Recipes in Python: The problem-solving guide to Selenium WebDriver in Python" by Zhimin Zhan. Leanpub Publishing, 2018
2. "Continuous Delivery: Reliable Software Releases through Build, Test, and Deployment Automation" by Jez Humble and David Farley.Addison-Wesley, 2010

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Skill Oriented Course II

23CSD604 FULL STACK DEVELOPMENT

L T P C
1 0 2 2

Pre-requisite: JAVA

Course Objectives:

The objectives of the course are to

1. Make use of HTML elements and their attributes for designing static web pages
2. Build a web page by applying appropriate CSS styles to HTML elements
3. Experiment with JavaScript to develop dynamic web pages and validate forms

UNIT I: HTML Fundamentals – Lists, Links, Tables, Forms, and Frames

Lists: Ordered, Unordered, Definition, Nested, Hyperlinks and Images, Tables with formatting, HTML Forms, Frames and Layout Management

Experiments:

1. Create an HTML page demonstrating all types of lists, including nested and definition lists.
2. Design a web page using hyperlinks (<a> tag) with href and target attributes.
3. Create a gallery with thumbnail images linking to full-size versions.
4. Build a timetable using HTML tables with rowspan, colspan, and caption.
5. Design a student registration form using different input types and proper layout with tables.
6. Construct a webpage using frames to display an image, a paragraph, and a hyperlink in three distinct areas. Use the noframes tag for compatibility.

UNIT II: HTML5 and CSS Styling

HTML5 Semantic Tags: <article>, <section>, <header>, etc., Audio & Video embedding, CSS Types: Inline, Internal, External, CSS Selectors: Simple, Combinators, Pseudo-classes/elements, Attribute selectors

Experiments:

1. Develop a page using HTML5 tags like <main>, <nav>, <aside>, <figure>, etc.
2. Embed audio and video files in a web page.
3. Apply all three types of CSS to style HTML elements.
4. Demonstrate various selector types (simple, combinators, pseudo-classes/elements, attribute selectors) in a single web page.

UNIT III: Advanced CSS – Layouts, Box Model and Visual Styling

Color and Background Styling, Font and Text Styling, CSS Box Model, Positioning and Background Effects

Experiments:

1. Demonstrate different color definitions in CSS (hex, RGB, names).
2. Use CSS to place a background image fixed at the center and repeat horizontally.
3. Style text with font size, weight, style, alignment, transformation, and decoration.
4. Illustrate the CSS Box Model using content, padding, border, and margin differences.

UNIT IV: JavaScript – Basics, I/O, Data Types and Logic

Embedding JavaScript (Internal & External), Input and Output, Type Conversion, Conditional Statements & Loops, JavaScript Objects: Pre-defined and User-defined

Experiments:

1. Create web pages with both internal and external JavaScript.
2. Write programs to demonstrate different methods of input and output.
3. Create a voting eligibility checker using prompt, conditional logic, and table output.
4. Use window, document, math, array, string, date, and regex objects in different programs.
5. Validate registration form fields (Name, Mobile, Email) using JavaScript.
6. Perform logic checks using JavaScript:
 - Armstrong number
 - Denomination breakdown of an amount
 - Displaying weekdays using switch
 - Print 1 to 10 using different loops

UNIT V: JavaScript Functions, Events & Database Connectivity

JavaScript Functions and Event Handling, Functional Programming Examples, DOM Manipulation, Intro to Server-side JavaScript with Node.js, Connecting to Databases (MySQL, MongoDB)

Experiments:

1. Create reusable JavaScript functions for:
 - Factorial
 - Fibonacci
 - Prime numbers
 - Palindrome check
2. Design a single-page application with text input and buttons for each of the above functions using event handlers.
3. Use for-in, for-of, and forEach loops to print object data.
4. Introduction to Node.js environment – Setup and sample console.log() app.
5. Connect a sample JavaScript app to MySQL or MongoDB and perform basic CRUD operations (optional/demonstration-based if not in lab scope).

Course Outcomes:

After completion of the course, Students will be able to

CO1: Design Websites.

CO2: Apply Styling to web pages.

CO3: Make Web pages interactive.

CO4: Design Forms for applications.

CO5: Choose Control Structure based on the logic to be implemented.

Textbooks:

1. John Dean, Web Programming with HTML5, CSS and JavaScript, Jones & Bartlett Learning, 2019.

2. <https://www.w3schools.com/css>
3. <https://www.w3schools.com/js/>
4. <https://www.w3schools.com/nodejs>
5. <https://www.w3schools.com/typescript>

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

Skill Enhancement Course – III

23CSD605 MLOps

L	T	P	C
1	0	2	2

Pre-requisite: Nil

1. Knowledge of Linux Operating system, installation and configuration of services and command line basics.
2. Basics of Machine Learning.
3. Knowledge Development Life cycle, development frameworks and DevOps.

Course Objectives:

The main objectives of the course is to

1. The objective of this course is to understand the fundamentals of MLOps and its significance in the ML lifecycle.
2. Students will Learn various tools and technologies used in MLOps to design and build scalable ML
3. pipelines.
4. Students will get exposure to deploy ML models.
5. Students will learn techniques for monitoring, debugging, and optimizing ML systems.
6. Finally, students will explore methods for reproducibility, version control, and model governance .

UNIT I

6 hours

Introduction to Machine Learning Operations Overview of MLOps and its importance, Understanding the challenges in deploying and managing ML models, ML development lifecycle, Role of MLOps in the ML development lifecycle, Introduction to DevOps and its application to ML, MLOps in Practice.

Experiment 1: Exploring the ML Lifecycle and MLOps Workflow

Create a visual representation (flowchart or diagram) of the Machine Learning lifecycle and mark the stages where MLOps practices are applied. Explain the role of MLOps in each stage (e.g., data handling, model training, deployment, monitoring).

Experiment 2: Setting Up Version Control for an ML Project Using Git

Create a new Git repository for a sample machine learning project. Add a basic Python script (e.g., a simple data loading or print statement), commit your changes, and push the project to GitHub. Demonstrate basic Git commands: init, add, commit, push, and branch.

UNIT II

6 hours

Data Management, Model Development and Training for MLOps Model Development and Training for MLOps, Data versioning and reproducibility, Data preprocessing and feature engineering pipelines, Data validation and monitoring, Data quality assurance and governance, Model versioning and tracking, Model training pipelines and automation, Hyperparameter tuning and model selection, Model evaluation and validation techniques.

Experiment 3: Data Versioning and Preprocessing with DVC

Download a sample dataset (e.g., Iris or Titanic), initialize a Git repository, and set up DVC to track the dataset. Perform basic preprocessing tasks like removing null values and encoding categorical features. Use DVC to version control the raw and processed data files.

Experiment 4: Model Training and Tracking with MLflow

Using the preprocessed dataset, train a simple machine learning model (e.g., Decision Tree or Logistic Regression) using scikit-learn. Set up MLflow to track parameters (e.g., max_depth), metrics (e.g., accuracy), and save the trained model. Visualize and compare multiple runs in the MLflow UI.

UNIT III

6 hours

Model Deployment and Serving, Continuous Integration and Delivery (CI/CD) for ML Model packaging and containerization (e.g., Docker), Infrastructure provisioning and orchestration (e.g., Kubernetes), Deploying models as scalable services, managing model endpoints and versioning, Version control and collaboration (e.g., Git), Building reproducible ML pipelines, Automated testing and code quality checks, Continuous integration and deployment strategies.

Experiment 5: Containerizing and Deploying a Machine Learning Model Using Docker

Train a simple ML model (e.g., logistic regression or decision tree) using scikit-learn. Save the model and build a Flask-based API to serve predictions. Containerize the entire application using Docker by writing a Dockerfile, and run it as a container to test the deployment.

Experiment 6: Building a CI/CD Pipeline for an ML Project Using GitHub Actions

Create a GitHub repository for a sample ML project. Set up a GitHub Actions workflow to automatically run a test script and lint your code (using pytest and flake8) every time new code is pushed.

UNIT IV

6 hours

Monitoring and Performance Optimization Monitoring model performance and behavior, Real-time and batch monitoring techniques, Logging and error tracking in ML systems, Performance optimization and scalability considerations.

Experiment 7: Real-Time Model Monitoring with Prometheus and Grafana

Deploy a simple ML model (served via Flask). Integrate Prometheus to collect metrics like request count, response time, and errors. Use Grafana to visualize these metrics in real-time dashboards.

Experiment 8: Monitoring Data Drift and Model Performance with Evidently AI

Use the Evidently AI library to compare the training data and incoming test data for a deployed model. Generate a data drift report and a performance dashboard.

UNIT V

6 hours

Cloud Platforms and Infrastructure for MLOps Introduction to cloud platforms (e.g., AWS, Azure, GCP), Deploying ML models on cloud infrastructure, managing resources and scaling ML workloads, Cost optimization strategies for ML systems. Infrastructure as Code (IaC) for ML: Use tools like Terraform or AWS CloudFormation to manage ML infrastructure. Experiment with provisioning and automating the setup of ML environments.

Experiment 9: Deploying a Machine Learning Model on AWS Using SageMaker

Train a simple machine learning model (e.g., regression or classification) locally, and deploy it using Amazon SageMaker as a hosted endpoint.

Experiment 10: Automating ML Infrastructure with Terraform (Infrastructure as Code)

Use Terraform to provision a basic cloud infrastructure for running an ML model on AWS (e.g., EC2 instance with S3 bucket and IAM role).

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Automate the deployment of ML models into the core software system or as a service component.

CO2: Deploy machine learning models in a production environment.

CO3: Implement model monitoring and performance evaluation.

CO4: Manage and scale machine learning infrastructure.

CO5: Apply industry best practices for MLOps and DevOps in data science.

Textbooks:

1. Noah Gift , "Practical MLOps: A Guide to Building Real-World Machine Learning Systems", O'Reilly, First Edition, September 2021.

3. Sridhar Alla, Suman Kalyan Adari, "Beginning MLOps with MLFlow: Deploy Models in AWS SageMaker, Google Cloud, and Microsoft Azure", Apress publication, 1st edition, 8 December 2020.

Online Learning Resources

- Coursera: "Machine Learning Engineering for Production (MLOps)" by deeplearning.ai. This course
1. provides a comprehensive introduction to MLOps, covering topics like data and model versioning, deployment, monitoring, and more.
 2. Udacity: "Machine Learning Deployment" by Google Cloud. This course focuses on deploying and

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Skill Enhancement Course – IV

23ENG601 SOFT SKILLS

L T P C
1 0 2 2

Pre-requisite: Nil

Course Objectives:

The main objectives of the course is to

1. To encourage all round development of the students by focusing on soft skills
2. To make the students aware of critical thinking and problem-solving skills
3. To develop leadership skills and organizational skills through group activities
4. To function effectively with heterogeneous teams

UNIT I SOFT SKILLS & COMMUNICATION SKILLS

6 hours

Introduction, meaning, significance of soft skills – definition, significance, types of communication skills - Intrapersonal & Inter-personal skills - Verbal and Non-verbal Communication

Activities:

Intrapersonal Skills- Narration about self- strengths and weaknesses- clarity of thought – self- expression – articulating with felicity (The facilitator can guide the participants before the activity citing examples from the lives of the great, anecdotes and literary sources)

Interpersonal Skills- Group Discussion – Debate – Team Tasks - Book and film Reviews by groups - Group leader presenting views (non- controversial and secular) on contemporary issues or on a given topic.

Verbal Communication- Oral Presentations- Extempore- brief addresses and speeches- convincing- negotiating- agreeing and disagreeing with professional grace. **Non-verbal communication** – Public speaking – Mock interviews – presentations with an objective to identify non- verbal clues and remedy the lapses on observation

UNIT II CRITICAL THINKING

6 hours

Active Listening – Observation – Curiosity – Introspection – Analytical Thinking – Open-mindedness – Creative Thinking

Activities:

Gathering information and statistics on a topic - sequencing – assorting – reasoning – critiquing issues placing the problem – finding the root cause - seeking viable solution – judging with rationale – evaluating the views of others - Case Study, Story Analysis

UNIT III PROBLEM SOLVING & DECISION MAKING

6 hours

Meaning & features of Problem Solving – Managing Conflict – Conflict resolution – Methods of decision making – Effective decision making in teams – Methods & Styles

Activities:

Placing a problem which involves conflict of interests, choice and views – formulating the problem – exploring solutions by proper reasoning – Discussion on important professional, career and organizational decisions and initiate debate on the appropriateness of the decision. Case Study & Group Discussion

UNIT IV EMOTIONAL INTELLIGENCE & STRESS MANAGEMENT

6 hours

Managing Emotions – Thinking before Reacting – Empathy for Others – Self-awareness – Self-Regulation – Stress factors – Controlling Stress – Tips

Activities:

Providing situations for the participants to express emotions such as happiness, enthusiasm, gratitude, sympathy, and confidence, compassion in the form of written or oral presentations. Providing opportunities for the participants to narrate certain crisis and stress –ridden situations caused by failure, anger, jealousy, resentment and frustration in the form of written and oral presentation, Organizing Debates

UNIT V LEADERSHIP SKILLS

6 hours

Team-Building – Decision-Making – Accountability – Planning – Public Speaking – Motivation – Risk Taking
- Team Building - Time Management

Activities:

Forming group with a consensus among the participants- choosing a leader- encouraging the group members to express views on leadership- democratic attitude- sense of sacrifice – sense of adjustment – vision – accommodating nature- eliciting views on successes and failures of leadership using the past knowledge and experience of the participants, Public Speaking, Activities on Time Management, Motivation, Decision Making, Group discussion etc.

NOTE-:

1. The facilitator can guide the participants before the activity citing examples from the lives of the great, anecdotes, epics, scriptures, autobiographies and literary sources which bear true relevance to the prescribed skill.
2. Case studies may be given wherever feasible for example for Decision Making- The decision of King Lear or for good Leadership – Mahendar Singh Dhoni etc.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Memorize various elements of effective communicative skills.

CO2: Interpret people at the emotional level through emotional intelligence.

CO3: Apply critical thinking skills in problem solving.

CO4: Analyse the needs of an organization for team building.

CO5: Judge the situation and take necessary decisions as a leader.

CO6: Develop social and work-life skills as well as personal and emotional well-being.

Textbooks:

Skill Enhancement Course – V

23CSD605 GENERATIVE AI

L T P C
3 0 0 3

Pre-requisite: Discrete Mathematics, Data Structures and Algorithms, Probability and Statistics, Linear Algebra, Machine Learning Fundamentals, Deep Learning Basics, Python Programming

Course Description:

This course introduces the principles, models, and applications of Generative Artificial Intelligence, focusing on foundation models, large language models (LLMs), diffusion models, generative adversarial networks (GANs), multimodal systems, and prompt engineering. It covers text, image, audio, code generation, and deployment of GenAI applications. The course equips students with the skills to build, evaluate, and apply generative AI solutions for real-world applications.

Course Objectives:

The main objectives of the course are to:

1. Introduce the fundamentals of Generative AI, foundation models, and ethical considerations in generative systems
2. Understand transformer architectures, large language models, embeddings, and prompt engineering techniques
3. Apply diffusion models, GANs, and evaluation methods for image and video generation tasks
4. Analyze multimodal generation techniques for audio, code, and vision-language applications
5. Develop the ability to build, deploy, and evaluate Generative AI applications for industry use cases

UNIT I INTRODUCTION TO GENERATIVE AI AND FOUNDATION MODELS 9 hours

Introduction to Artificial Intelligence and Generative AI, Types of Generative Models: VAEs, GANs, Autoregressive Models, Foundation Models: GPT, BERT, DALL·E, Codex, Ethical Considerations and Bias in Generative AI, Applications of Generative AI in Art, Text, Music, and Code

1. Explore GPT-3.5/4 using OpenAI API or HuggingFace
2. Build a simple text generator using n-grams or RNNs
3. Prompt engineering basics using ChatGPT playground or Google Gemini

UNIT II TEXT GENERATION AND LARGE LANGUAGE MODELS (LLMs) 9 hours

Architecture of LLMs: Transformers, Attention Mechanism, Fine-tuning vs Prompt-tuning LLMs, Tokenization, Embeddings, and Positional Encoding, Use cases: Summarization, Translation, Chatbots, Responsible AI: Hallucination, Bias, and Toxicity in LLMs

1. Text summarization using HuggingFace Transformers (e.g., BART, T5)
2. Create a basic Q&A bot using a pre-trained LLM
3. Use LangChain or RAG (Retrieval Augmented Generation) to build a document-based chatbot

UNIT III IMAGE AND VIDEO GENERATION WITH DIFFUSION AND GANS 9 hours

Generative Adversarial Networks (GANs): DCGAN, StyleGAN, Diffusion Models: DALL·E, Stable Diffusion, Image-to-Image, Text-to-Image, and Video Generation, Evaluation Metrics: FID, L, Applications in Design, Medical Imaging, and Gaming

1. Generate faces using StyleGAN2 or a similar pre-trained model
2. Use Stable Diffusion to generate images from text prompts
3. Modify an image using inpainting/outpainting with diffusion models

UNIT IV AUDIO, CODE, AND MULTIMODAL GENERATION

9 hours

Audio Generation: WaveNet, MusicLM, Voice Cloning, Code Generation: Codex, GitHub Copilot, Gemini Code, Multimodal Models: CLIP, Flamingo, Gemini, Applications in Voice Assistants, Code Automation, EdTech, Ethical concerns: Deepfakes, IP Rights in Generated Content

1. Generate music or speech using AudioLM or Bark
2. Auto-generate Python code using OpenAI Codex
3. Build a multimodal app using OpenAI Vision API or Gemini Pro Vision

UNIT V BUILDING GENAI APPLICATIONS AND INDUSTRY USE CASES

9 hours

Low-code/No-code Generative AI Platforms (e.g., Canva Magic, RunwayML), GenAI for Enterprises: Healthcare, Education, Marketing, Legal, Building and Deploying GenAI Apps: Streamlit, Gradio, FastAPI, Prompt Engineering Advanced Techniques, Future Trends in Generative AI

1. Build a Streamlit/Gradio app integrating a text/image generator
2. Customize and deploy a fine-tuned LLM model for a specific domain
3. Mini Project: GenAI use case (e.g., Legal Assistant, AI Tutor, Art Generator)

Course Outcomes:

At the end of the course, students will be able to:

CO1: Explain the concepts of Generative AI, foundation models, and ethical issues related to generative systems.

CO2: Apply transformer-based architectures and large language models for text generation and conversational AI tasks.

CO3: Implement and evaluate generative models such as GANs and diffusion models for image and video generation.

CO4: Analyze and develop multimodal applications involving audio, code, and vision-language generation.

CO5: Design and deploy Generative AI applications using modern frameworks and tools for real-world domains.

Textbooks:

1. Denis Rothman, "Transformers for Natural Language Processing and Computer Vision", Third Edition, Packt Books, 2024

Reference Books:

1. David Foster, "Generative Deep Learning", O'Reilly Books, 2024. 2. Altaf Rehmani, "Generative AI for Everyone", BlueRose One, 2024.

Online Learning Resources

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

**Minor in Computer Science and Engineering (Data
Science)
(Applicable to CE, ECE, EEE, ME)**

Minor

23MDCSD101 PREDICTIVE ANALYTICS

L T P C
3 0 0 3

Pre-requisite: Basic Probability and Statistics, Python or R Programming, Machine Learning fundamentals

Course Description:

This course provides an overview of predictive analytics techniques and their real-world applications. Students will learn to prepare data, build and evaluate predictive models using algorithms like decision trees, logistic regression, and ensemble methods. The course also introduces text mining and model deployment through practical case studies.

Course Objectives:

The main objectives of the course is to

1. Introduce the foundational concepts and workflows of Predictive Analytics.
2. Illustrate real-world use cases and applications across different domains.
3. Demonstrate the process of building, evaluating, and deploying predictive models using various algorithms.
4. Explore ensemble techniques and text mining for advanced predictive tasks.
5. Familiarize students with performance metrics and model interpretation techniques.

UNIT I OVERVIEW OF PREDICTIVE ANALYTICS

10 hours

What Is Analytics? What Is Predictive Analytics? Business Intelligence Predictive Analytics vs. Business Intelligence, Predictive Analytics vs. Statistics, Predictive Analytics vs. Data Mining, Who Uses Predictive Analytics? , Challenges in Using Predictive Analytics, What Educational Background Is Needed to Become a Predictive Modeler?

Setting Up the Problem: Predictive Analytics Processing Steps: CRISP-DM, Business Understanding, Defining Data for Predictive Modelling, Defining the Target Variable, Defining Measures of Success for Predictive Models, Doing Predictive Modelling Out of Order, Case study- Recovering Lapsed Donors, Fraud Detection

UNIT II DATA UNDERSTANDING

9 hours

What the Data Looks Like, Single Variable Summaries, Data Visualization in One Dimension, Histograms, Multiple Variable Summaries, Data Visualization, Two or Higher Dimensions, The Value of Statistical Significance, Pulling It All Together into a Data Audit.

Data Preparation: Variable Cleaning, Feature Creation.

UNIT III ITEM SETS AND ASSOCIATION RULES

9 hours

Terminology, Parameter Settings, How the Data Is Organized, Measures of Interesting Rules, Deploying Association Rules, Problems with Association Rules, Building Classification Rules from Association Rules.

Descriptive Modelling: Data Preparation Issues with Descriptive Modelling, Principal Component Analysis, Clustering Algorithms.

Interpreting Descriptive Models: Standard Cluster Model Interpretation.

UNIT IV PREDICTIVE MODELLING

9 hours

Decision Trees, Logistic Regression, Neural Networks, K-Nearest Neighbour, Naïve Bayes, Regression Models, Linear Regression, Other Regression Algorithms.

Assessing Predictive Models: Batch Approach to Model Assessment, Assessing Regression Models.

UNIT V MODEL ENSEMBLES

9 hours

Motivation for Ensembles, Bagging, Boosting, Improvements to Bagging and Boosting, Model Ensembles and Occam's Razor, Interpreting Model Ensembles.

Text Mining: Motivation for Text Mining, A Predictive Modelling Approach to Text Mining, structured vs. Unstructured Data, Why Text Mining Is Hard, Data Preparation Steps, Text Mining Features, Modelling with Text Mining Features, Regular Expressions.

Model Deployment: General Deployment Considerations.

Case Studies: Survey Analysis Case Study, Help Desk Case Study.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Visualize and explore data to understand relationships and patterns.

CO2: Understand and explain how ensemble models improve prediction accuracy.

CO3: Organize and structure the predictive modelling pipeline and data preparation workflow.

CO4: Apply suitable predictive models like Decision Trees, Logistic Regression, and Neural Networks.

CO5: Evaluate model performance using appropriate statistical and business metric.

Textbooks:

1. Dean Abbott, Applied Predictive Analytics, Published by Jhon Wiley & Sons, Inc, 2014.

Reference Books:

1. Eric Siegel, Predictive Analytics, Published by Jhon Wiley & Sons, inc, 2013.
2. Data Analytics using Python Kindle Edition by Bharti Motwani, 202

Online Learning Resources

1. Predictive Analytics: Introduction to Business Forecasting | Udemy

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Minor

23MDCSD102 DATA VISUALIZATION

L	T	P	C
3	0	0	3

Pre-requisite: Exploratory Data Analysis.

Course Description:

This course introduces the principles and practices of data visualization to enable effective communication of data insights. Students will learn to abstract, map, and visualize data using statistical charts, multivariate techniques, and interactive dashboards. The course covers scalar, vector, temporal, and spatial data visualization, and includes hands-on experience with industry-standard tools like Tableau and Power BI. It emphasizes analytical thinking, visual storytelling, and dashboard design for domains such as finance, healthcare, and marketing.

Course Objectives:

The main objectives of the course is to

1. Introduce the fundamentals of data visualization and visual encoding techniques.
2. Explore various visualization techniques for structured, unstructured, and temporal data.
3. Understand multivariate and analytical visualizations using trees, maps, and networks.
4. Develop skills in creating effective visualizations using Tableau and Power BI.
5. Apply storytelling principles to design dashboards for domain-specific decision-making.

UNIT I INTRODUCTION TO DATA VISUALIZATION AND STATISTICAL CHARTS 9 hours

Overview of data visualization, Data Abstraction and Task Abstraction, Dimensions and Measures, Four levels for analytical validation, Statistical charts and their use cases: Bar chart, stacked bar chart, line chart, histogram, pie chart, box plot, scatter plot, frequency polygon, regression curves, Types of visualization tools

UNIT II VISUALIZATION TECHNIQUES AND DATA TYPES 9 hours

Scalar and point-based visualization techniques, Vector visualization techniques, Multidimensional visualization techniques, Cluster visualization: K-means and Hierarchical clustering, Visualizing: Time-series data, Text data
Spatial data.

UNIT III VISUAL ANALYTICS AND MULTIVARIATE DATA VISUALIZATION 9 hours

Networks and trees, Heat maps and treemaps, Manipulating view using map color and channels, Visual attributes for effective interpretation, Multivariate techniques: Geometric projection, Pixel-oriented and icon-based techniques, Scatterplot matrix, hyperbox, parallel coordinates, trellis displays

UNIT IV DATA VISUALIZATION WITH TABLEAU AND POWER BI 9 hours

Introduction to Visualization Tools, Tableau essentials: Marks, channels, arranging tables, facets, Power BI essentials: Workspace, Power Query, fields, charts, visuals, Design principles in visualization: choosing the right chart, layout, interactivity, and optimization.

UNIT V DASHBOARD DESIGN AND DATA STORYTELLING 9 hours

Designing interactive dashboards, Dashboard taxonomies and organizational functions, User interaction and protection, Common mistakes in dashboard design, Use case-based dashboard development for: Finance, Marketing, Healthcare, Insurance, Storytelling with Data and using Power BI Q&A for narrative insights

Dept. of Computer Science and Engineering (Data Science)

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain core concepts in data abstraction and statistical chart design.

CO2: Apply appropriate visualization techniques for scalar, vector, temporal, and text data.

CO3: Analyze and interpret multivariate data using visual analytics.

CO4: Develop interactive data visualizations using Tableau and Power BI.

CO5: Design and evaluate storytelling dashboards for real-world datasets.

Textbooks:

1. Cole Nussbaumer Knafllic, Storytelling with data, Wiley .
2. Ben Jones, Communicating Data with Tableau, O'Reilly

Reference Books:

1. A Julie Steele and Noah Iliinsky, Designing Data Visualizations: Representing Informational Relationships, O'Reilly.
2. Andy Kirk, Data Visualization: A Successful Design Process, PAKT.
3. Scott Murray, Interactive Data Visualization for Web, O'Reilly.

Online Learning Resources

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Minor

23MDCSD201 PREDICTIVE ANALYTICS AND VISUALIZATION LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite:

Course Description:

This laboratory course provides practical exposure to statistical analysis and modern data visualization techniques using SPSS, Python, Tableau, and Power BI. Students will gain hands-on experience with data preprocessing, inferential statistics, multivariate analysis, predictive modeling, and interactive dashboard development. The course emphasizes both quantitative data interpretation and effective storytelling through dashboards, enabling students to transform complex data into actionable insights.

Course Objectives:

The objectives of the course are to

1. Familiarize students with advanced statistical tools (SPSS) for data preprocessing, hypothesis testing, and multivariate analysis.
2. Perform statistical techniques such as factor analysis, regression, time series forecasting, and decision tree classification.
3. Develop skills in Python for visualizing structured and semi-structured data interactively.
4. Create professional dashboards using Tableau and Power BI for different business use cases.
5. Enable domain-specific storytelling through sales, healthcare, marketing, and time series dashboards.

PART 1

List of Experiments:

1. Introduction to SPSS, Sorting File, Split File, Compute File, Recode File and Select Cases
2. Chi- Square Test (Parametric and Non-Para
3. Exploratory Factor Analysis
4. Cluster Analysis
5. Logistic Regression
6. Discriminant Analysis
7. Confirmatory Factor Analysis
8. Conjoint Analysis
9. Time Series
10. MANOVA
11. Decision Tree Analysis

PART 2

List of Experiments:

1. Connecting to the data
2. Formatting and insertion of data

Dept. of Computer Science and Engineering (Data Science)

3. Creating worksheets, navigating the sheets, applying filters, aggregating the data
4. Organize the data into dashboards
5. Create story
6. Develop interactive plots in Python
7. Create Time series Data Visualization in Python
8. Visualization of Semi-Structured data
9. Create Sales Growth Dashboard – for the tracking of sales teams progress
10. Design Social media Dashboard – find how well your sponsored social activating are performing, monitor your PPC campaigns
11. Develop Healthcare Data Dashboard – Allows hospital administrators to manage and identify patient hazards from a single screen.

Course Outcomes:

After completion of the course, Students will be able to

- CO1: Perform statistical data analysis and hypothesis testing using SPSS.
- CO2: Apply multivariate techniques such as factor analysis, regression, and decision trees.
- CO3: Develop visualizations using Python for structured and semi-structured data.
- CO4: Build and publish dashboards using Tableau and Power BI for different business domains.
- CO5: Design effective visual stories that communicate insights from real-world datasets.

Mode of Evaluation: Continuous Internal Evaluation, Model Test and End Semester Examination

Minor

23MDCSD103 DATA ENGINEERING

L	T	P	C
3	0	0	3

Pre-requisite: Nil

Course Objectives:

The main objectives of the course is to

1. Explain basic concepts of Data Engineering
2. Discuss about Data Engineering Life Cycle
3. How to design Good Data Architecture

UNIT I INTRODUCTION TO DATA ENGINEERING

9 hours

Definition, Data Engineering Life Cycle, Evolution of Data Engineer, Data Engineering Versus Data Science, Data Engineering Skills and Activities, Data Maturity, Data Maturity Model, Skills of a Data Engineer, Business Responsibilities, Technical Responsibilities, Data Engineers and Other Technical Roles.

UNIT II DATA ENGINEERING LIFE CYCLE:

9 hours

Data Life Cycle Versus Data Engineering Life Cycle, Generation: Source System, Storage, Ingestion, Transformation, Serving Data.

Major undercurrents across the Data Engineering Life Cycle: Security, Data Management, DataOps, Data Architecture, Orchestration, Software Engineering.

UNIT III DESIGNING GOOD DATA ARCHITECTURE

9 hours

Enterprise Architecture, Data Architecture, Principles of Good Data Architecture, Major Architecture Concepts. Data Generation in Source Systems: Sources of Data, Files and Unstructured Data, APIs, Application Databases (OLTP), OLAP, Change Data Capture, Logs, Database Logs, CRUD, Source System Practical Details

UNIT IV

9 hours

Storage: Raw Ingredients of Data Storage, Data Storage Systems, Data Engineering Storage Abstractions, Data warehouse, Data Lake, Data Lakehouse. Ingestion: Data Ingestion, Key Engineering considerations for the Ingestion Phase, Batch Ingestion Considerations, Message and Stream Ingestion Considerations, Ways to Ingest Data

UNIT V

9 hours

Queries, Modeling and Transformation: Queries, Life of a Query, Query Optimizer, Queries on Streaming Data, Data Modelling, Modeling Streaming Data, Transformations, Streaming Transformations and Processing. Dept. of Computer Science and Engineering (Data Science)
Serving Data for Analytics, Machine Learning and Reverse ETL: General Considerations for serving Data, Business Analytics, Operational Analytics, Embedded Analytics, Ways to serve data for analytics and ML, Reverse ETL

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1: Understand data engineering fundamentals, differentiate from data science, and identify key data engineer roles and responsibilities
- CO2: Grasp the data engineering lifecycle, including security, management, and operational aspects.
- CO3: Design effective data architectures based on data sources, models, and architectural principles.
- CO4: Select optimal storage and ingestion methods for efficient data pipelines..
- CO5: Master querying, modeling, and transformation techniques to deliver valuable data products.

Textbooks:

1. Joe Reis, Matt Housley, Fundamentals of Data Engineering, O'Reilly Media, Inc., June 2022, ISBN: 9781098108304

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Minor

23MDCSD104 NATURAL LANGUAGE PROCESSING

L	T	P	C
3	0	0	3

Pre-requisite: Python Programming, Machine Learning Basics

Course Objectives:

The main objectives of the course is to

1. Explain and apply fundamental algorithms and techniques in the area of natural language processing (NLP)
2. Discuss approaches to syntax and semantics in NLP.
3. Examine current methods for statistical approaches to machine translation.
4. Teach machine learning techniques used in NLP.

UNIT I INTRODUCTION TO NATURAL LANGUAGE

9 hours

The Study of Language, Applications of NLP, Evaluating Language Understanding Systems, Different Levels of Language Analysis, Representations and Understanding, Organization of Natural language Understanding Systems, Linguistic Background: An outline of English Syntax.

UNIT II GRAMMARS AND PARSING

9 hours

Grammars and Parsing- Top-Down and Bottom-Up Parsers, Transition Network Grammars, Feature Systems and Augmented Grammars, Morphological Analysis and the Lexicon, Parsing with Features, Augmented Transition Networks, Bayes Rule, Shannon game, Entropy and Cross Entropy.

UNIT III GRAMMARS FOR NATURAL LANGUAGE

9 hours

Grammars for Natural Language, Movement Phenomenon in Language, Handling questions in Context Free Grammars, Hold Mechanisms in ATNs, Gap Threading, Human Preferences in Parsing, Shift Reduce Parsers, Deterministic Parsers.

UNIT IV SEMANTIC INTERPRETATION

9 hours

Semantic & Logical form, Word senses & ambiguity, The basic logical form language, Encoding ambiguity in the logical Form, Verbs & States in logical form, Thematic roles, Speech acts & embedded sentences, Defining semantics structure model theory. Language Modelling Introduction, n-Gram Models, Language model Evaluation, Parameter Estimation, Language Model Adaption, Types of Language Models, Language-Specific Modelling Problems, Multilingual and Cross lingual Language Modelling.

UNIT V MACHINE TRANSLATION

9 hours

Survey: Introduction, Problems of Machine Translation, Is Machine Translation Possible, Brief History, Possible Approaches, Current Status. Anusaraka or Language Accessor: Background, Cutting the Gordian Knot, The Problem, Structure of Anusaraka System, User Interface, Linguistic Area, Giving up Agreement in Anusarsaka Output, Language Bridges.

Multilingual Information Retrieval: Introduction, Document Pre-processing, Monolingual Information Retrieval, CLIR, MLIR, Evaluation in Information Retrieval, Tools, Software and Resources.

Multilingual Automatic Summarization Introduction, Approaches to Summarization, Evaluation, How to Build a Summarizer, Competitions and Datasets.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1: Understand the various NLP Applications and Organization of Natural language, able to learn and implement realistic applications using Python.
- CO2: Apply the various Parsing techniques, Bayes Rule, Shannon game, Entropy and Cross Entropy.
- CO3: Understand the fundamentals of CFG and parsers and mechanisms in ATN's.
- CO4: Apply Semantic Interpretation and Language Modelling.
- CO5: Apply the concept of Machine Translation and multilingual Information Retrieval systems and Automatic Summarization.

Textbooks:

1. James Allen, Natural Language Understanding, 2nd Edition, 2003, Pearson Education.
2. Multilingual Natural Language Processing Applications: From Theory To Practice-Daniel M.Bikel and ImedZitouni, Pearson Publications.
3. Natural Language Processing, Apaninian perspective, AksharBharathi, Vineetchaitanya, Prentice-Hall of India.

Reference Books:

1. Charniack, Eugene, Statistical Language Learning, MIT Press, 1993.
2. Jurafsky, Dan and Martin, James, Speech and Language Processing, 2nd Edition, Prentice Hall, 2008.
3. Manning, Christopher and Henrich, Schutze, Foundations of Statistical Natural Language Processing, MIT Press, 1999.

Mode of Evaluation: Assignments, Mid Term Tests and End Semester Examination.

Minor

23MDCSD202 DATA ENGINEERING LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite: Data Structure & Algorithms, Computer Architecture, Operating System, Database Management Systems

Course Objectives:

1. Optimize business decisions and create competitive advantage with Big Data analytics
2. Imparting the architectural concepts of Hadoop and introducing map reduce paradigm
3. Introducing Java concepts required for developing map reduce programs
4. Derive business benefit from unstructured data
5. Introduce programming tools PIG & HIVE in Hadoop ecosystem.
6. Developing Big Data applications for streaming data using Apache Spark

List of Programs:

1. (i) Perform Setting Up And Installing Hadoop In Its Two Operating Modes: Pseudo Distributed, And Fully Distributed.
(ii) Use Web Based Tools To Monitor Your Hadoop Setup.
2. (i) Implement the following file management tasks in Hadoop:
 1. Adding files and directories
 2. Retrieving files
 3. Deleting filesii) Benchmark and stress test an Apache Hadoop cluster
3. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
 1. Find the number of occurrence of each word appearing in the input file(s)
 2. Performing a MapReduce Job for word search count (look for specific keywords in a file)
4. Stop word elimination problem:
 - a. Input:
 - i. A large textual file containing one sentence per line
 - ii. A small file containing a set of stop words (One stop word per line)
 - b. Output:
 - i. A textual file containing the same sentences of the large input file without the words appearing in the small file.
5. Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structured and record-oriented. Data available at: <https://github.com/tomwhite/hadoop-book/tree/master/input/ncdc/all>.
 1. Find average, max and min temperature for each year in NCDc data set?
 2. Filter the readings of a set based on value of the measurement, Output the line of input files associated with a temperature value greater than 30.0 and store it in a separate file.

6. Purchases.txt Dataset

- a. Instead of breaking the sales down by store, give us a sales breakdown by product category across all of our stores
 - i. What is the value of total sales for the following categories?
 1. Toys
 2. Consumer Electronics
- b. Find the monetary value for the highest individual sale for each separate store

7. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.

8. Write a Pig Latin scripts for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg)

9. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes

10. Install, Deploy & configure Apache Spark Cluster. Run apache spark applications using Scala.

Course Outcomes:

Upon successful completion of the course, students will be able to

CO1: Preparing for data summarization, query, and analysis.

CO2:Applying data modelling techniques to large data sets

CO3: Creating applications for Big Data analytics

CO4: Building a complete business data analytic solution

Textbooks:

1. Arshdeep Bahga, Vijay Madiseti, “Big Data Science & Analytics: A Hands-On Approach “,VPT, 2016

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Minor

23MDCSD105 BIG DATA ANALYTICS

L	T	P	C
3	0	0	3

Pre-requisite: Database Management Systems (DBMS)

Course Description:

This course introduces students to the foundational concepts and technologies of Big Data and its analytics. It covers the evolution, characteristics, and challenges of Big Data, along with tools and frameworks like Hadoop, MapReduce, MongoDB, Hive, Pig, and Spark. The course emphasizes the comparison between traditional RDBMS and Big Data frameworks and equips students with the knowledge required to analyze structured, semi-structured, and unstructured data. Students will also learn about NoSQL databases and advanced analytics techniques such as text, web, and link analytics, preparing them for real-world data-intensive problem-solving.

Course Objectives:

The main objective of the course is to

1. Understand the concepts, characteristics, and importance of Big Data and analytics.
2. Explore MapReduce programming and manage data using the Hadoop ecosystem.
3. Familiarize students with data storage, retrieval, and operations using MongoDB.
4. Provide hands-on experience in developing data processing workflows using Hive and Pig.
5. Analyze large-scale data using Spark, along with text, web, and link analytics techniques.

UNIT I INTRODUCTION TO BIG DATA ANALYTICS

9 hours

Classification of data, Characteristics, Evolution and definition of Big data, What is Big data, Why Big data, Traditional Business Intelligence Vs Big Data, Typical data warehouse and Hadoop environment.

Big Data Analytics: What is Big data Analytics, Classification of Analytics, Importance of Big Data Analytics, Technologies used in Big data Environments, Few Top Analytical Tools , NoSQL, Hadoop.

UNIT II HADOOP AND MAP REDUCE FRAMEWORK

9 hours

Introduction to Hadoop: Introducing hadoop, Why hadoop, Why not RDBMS, RDBMS Vs Hadoop, History of Hadoop, Hadoop overview, Use case of Hadoop, HDFS (Hadoop Distributed File System), Processing data with Hadoop, Managing resources and applications with Hadoop YARN (Yet Another Resource Negotiator).

Introduction to Map Reduce Programming: Introduction, Mapper, Reducer, Combiner, Partitioner, Searching, Sorting, Compression.

UNIT III INTRODUCTION TO MONGODB

9 hours

Introduction to MongoDB: What is MongoDB, Why MongoDB, Terms used in RDBMS and MongoDB, Data Types in MongoDB, MongoDB Query Language.

UNIT IV DATA PROCESSING WITH HIVE AND PIG

9 hours

Introduction to Hive: What is Hive, Hive Architecture, Hive data types, Hive file formats, Hive Query Language (HQL), RC File implementation, User Defined Function (UDF).

Introduction to Pig: What is Pig, Anatomy of Pig, Pig on Hadoop, Pig Philosophy, Use case for Pig, Pig Latin Overview, Data types in Pig, Running Pig, Execution Modes of Pig, HDFS Commands, Relational Operators, Eval Function, Complex Data Types, Piggy Bank, User Defined Function, Pig Vs Hive.

UNIT V SPARK AND ADVANCED BIG DATA ANALYTICS

13 hours

Spark and Big Data Analytics: Spark, Introduction to Data Analysis with Spark.

Text, Web Content and Link Analytics: Introduction, Text Mining, Web Mining, Web Content and Usage Analytics, Page Rank, Structure of Web and Analyzing a Web Graph.

Course Outcomes:

After completing the course, students will be able to:

CO1: Explain the characteristics and importance of Big Data and its analytical value.

CO2: Implement MapReduce programs and manage datasets using the Hadoop ecosystem.

CO3: Perform data storage and retrieval operations using MongoDB.

CO4: Design and execute data workflows using Hive and Pig for analysis.

CO5: Analyze large datasets using Spark and apply text, web, and link analytics.

Textbooks:

1. Seema Acharya and Subhashini Chellappan “Big data and Analytics” Wiley India Publishers, 2nd Edition, 2019.
2. Rajkamal and Preeti Saxena, “Big Data Analytics, Introduction to Hadoop, Spark and Machine Learning”, McGraw Hill Publication, 2019.

CSE (Networks))

Minors

23MDINS101 INTRODUCTION TO QUANTUM COMPUTING

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course introduces the basics of quantum mechanics as applied to computing. Students learn about qubits, quantum gates, circuits, and key algorithms like Grover's and Shor's. Concepts such as superposition, entanglement, and quantum communication are explored. Practical exposure is given through programming on platforms like IBM Qiskit.

Course Objectives:

1. Understand quantum mechanics principles in computing.
2. Explore qubits, quantum gates, and circuits.
3. Analyze the advantages of quantum algorithms.
4. Study entanglement, superposition, and interference.
5. Investigate real-world applications and platforms.

UNIT I QUBITS AND QUANTUM FOUNDATIONS

9 hours

Classical Bits vs Qubits, Postulates of Quantum Mechanics, Superposition and Probability Amplitudes, Dirac Notation (Bra-Ket), Bloch Sphere Representation, Measurement in Quantum Systems, Quantum State Collapse.

UNIT II QUANTUM GATES AND CIRCUITS

9 hours

Quantum Logic Gates: Pauli-X, Y, Z; Hadamard (H); Phase (S, T), Controlled Gates: CNOT, Toffoli, Unitary and Reversible Operations, Quantum Circuit Representation, Building Basic Quantum Circuits, Quantum Parallelism and Interference, No-Cloning Theorem and Quantum Gate Simulation.

UNIT III QUANTUM ALGORITHMS

9 hours

Need for Quantum Algorithms, Deutsch and Deutsch-Jozsa Algorithm, Grover's Search Algorithm (Quadratic Speed-up), Shor's Factoring Algorithm (Exponential Speed-up), Simon's Algorithm (Overview), Complexity Comparison: Classical vs Quantum.

UNIT IV ENTANGLEMENT AND QUANTUM COMMUNICATION

9 hours

Quantum Entanglement and Bell States, Quantum Teleportation Protocol, Superdense Coding, Quantum Key Distribution: BB84, E91 Protocols, Decoherence and Quantum Noise, Quantum Error Correction Codes (Bit Flip, Phase Flip, Shor Code).

UNIT V QUANTUM PLATFORMS AND APPLICATIONS

9 hours

Overview of Quantum Programming Platforms: IBM Qiskit, Microsoft Q#, Google Cirq, Quantum Circuit Simulation using Qiskit, Executing Code on Real Quantum Hardware (IBM Q). Quantum Applications in: Cryptography, Machine Learning, Optimization, Chemistry, Building and Testing a Sample Quantum Program.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Explain concepts of quantum mechanics

CO2: Illustrate quantum gates/circuits

CO3: Analyze algorithms (e.g., Shor, Grover)

CO4: Evaluate communication protocols

CO5: Develop quantum programs on IBM Q

Textbooks:

Minors

23MDINS102 MATHEMATICAL FOUNDATIONS FOR QUANTUM COMPUTING

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course covers the mathematical tools required for quantum computing. It focuses on linear algebra, complex vector spaces, eigenvalues, and probability theory in quantum systems. Students gain skills to model quantum states and analyze measurements. These foundations prepare them for understanding quantum algorithms.

Course Objectives:

1. Cover linear algebra & complex vector spaces.
2. Model quantum states mathematically.
3. Apply probability theory to measurements.
4. Study eigenvalues and transformations.
5. Prepare for algorithm analysis with rigor.

UNIT I FOUNDATIONS OF COMPLEX VECTOR SPACES

9 hours

Complex Numbers: Polar form, Euler's formula, Vectors in $\mathbb{C}^n$, Inner Product Spaces, Dirac Notation (Bra-Ket), Hilbert Space: Definitions and Properties, Orthogonality and Completeness, Norms, Metrics, and Distance in Complex Spaces.

UNIT II MATRIX ALGEBRA AND OPERATORS

9 hours

Matrix Multiplication and Linear Transformations, Special Matrices: Identity, Diagonal, Unitary, Tensor Products of Matrices and Vectors, Kronecker Product Applications, Unitary and Invertible Operators, Quantum Gates as Linear Operators.

UNIT III EIGEN CONCEPTS AND QUANTUM OBSERVABLES

9 hours

Eigenvalues and Eigenvectors, Hermitian Operators and Spectral Theorem, Quantum Observables and Expectation Values, Commutators and Compatibility, Measurement Operators and Matrix Diagonalization, Applications in Quantum Gate Analysis.

UNIT IV QUANTUM MEASUREMENT & PROBABILITY

9 hours

Basics of Probability Theory in Quantum Systems, Born's Rule and Measurement Probabilities, Projection Postulate, Density Matrix Formalism, Mixed States and Pure States, Trace, Partial Trace, and Operator Sums.

UNIT V ADVANCED STRUCTURES IN QUANTUM MATH

9 hours

Group Theory Basics: Symmetry, Permutations, Pauli Group, Clifford Group, and their roles, Fourier Transform in Quantum Context, Gram-Schmidt Orthogonalization, Lie Groups and Lie Algebras, Use of Lie Algebra in Hamiltonian Formulation.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1:** Explain concepts of quantum mechanics
CO2: Illustrate quantum gates/circuits
CO3: Analyze algorithms (e.g., Shor, Grover)
CO4: Evaluate communication protocols
CO5: Develop quantum programs on IBM Q

Textbooks:

Minors

23MDINS201 QUANTUM PROGRAMMING AND SIMULATION LABORATORY

L	T	P	C
0	0	3	1.5

Prerequisites: None

Course Description:

This lab provides hands-on experience with quantum algorithms. Students implement and simulate algorithms such as Deutsch-Jozsa, Grover's search, Shor's algorithm, and teleportation. Both simulation and real hardware platforms are used. The focus is on practical understanding and experimentation.

Course Objectives:

1. To train students in programming quantum circuits using Qiskit, Q#, and related tools.
2. To explore advanced quantum simulations for teleportation, QFT, and hybrid models.
3. To develop practical skills in debugging and optimizing quantum programs.
4. To expose learners to both simulated environments and real quantum devices.
5. To motivate students through project-based learning in quantum applications.

List of Experiments:

1. State Vector Simulation (Qiskit)
2. Bell State Implementation
3. Deutsch-Jozsa Circuit
4. Grover's Search in Qiskit
5. QFT Circuit in Python
6. Shor Algorithm Simulation
7. Quantum Teleportation in Code
8. VQE (Hybrid Circuit)
9. QAOA Simulation
10. Quantum Random Number Generator
11. Comparison: Real vs Simulated Runs
12. Mini-Project: Quantum Password Cracker

Course Outcomes:

- CO1:** Ability to program and simulate quantum algorithms effectively.
- CO2:** Proficiency in using platforms like IBM Qiskit and Microsoft Q# for experimentation.
- CO3:** Understanding of differences between simulated and real hardware execution.
- CO4:** Skills to implement hybrid quantum-classical solutions such as VQE and QAOA.
- CO5:** Experience in developing a mini-project showcasing applied quantum computing.

Minors

23MDINS103 QUANTUM ALGORITHMS

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course explores the design and analysis of algorithms in the quantum domain. Students study key algorithms like Deutsch, Grover's search, and Shor's factoring, along with Fourier-based methods. The course highlights the speed-up of quantum methods over classical ones. Implementation on real frameworks like Qiskit is emphasized.

Course Objectives:

1. Understand algorithm design principles in the quantum domain.
2. Use mathematical tools such as linear algebra and probability in algorithm analysis.
3. Implement quantum algorithms and compare them with classical equivalents.
4. Study key applications in cryptography, database search, and optimization.

UNIT I MATHEMATICAL TOOLS FOR QUANTUM ALGORITHMS 9 hours

Review of Complex Numbers & Linear Algebra for Quantum Computing, Inner Product Spaces, Hilbert Spaces, Dirac Notation and Interpretations, Quantum State Vectors and Superposition, Overview of Quantum Gates and Operators, Building Block Concepts for Algorithmic Design.

UNIT II SEARCH AND ORACLE-BASED ALGORITHMS 9 hours

Deutsch's Algorithm: Problem and Solution Strategy, **Simon's Algorithm:** Period-finding and Speed-up Over Classical, **Grover's Search Algorithm:** Amplitude Amplification, Oracle Construction in Grover's Algorithm, Circuit Analysis and Complexity Comparison, Limitations and Applications in Database Search.

UNIT III EIGEN CONCEPTS AND QUANTUM OBSERVABLES 9 hours

Eigenvalues and Eigenvectors, Hermitian Operators and Spectral Theorem, Quantum Observables and Expectation Values, Commutators and Compatibility, Measurement Operators and Matrix Diagonalization, Applications in Quantum Gate Analysis.

UNIT IV FOURIER-BASED & CRYPTOGRAPHIC ALGORITHMS 9 hours

Quantum Fourier Transform (QFT): Theory and Circuit, **Phase Estimation Algorithm:** Foundations and Usage, **Shor's Algorithm:** Integer Factorization and Discrete Logarithms, Modular Arithmetic and Period Finding, Cryptographic Implications of Quantum Algorithms, Efficiency Analysis vs Classical RSA Factorization.

UNIT V ADVANCED & HYBRID QUANTUM ALGORITHMS 9 hours

Variational Quantum Eigensolver (VQE), Quantum Approximate Optimization Algorithm (QAOA), Quantum Machine Learning (QML): Classification & Clustering, Hybrid Quantum-Classical Models, IBM Qiskit&Cirq for Implementation, Building Custom Quantum Algorithms for NISQ Devices.

Course Outcomes:

- CO1:** Understand quantum algorithm building blocks
- CO2:** Analyze well-known quantum algorithms
- CO3:** Apply quantum algorithms to application domains
- CO4:** Evaluate efficiency and complexity of algorithms
- CO5:** Create and simulate quantum algorithms

Textbooks:

Minors

23MDINS104 QUANTUM INFORMATION AND COMMUNICATION

L T P C
3 0 0 3

Pre-requisite:

Course Description:

This course introduces quantum information theory and its role in communication. Topics include entropy, fidelity, quantum teleportation, and quantum key distribution. Students analyze security protocols and the challenges of building quantum networks. Practical tools like Qiskit and NetSquid are used for simulation.

Course Objectives:

1. Understand the principles of quantum information theory.
2. Explore quantum entropy, fidelity, and mutual information.
3. Study quantum communication protocols and networks.
4. Analyze quantum key distribution and cryptographic security.
5. Implement protocols like teleportation and superdense coding.

UNIT I QUANTUM INFORMATION BASICS

9 hours

Classical vs Quantum Information, Density matrices and mixed states, Quantum entropy and Shannon entropy, Von Neumann entropy, Quantum data compression.

UNIT II QUANTUM COMMUNICATION PROTOCOLS

9 hours

Quantum teleportation, Superdense coding, Quantum repeaters and communication channels, No-cloning theorem, Quantum channel capacity.

UNIT III FIDELITY, DISTANCE & INFORMATION THEORY

9 hours

Fidelity and trace distance, Quantum mutual information, Holevo bound, Information trade-offs in communication, Channel noise and error modeling.

UNIT IV QUANTUM CRYPTOGRAPHY

9 hours

Principles of quantum cryptography, BB84 and B92 key distribution protocols, Eavesdropping and security analysis, Quantum bit commitment, Post-quantum cryptography relevance.

UNIT V APPLICATIONS & TOOLS

9 hours

Quantum internet: architecture and challenges, Networked quantum systems, Simulation using Qiskit, NetSquid, QuTiP, IBM Q Network and cloud-based setups, Practical implementation of QKD in simulation.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1: Understand quantum information concepts
- CO2: Apply quantum communication protocols
- CO3: Analyze fidelity, entropy, and data transfer limits
- CO4: Evaluate quantum cryptographic techniques
- CO5: Create and simulate quantum communication models

Textbooks:

23MDINS202 QUANTUM ALGORITHMS LABORATORY

L	T	P	C
0	0	3	1.5

Prerequisites: None

Course Descriptions: This lab provides hands-on experience with quantum algorithms. Students implement and simulate algorithms such as Deutsch-Jozsa, Grover's search, Shor's algorithm, and teleportation. Both simulation and real hardware platforms are used. The focus is on practical understanding and experimentation.

Course Objectives:

1. To provide hands-on practice in implementing quantum algorithms.
2. To understand the working of algorithms like Grover's, Shor's, and Deutsch-Jozsa.
3. To strengthen the link between theoretical knowledge and practical applications.
4. To familiarize students with quantum simulators and real hardware platforms.
5. To encourage problem-solving through quantum circuit design.

List of Experiments

1. Deutsch Algorithm
2. Deutsch-Jozsa
3. Grover's Algorithm
4. QFT Visualization
5. Shor's Algorithm
6. QRNG Implementation
7. Bell State Entanglement
8. Bernstein-Vazirani Algorithm
9. Quantum Teleportation
10. Phase Estimation
11. Circuit Simulation
12. Mini-Project: RSA Key Breaking

Course Outcomes:

- CO1:** Ability to design and implement basic quantum algorithms.
- CO2:** Skill to simulate and test quantum circuits using software tools.
- CO3:** Competence in analyzing the performance of algorithms on quantum platforms.
- CO4:** Capability to compare classical vs quantum approaches for given problems.
- CO5:** Practical experience in applying algorithms to real-world inspired use cases.

Minors

23MDINS105 QUANTUM MACHINE LEARNING (QML)

L T P C
3 0 0 3

Pre-requisite: Nil

Course Description:

This course blends quantum computing with machine learning. Students learn quantum data encoding, supervised and unsupervised quantum algorithms, and hybrid models. Case studies such as quantum-enhanced fraud detection and NLP are included. Practical implementation is done using Qiskit and PennyLane.

Course Objectives:

1. Introduce the fundamentals of quantum-enhanced machine learning.
2. Understand quantum data encoding and kernel methods.
3. Explore quantum algorithms for supervised and unsupervised learning.
4. Analyze hybrid quantum-classical architectures.
5. Implement QML models using frameworks like Qiskit and PennyLane.

UNIT I INTRODUCTION TO QML

9 hours

Need for QML: Why quantum for ML?, Classical vs quantum machine learning, Quantum states as information carriers, Data encoding: amplitude, angle, basis encoding, Introduction to quantum feature space.

UNIT II QML ALGORITHMS – SUPERVISED LEARNING

9 hours

Quantum classifiers (quantum SVMs, qNN), Quantum perceptron, Variational quantum classifiers (VQC), Quantum kernels, Cost functions in quantum models.

UNIT III QML ALGORITHMS – UNSUPERVISED LEARNING

9 hours

Quantum k-means and clustering, Quantum PCA, Quantum generative models (QGANs), Dimensionality reduction and similarity metrics, Performance analysis and limitations.

UNIT IV HYBRID MODELS & OPTIMIZATION

9 hours

Variational Quantum Circuits (VQCs), Hybrid quantum-classical training loops, Barren plateaus and optimization issues, Quantum gradient descent and parameter shift rule, Comparative study of classical and QML models.

UNIT V QML TOOLS AND CASE STUDIES

9 hours

Implementing QML with Qiskit Machine Learning, PennyLane and TensorFlow Quantum integration, Case studies: quantum-enhanced fraud detection, NLP, Quantum datasets and benchmark models, Project: design a small QML application.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1: Understand foundations of quantum machine learning
- CO2: Apply QML algorithms to datasets
- CO3: Analyze quantum kernels, data encoding, and models
- CO4: Evaluate hybrid quantum-classical models
- CO5: Create and simulate QML models using frameworks

23MDINS106 FOUNDATIONS OF QUANTUM TECHNOLOGIES

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course introduces the fundamental principles of quantum mechanics and their application in quantum information science. It covers the mathematical foundations, including linear algebra and complex vector spaces, to describe quantum states and operators. Key topics include superposition, measurement, entanglement, and quantum dynamics, along with the probabilistic nature of quantum systems. The course also explores practical aspects of quantum technologies, such as qubits, quantum logic gates, decoherence, and basic quantum circuit modeling using simulation tools. By the end, students will gain both theoretical understanding and foundational skills for working with quantum systems and emerging quantum technologies.

Course Objectives:

1. Introduce the fundamental quantum mechanics concepts essential for quantum technologies.
2. Build strong mathematical foundations for quantum state modeling.
3. Develop understanding of superposition, entanglement, and measurement.
4. Explain the physical principles behind quantum devices.
5. Prepare students for advanced studies in quantum computation, communication, sensing, and materials.

UNIT I: QUANTUM MECHANICS FOUNDATIONS

9 hours

Classical vs Quantum systems, Wave-particle duality, Schrödinger equation (Time-dependent and Time-independent), Postulates of Quantum Mechanics, Quantum states and state vectors, Complex Hilbert spaces, Dirac notation (Bra-Ket notation), Probabilistic interpretation of quantum mechanics.

UNIT II: LINEAR ALGEBRA FOR QUANTUM SYSTEMS

9 hours

Complex vector spaces and inner products, Orthonormal basis and orthogonality, Linear operators and transformations, Unitary operators and Hermitian operators, Tensor products for multi-qubit systems, Eigenvalues and Eigenvectors, Commutators and anti-commutators, Representing quantum states with matrices.

UNIT III: SUPERPOSITION, MEASUREMENT, AND ENTANGLEMENT **9 hours**

Principle of superposition, Measurement postulate, Probability amplitudes and Born rule, State collapse upon measurement, Entanglement and Bell states, EPR paradox and non-locality, Density matrices and mixed states, Quantum decoherence.

UNIT IV: OPERATORS AND QUANTUM DYNAMICS **9 hours**

Time evolution operators, Hamiltonian and energy eigenstates, Quantum harmonic oscillator (brief overview), Unitary evolution and Schrödinger equation solutions, Quantum tunnelling, Adiabatic theorem basics, Operator algebra in quantum systems, Expectation values and observables.

UNIT V: QUANTUM TECHNOLOGIES BUILDING BLOCKS **9 hours**

Basic qubit systems (spin-1/2, photon polarization, superconducting qubits), Two-level quantum systems modelling, Bloch sphere representation, Quantum logic gates fundamentals, Multi-qubit systems: controlled operations, Introduction to decoherence and quantum error correction, Quantum technologies: hardware platforms overview, Basic quantum circuit modeling using simulators (Qiskit or Q# demo examples).

Course Outcomes:

On successful completion of the course, the student will be able to:

CO1: Understand postulates of quantum mechanics for quantum technologies

CO2: Apply linear algebra and Dirac notation to quantum state analysis

CO3: Analyze superposition, entanglement, and measurement processes

CO4: Evaluate quantum systems through operators and probability amplitudes

CO5: Create mathematical models for simple quantum systems

Textbooks:

23MDINS107 SOLID STATE PHYSICS FOR QUANTUM TECHNOLOGIES

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course provides a comprehensive understanding of the fundamental materials science and physics concepts essential for quantum technologies. It covers crystal structures, electronic properties, and semiconductor physics relevant to quantum devices, including quantum wells, dots, and superconductors. Students will explore quantum confinement in low-dimensional systems, lattice vibrations, phonon interactions, and their impact on qubit performance. The course also examines advanced materials for quantum technologies, such as topological insulators, NV centers, and photonic crystals, along with fabrication challenges and design strategies for achieving long coherence times.

Course Objectives:

1. Understand fundamental solid-state physics principles relevant to quantum technologies.
2. Study the electronic properties of materials used in quantum hardware.
3. Explore quantum confinement and nanostructures for qubit implementation.
4. Analyze crystal structures, band theory, and defects influencing quantum devices.
5. Build foundations for material selection and engineering for quantum systems.

UNIT I: CRYSTAL STRUCTURE AND ELECTRONIC PROPERTIES

9 hours

Crystal lattices and unit cells, Bravais lattices, Miller indices, Reciprocal lattice and Brillouin zones, Atomic bonding in solids (covalent, ionic, metallic, van der Waals), X-ray diffraction and crystal structure determination, Electronic structure of solids, Free electron theory, Energy bands: metals, semiconductors, and insulators.

UNIT II: SEMICONDUCTOR PHYSICS FOR QUANTUM DEVICES

9 hours

Intrinsic and extrinsic semiconductors, Charge carriers: electrons, holes, effective mass, Carrier concentration and Fermi level, p-n junctions and semiconductor heterostructures, Quantum wells and quantum dots as qubits, Superconductors and Josephson junctions, Semiconductor fabrication basics, Materials for quantum hardware: Si, GaAs, diamond NV centers, topological insulators.

UNIT III: QUANTUM CONFINEMENT AND LOW-DIMENSIONAL SYSTEMS 9 hours

Quantum size effects: nanowires, nanotubes, 2D materials, Quantum dots: discrete energy levels, Quantum Hall effect, Topological quantum materials, Spintronics and spin qubits, Quantum confinement in superconducting qubits, Heterostructure-based quantum devices, Valleytronics and emerging 2D materials (MoS₂, graphene).

UNIT IV: LATTICE VIBRATIONS AND PHONON INTERACTIONS 9 hours

Lattice vibrations and phonons, Heat capacity and thermal conductivity of solids, Electron-phonon interaction, Decoherence in solid-state qubits due to phonons, Magnetic impurities and Kondo effect, Defects and dislocations in crystals, Dopants and quantum impurity systems, Nuclear spin environments and coherence times.

UNIT V: MATERIALS FOR QUANTUM TECHNOLOGIES 9 hours

Material engineering for superconducting qubits, NV centers in diamond for quantum sensing, Topological materials for robust qubits, Photonic crystal materials for optical qubits, Hybrid quantum systems: coupling different materials, Fabrication challenges and material purity, Advances in quantum materials research, Designing material systems for long coherence time.

Course Outcomes:

On successful completion of the course, the student will be able to:

CO1: Understand crystal structures and band theory

CO2: Apply knowledge of semiconductors, insulators, and conductors in quantum materials

CO3: Analyze quantum confinement effects and low-dimensional systems

CO4: Evaluate defects, phonons, and interactions in solid-state systems

CO5: Create models for quantum device material systems

Textbooks:

1. Charles Kittel – Introduction to Solid State Physics
2. Michael A. Nielsen & Isaac Chuang – Quantum Computation and Quantum Information

23MDINS108 INTRODUCTION TO QUANTUM COMMUNICATION

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course provides a comprehensive introduction to quantum communication principles, technologies, and protocols. It covers the fundamental differences between classical and quantum communication, including quantum entanglement, qubits, and quantum information security. Key topics include Quantum Key Distribution (QKD) protocols, quantum teleportation, and entanglement distribution techniques for secure and long-distance communication. Students will explore quantum networks, quantum internet architecture, and advanced quantum communication applications such as quantum secure direct communication, quantum secret sharing, and post-quantum cryptography. The course also discusses practical implementation challenges, hybrid quantum-classical models, and emerging trends shaping the future of quantum communication.

Course Objectives:

1. Introduce fundamental principles of quantum communication.
2. Study quantum key distribution (QKD) protocols.
3. Analyze quantum teleportation, entanglement swapping, and quantum repeaters.
4. Evaluate quantum security principles and their advantages.
5. Prepare students for designing secure communication protocols for future quantum networks.

UNIT I: INTRODUCTION TO QUANTUM COMMUNICATION

9 hours

Classical communication vs quantum communication, No-cloning theorem and quantum information security, Qubits and qubit transmission channels, Quantum entanglement fundamentals, EPR paradox and Bell's inequalities, Quantum states and measurement, Role of superposition and measurement collapse, Overview of quantum internet and its architecture.

UNIT II: QUANTUM KEY DISTRIBUTION (QKD) PROTOCOLS

9 hours

Classical cryptography limitations, BB84 protocol, B92 protocol, E91 entanglement-based protocol, Decoy-state QKD, Device-independent QKD, Practical implementation challenges in QKD, Experimental QKD systems (fiber, free-space, satellites).

UNIT III: QUANTUM TELEPORTATION AND ENTANGLEMENT DISTRIBUTION

9 hours

Quantum teleportation protocol, Entanglement swapping, Quantum repeaters for long-distance communication, Error sources in quantum teleportation, Resource requirements for teleportation, Entanglement purification techniques, Bell state measurements, Applications of teleportation in distributed quantum computing.

UNIT IV: QUANTUM NETWORKS AND QUANTUM INTERNET

9 hours

Architecture of quantum networks, Quantum routers and switching, Quantum memories and storage nodes, Distributed entanglement generation and management, Multiparty quantum communication Blind quantum computing, Performance metrics for quantum networks (fidelity, key rate), Challenges in large-scale quantum network deployment.

UNIT V: ADVANCED QUANTUM COMMUNICATION PROTOCOLS AND APPLICATIONS

9 hours

Quantum secure direct communication, Quantum digital signatures, Position-based quantum cryptography, Quantum secret sharing, Post-quantum cryptography overview, Quantum cloud communication protocols, Building hybrid quantum-classical communication models, Future directions in quantum communication technology.

Course Outcomes:

On successful completion of the course, the student will be able to:

CO1: Understand quantum communication concepts

CO2: Apply quantum entanglement to communication protocols

CO3: Analyze QKD protocols and teleportation mechanisms

CO4: Evaluate security of quantum communication

CO5: Design quantum communication networks and protocols

23MDINS109 INTRODUCTION TO QUANTUM SENSING

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course provides a comprehensive introduction to the principles and technologies of quantum sensing and metrology, highlighting how quantum phenomena such as superposition, entanglement, and squeezing enable precision measurements beyond classical limits. Students will explore fundamental concepts like the Standard Quantum Limit, Heisenberg limit, and quantum phase estimation, along with key measurement techniques including quantum interferometry, atomic clocks, magnetometry, and quantum imaging. The course also covers noise sources, decoherence, and error mitigation strategies, and examines cutting-edge applications in navigation, medical imaging, environmental monitoring, and space-based sensing. By the end, learners will gain both theoretical understanding and practical insight into the design and operation of advanced quantum sensor systems.

Course Objectives:

1. Introduce the principles of quantum sensing and metrology.
2. Explain how quantum superposition and entanglement enhance measurement sensitivity.
3. Study applications of quantum sensors across multiple domains.
4. Analyze noise, decoherence, and quantum limits on measurement.
5. Prepare students to design and analyze quantum-enhanced sensors.

UNIT I: INTRODUCTION TO QUANTUM SENSING AND METROLOGY 9 hours

Classical vs quantum sensing, Precision limits: Standard Quantum Limit (SQL), Quantum metrology fundamentals, Heisenberg limit, Quantum phase estimation for precision measurements, Quantum non-demolition measurements, Quantum error correction in sensing, Importance of coherence and entanglement in sensors.

UNIT II: QUANTUM MEASUREMENT PRINCIPLES

9 hours

Superposition and interference in measurement, Quantum Fisher information, Squeezed states for noise reduction, Photon counting and single-photon detectors, Spin-based measurements (NV centers, trapped ions), Ramsey interferometry, Quantum state tomography, Applications of quantum-enhanced interferometry.

UNIT III: QUANTUM SENSOR TECHNOLOGIES

9 hours

Atomic clocks (optical & microwave), Gravimeters and accelerometers, Magnetometers (SQUIDs, NV centers), Quantum gyroscopes, Quantum imaging & super-resolution microscopy, Quantum lidar and radar, Force and electric field sensing, Photonic quantum sensing systems.

UNIT IV: DECOHERENCE, NOISE, AND ERROR MITIGATION IN QUANTUM SENSING

9 hours

Sources of decoherence in quantum sensors, Thermal noise and quantum noise sources, Quantum back-action, Squeezing and noise reduction techniques, Dynamical decoupling techniques, Noise spectroscopy for sensor calibration, Robust error mitigation protocols, Evaluating sensitivity vs noise tradeoffs.

UNIT V: ADVANCED APPLICATIONS AND FUTURE QUANTUM SENSING SYSTEMS

9 hours

Quantum sensing for biological and medical imaging, Navigation and positioning without GPS, Quantum-enhanced gravitational wave detection (LIGO), Quantum-enhanced environmental monitoring, Sensors for national defense and security, Space-based quantum sensors, Integrated quantum photonic sensing platforms, Design of hybrid quantum-classical sensor systems.

Course Outcomes:

On successful completion of the course, the student will be able to:

CO1: Understand the basic principles of quantum sensing

CO2: Apply quantum superposition and entanglement to sensing

CO3: Analyze quantum sensor architectures

CO4: Evaluate sensitivity and error limits in quantum measurements

CO5: Design quantum sensing systems for real-world application

23MDINS110 QUANTUM OPTICS PREREQUISITES FOR QUANTUM TECHNOLOGIES

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course introduces the fundamental principles and applications of quantum optics and photonics. It covers the classical and quantum description of light, electromagnetic field quantization, and light-matter interactions. Topics include coherence theory, quantum noise, and advanced phenomena such as photon antibunching, squeezing, and cavity-QED. The course also explores emerging quantum photonics technologies, including single-photon sources, entangled photon generation, quantum key distribution, and quantum metrology, preparing students for research and experimentation in modern quantum optics.

Course Objectives:

1. Introduce fundamentals of light-matter interaction relevant for quantum technologies.
2. Explain the quantization of electromagnetic fields.
3. Study the role of photons as quantum information carriers.
4. Explore coherent states, squeezed states, and single-photon sources.
5. Prepare for quantum sensing, communication, and photonic quantum computing applications.

UNIT I: CLASSICAL AND QUANTUM DESCRIPTION OF LIGHT

9 hours

Review of electromagnetic waves, Maxwell's equations for light propagation, Plane waves, polarization, Poynting vector, Classical interference, diffraction, coherence, Blackbody radiation & Planck's hypothesis, Photoelectric effect, Photons as quantized light energy, Introduction to quantum theory of radiation.

UNIT II: QUANTIZATION OF ELECTROMAGNETIC FIELD

9 hours

Harmonic oscillator quantization, Field quantization in free space, Photon number (Fock) states, Coherent states and classical-quantum correspondence, Vacuum fluctuations and zero-point energy, Single-mode vs multi-mode quantization, Spontaneous and stimulated emission, Quantum field operators and commutation relations.

UNIT III: LIGHT-MATTER INTERACTION

9 hours

Two-level atom model, Absorption, stimulated emission, spontaneous emission, Einstein coefficients, Rabi oscillations, Jaynes-Cummings model, Resonant and non-resonant interaction, Cavity Quantum Electrodynamics (Cavity-QED), Atom-photon entanglement.

UNIT IV: QUANTUM COHERENCE AND QUANTUM NOISE

9 hours

Classical vs quantum coherence, First- and second-order coherence functions, Photon antibunching, Hanbury Brown and Twiss experiment, Quantum squeezing of light, Phase-sensitive amplification, Quantum noise, shot noise, and standard quantum limit, Quantum nondemolition measurements.

UNIT V: QUANTUM PHOTONICS APPLICATIONS

9 hours

Single-photon sources (quantum dots, NV centers, SPDC), Entangled photon pair generation, Photonic qubits and linear optical quantum computing, Quantum key distribution with photons, Photonic integrated circuits, Quantum sensors based on squeezed light, Quantum metrology using entangled photons, Designing experiments for quantum optics labs.

Course Outcomes:

On successful completion of the course, the student will be able to:

CO1: Understand quantum nature of light

CO2: Apply Maxwell's equations to optical fields

CO3: Analyze interaction of photons with matter

CO4: Evaluate coherence, squeezing, and quantum noise

CO5: Create models for photonic quantum systems

HONORS

Honors

23HDCSD101 DATA SCIENCE FOR BUSINESS

L T P C
3 0 0 3

Pre-requisite: Basic Data Handling Skills, Fundamentals of Programming

Course Description:

This course introduces the principles and applications of data science in solving business problems and driving data-informed decision-making. It equips students with the ability to frame business challenges as data problems, apply relevant data analytics techniques, and interpret insights to support strategic actions. Topics include data wrangling, exploratory data analysis, predictive modeling, and data visualization, all contextualized within various business domains such as marketing, finance, operations, and customer analytics. The course bridges the gap between technical data science skills and practical business applications.

Course Objectives:

The main objectives of the course is to

- 1.Expose with the basic rudiments of business intelligence system
- 2.Expose with different data analysis tools and techniques

UNIT I

9 hours

Introduction – Business problems and Data Science Solutions, Introduction to Predictive modeling: From Correlation to Supervised Segmentation

UNIT II

9 hours

Fitting the Data- Fitting a Model to Data, Overfitting and its Avoidance.

UNIT III

9 hours

Similarity, Neighbors, and Clusters, Decision Analytic Thinking: What is a Good model.

UNIT IV

9 hours

Representing and Mining text, Decision Analytic Thinking II: Toward Analytic Engineering.

UNIT V

9 hours

Other Data Science Tasks and Techniques, Data Science and Business Strategy.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understand the fundamentals of business intelligence.

CO2: Applying link to data mining with business intelligence.

CO3: Apply various modelling techniques.

CO4: Understand the data analysis and knowledge delivery stages.

CO5: Apply business intelligence methods to various situations and decide on appropriate technique.

23HDCSD102 SOFTWARE PROJECT MANAGEMENT USING AGILE

L	T	P	C
3	0	0	3

Pre-requisite: Software Engineering Fundamentals

Course Description:

This course provides a comprehensive understanding of software project management practices with a focus on Agile methodologies. It introduces the principles of Agile development, iterative planning, and adaptive project control. Students will learn how to manage project scope, time, cost, quality, communication, and risks in dynamic software environments.

Course Objectives:

The main objectives of the course is to

1. Teach how to manage a Project
2. Discuss Agile method of handling projects

UNIT I INTRODUCTION, THE AGILE BUSINESS CASE

9 hours

History, Background, and the Manifesto, Traditional Lifecycle, Agile Lifecycle, Scaling for Enterprise Agile, Four Agile Methodologies. The Agile Business Case: The Business Case, Business Value Models, Project Balance Sheet, Building the Business Case by Levels.

UNIT II QUALITY IN THE AGILE SPACE

9 hours

Quality Values and Principles, Thought Leaders and Agile Quality, Sampling for Quality Validation, Agile in the Waterfall: First Principles and Requisite Conditions, The Black Box, Interfaces, and Connectivity, Governing.

UNIT III SCOPE AND REQUIREMENTS

9 hours

Developing the Scope and Requirements: Agile Scope, Envisioning, Requirements, Planning at a Distance Planning and Scheduling: Planning in the Enterprise Context, Scheduling, Other Plans in the Enterprise Agile Project.

UNIT IV ESTIMATING COST AND SCHEDULE

9 hours

The Nature of Estimates, Drivers on Cost and Schedule, Building Estimates Teams Are Everything: The Social Unit, Principle and Values Guide Teams, Teams Are Building Blocks, Some Teams Work; Others Do Not, Matrix Management in the Agile Space.

UNIT V GOVERNANCE, MANAGING VALUE

9 hours

Governance Is Built on Quality Principles, Governance Verifies Compliance Managing Value: Defining and Accounting for Value, Burn-down Charts and Value Scorecards.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Apply Agile methodology for software development.

CO2: Critically analyze quality of software.

CO3: Estimate the software cost.

CO4: Develop and manage scope and requirements in Agile projects.

CO5: Implement governance and value management practices in Agile projects.

Textbooks:

23HDCSD201 DATA SCIENCE FOR BUSINESS LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite: Basic Data Handling Skills, Fundamentals of Programming

Course Description:

This laboratory course focuses on applying data science techniques to solve business problems using real-world datasets. Students will explore business-relevant tasks such as customer segmentation, sales forecasting, churn prediction, and marketing analysis. The lab emphasizes data preprocessing, visualization, modeling, and interpretation using tools such as Python, Excel, Power BI, and Tableau. By the end of the course, students will be able to build actionable insights and communicate findings for business decision-making.

Course Objectives:

The objectives of the course are to:

1. Enable students to apply data science concepts in business scenarios.
2. Provide hands-on experience in data cleaning, visualization, and interpretation.
3. Implement supervised and unsupervised learning methods for business use cases.
4. Analyze and interpret model performance using appropriate metrics.
5. Communicate business insights through dashboards and storytelling.

List of Experiments:

1. Load a real-world dataset (e.g., Titanic or Iris), explore basic descriptive statistics, correlations, and visualize feature relationships.
2. Implement a decision tree classifier to predict a target (e.g., survival in Titanic dataset) and visualize the tree structure.
3. Analyze feature correlations using Pearson/Spearman coefficients and use logistic regression for prediction with evaluation (accuracy, confusion matrix).
4. Implement a simple linear regression model on a dataset (e.g., house prices) and visualize best-fit line.
5. Show underfitting, good fit, and overfitting by fitting polynomial regression models of different degrees.
6. Use k-fold cross-validation to evaluate model performance and demonstrate regularization techniques (L1/L2).
7. Build a KNN model and vary k values to understand impact on accuracy (e.g., classifying digits or wine quality).
8. Implement K-means clustering on a dataset (e.g., customer segmentation or iris) and visualize the clusters.
9. Use confusion matrix, ROC-AUC, precision-recall curve to compare multiple classification models.
10. Load a sample document or dataset (e.g., SMS spam), tokenize, clean, and plot most frequent words using NLTK or spaCy.
11. Implement a spam classifier using CountVectorizer + Naive Bayes model on an SMS/email dataset.
12. Use TF-IDF vectorization and cosine similarity to find document similarity (e.g., for search/recommendation).
13. Train both models on the same dataset and compare their accuracies, tree depth, and feature importances.

Dept. of Computer Science and Engineering (Data Science)

14. Use a telecom churn dataset to predict customer churn using logistic regression or XGBoost with business interpretation.
15. Deploy any one model using Flask or Streamlit to demonstrate business integration.

Course Outcomes:

After completion of the course, Students will be able to

CO1: Analyze business datasets using statistical techniques and visual tools.

CO2: Implement machine learning models for classification, regression, and clustering in business contexts.

CO3: Evaluate model performance using metrics relevant to business outcomes.

CO4: Develop dashboards and visual reports for business decision support.

CO5: Translate model outputs into actionable business recommendations.

Honors

23HDCSD103 HEALTH CARE ANALYTICS

L	T	P	C
3	0	0	3

Pre-requisite: Fundamentals of AI and Machine Learning

Course Objectives:

The main objectives of the course is to

1. Discuss the role of data analytics in healthcare and the available resources.
2. Describe the components and challenges of EHR data in health care organizations.
3. Enable the learners to develop skills required for biomedical image and signal analysis.
4. Familiarize the learner with data mining techniques for clinical text.
5. Identify data analytics techniques for pervasive health.

UNIT I INTRODUCTION TO HEALTHCARE DATA ANALYTICS 9 hours

Introduction, Healthcare Data Sources and Basic Analytics, Advanced Data Analytics for Healthcare, Applications and Practical Systems for Healthcare, Resources for Healthcare Data analytics.

UNIT II ELECTRONIC HEALTH RECORDS 9 hours

Introduction, History of HER, Components of EHR, Coding Systems, Benefits of EHR, Barriers to Adopting EHR, Challenges of Using EHR Data.

UNIT III BIOMEDICAL IMAGE AND SIGNAL ANALYSIS 9 hours

Biomedical Image Analysis: Introduction, Biomedical Imaging Modalities, Object Detection, Image Segmentation, Image Registration, Feature Extraction.

Biomedical Signal Analysis: Types of Biomedical Signals, ECG Signal Analysis, Multivariate Biomedical Signal Analysis.

UNIT IV DATA MINING FOR CLINICAL TEXT 9 hours

Information Extraction, Current Methodologies -Rule Based Approaches, Pattern Based Algorithms, Clinical Text Corpora and Evaluation Metrics, Challenges of Processing Clinical Reports, Clinical Applications.

UNIT V DATA ANALYTICS FOR PERVASIVE HEALTH 9 hours

Introduction, Supporting Infrastructure and Technology-Body Area Networks(BAN),Dense/Mesh Sensor, Basic Analytic Techniques, Applications-Continuous Monitoring, Assisted Living.

Course Outcomes:

At the end of this course students will demonstrate the ability to

- CO1: Understand the role of data analytics in health care.
CO2: Analyze the components and challenges of EHR data in health care organizations.
CO3: Identify methods for biomedical image and signal analysis.
CO4: Use effective data mining techniques for clinical text.
CO5: Apply the appropriate data analytics techniques in pervasive healthcare.

Honors

23HDCSD104 SOFTWARE DEFINED DATA CENTER

L T P C
3 0 0 3

Pre-requisite: Computer Network, Operating Systems, Cloud Computing

Course Description:

This course provides a comprehensive understanding of the evolution and architecture of modern data centers with a focus on software-defined components. Students will learn about trends in software-defined compute, storage, networking, and security, and how these technologies support agility, scalability, and cost efficiency in IT infrastructure. Topics include hyperconvergence, virtualization, orchestration, DevOps practices, and the transition toward future data centers using flash storage, containers, and open-source tools. The course emphasizes aligning IT infrastructure with dynamic business needs through modern technologies.

Course Objectives:

The main objectives of the course is to

1. Introduce conventional Data Centers followed by Modern Data Centers
2. To discuss various software elements of modern data centers
3. Explain Virtualization concepts for Data Centers
4. Discuss Compute, Storage and Network virtualization

UNIT I INTRODUCTION

9 hours

Data Center evolution, A history of Modern Data Center, Focus on cost reduction, Focus on Customer service in the business, Flattening of the IT organization, IT as an operational Expense, Monolithic Storage Array rise and fall, Move From Disk to Flash, Emergence of Convergence, The Role of Cloud computing.

UNIT II EMERGING DATA CENTER TRENDS

9 hours

Emergence of SDCC, Commoditization of Hardware, Software Defined – Compute, Storage, Networking and Security, Software Defined Storage (SDS), Hyperconvergence, Hyper Converged Infrastructure(HCI) and SDS relationship, Flash in Hyperconvergence, Modern IT business Requirements.

UNIT III DATA CENTER AGILITY

9 hours

Principles and Strategies, Transform Data Center, Align Data Center and Business Needs, Server virtualization, VDI, Eliminate and Implement Monolithic to Hyperconvergence, Full Stack Management.

UNIT IV VHYPER CONVERGED INFRASTRUCTURE

9 hours

Software Defined Storage, SDS comparison to Traditional Storage, SDS requirements, SDS in Hyperconverged, Hyperconvergence Design Model, Virtual Storage appliances, Appliance vs. Software/Reference Architecture,

UNIT V FUTURE DATA CENTERS

9 hours

Data growth, Storage capacity, flash storage deployment, Deployment Experiences SDS and HCI, IT transformations- Automation, Orchestration, DevOps, Open Standards and Interoperability, Performance Benchmarking Standards, Future Trends, Containers Instead of virtual machines, Open Source tools, Beyond Today's Flash, Pooling of Resources.

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Understanding of difference between Conventional Data Center Vs Modern Data Centers.

CO2: Differentiate Cloud computing and Software Defined Data Centers.

CO3: Differentiate Virtualization with conventional techniques.

CO4: Explore the techniques of Software Defined Compute, Storage and Networking components.

CO5: Able Manage Software Defined Data Centers and Develop the techniques for future Data Centers.

Honors

23HDCSD202 HEALTH CARE ANALYTICS LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite: Python Programming, Machine Learning Basics

Course Description:

This lab course enables students to explore the application of data science techniques in healthcare contexts. Through hands-on experiments, students will work with structured and unstructured healthcare data, such as electronic health records (EHRs), biomedical signals, medical images, and clinical notes. They will perform tasks including cleaning, visualization, modeling, feature extraction, and anomaly detection. The lab focuses on practical skills to solve healthcare problems such as disease prediction, patient monitoring, clinical NLP, and medical image processing.

Course Objectives:

The objectives of the course are to

1. To explore and preprocess real-world healthcare datasets for analysis.
2. To apply statistical and machine learning models to predict disease risks and patient outcomes.
3. To analyze medical signals and biomedical images for clinical pattern recognition.
4. To process and extract information from unstructured clinical text.
5. To simulate and monitor patient health trends using wearable and sensor data.

List of Experiments:

1. Explore a Public Healthcare Dataset: Dataset: UCI Diabetes / Heart Disease dataset
Load, clean, explore missing values, visualize trends (age vs. risk), and perform statistical summaries.
2. Perform analysis like patient admission trends, average length of stay, readmission rates using synthetic hospital visit logs.
3. Create a simple logistic regression model to predict disease risk (e.g., diabetes) from patient features.
4. Simulate or use de-identified EHR data to process patient demographics, visualize diagnosis frequency using bar charts and histograms.
5. Implement a lookup for ICD-10 code mapping in a patient record dataset and summarize diagnosis categories.
6. Detect duplicates, missing data, and inconsistent formats in a sample EHR file; generate a cleaning report.
7. Load a biomedical image (e.g., X-ray or MRI from MedMNIST), apply thresholding, edge detection, and segment regions of interest.
8. Extract features like histogram of gradients (HoG), texture, or shape features from an image dataset and plot feature maps.
9. Load an ECG signal file (e.g., MIT-BIH dataset), filter noise, detect R-peaks, and calculate heart rate variability using scipy or neurokit2.
10. Tokenize, remove stopwords, lemmatize a set of clinical notes. Visualize most common terms using word cloud or frequency distribution.
11. Write custom rules to extract drug names, dosage, symptoms using regular expressions or spaCy from simulated prescription notes.
12. Convert clinical notes into TF-IDF vectors and classify them into diagnosis types using Naive Bayes.

13. Simulate or use sample Body Area Network (BAN) data (e.g., temperature, ECG, accelerometer), preprocess and visualize trends for patient monitoring.
14. Implement a threshold-based or unsupervised anomaly detection method (e.g., Isolation Forest) on continuous wearable data.
15. Simulate patient activity logs (e.g., sleep, steps, medication) and build a rule-based alert system for deviations from normal behavior.

Course Outcomes:

After completion of the course, Students will be able to

CO1: Preprocess and analyze structured healthcare data for trends and clinical insights.

CO2: Apply machine learning techniques to classify diseases and predict patient risk.

CO3: Extract and interpret patterns from medical images and physiological signals.

CO4: Perform clinical text processing to extract meaningful health information using NLP techniques.

CO5: Implement anomaly detection and patient monitoring systems using wearable sensor data.

Textbooks:

1. “Healthcare data analytics (Vol. 36)” by Reddy, C. K., & Aggarwal, C. C. (Eds.), CRC Press, 2015.

Honors

23HDCSD105 MEDICAL IMAGE DATA PROCESSING

L	T	P	C
3	0	0	3

Pre-requisite: Probability and Statistics, Linear Algebra, Python Programming

Course Description:

This course introduces the principles and techniques of medical image data processing, focusing on medical imaging modalities, image representation, filtering, segmentation, spatial transformations, image registration, and CT reconstruction. It equips students with the knowledge to analyze, process, and extract meaningful information from medical images for clinical and healthcare applications.

Course Objectives:

The main objective of the course is to

1. Understand the significance of image process in medical industry
2. Teach the process of extracting correct information in medical images

UNIT I BASICS OF MEDICAL IMAGE SOURCES

9 hours

Radiology, The Electromagnetic Spectrum, Basic X-Ray Physics, Attenuation and Imaging, Computed Tomography, Magnetic Resonance Tomography, Ultrasound, Nuclear Medicine and Molecular Imaging, Other Imaging Techniques, Radiation Protection and Dosimetry Image Processing in Clinical Practice: Application Examples, Image Databases, Intensity Operations, Filter Operations, Segmentation, Spatial Transforms, Rendering and Surface Models, Registration, CT Reconstruction

UNIT II IMAGE REPRESENTATION

9 hours

Pixels and Voxels, Gray Scale and Color Representation, Image File Formats, Dicom, Other Formats – Analyze 7.5, NIFTI And Interfile, Image Quality and The Signal-To-Noise Ratio, Practical Lessons Operations in Intensity Space: The Intensity Transform Function and The Dynamic Range, Windowing, Histograms and Histogram Operations, Dithering and Depth, Practical Lessons

UNIT III FILTERING AND TRANSFORMATIONS, SEGMENTATION

9 hours

The Filtering Operation, The Fourier Transform, Other Transforms, Practical Lessons Segmentation: The Segmentation Problem, ROI Definition and Centroids, Thresholding, Region Growing, More Sophisticated Segmentation Methods, Morphological Operations, Evaluation of Segmentation Results

UNIT IV SPATIAL TRANSFORMS

9 hours

Discretization – Resolution and Artifacts, Interpolation and Volume Regularization, Translation and Rotation, Reformatting, Tracking and Image-Guided Therapy Rendering and Surface Models: Visualization, Orthogonal and Perspective Projection, and The Viewpoint, Raycasting, Surface-Based Rendering

UNIT V REGISTRATION, CT RECONSTRUCTION

9 hours

Fusing Information, Registration Paradigms, Merit Functions, Optimization Strategies, Some General Comments, Camera Calibration, Registration to Physical Space, Evaluation of Registration Results

CT Reconstruction: Introduction, Radon Transform, Algebraic Reconstruction, Some Remarks on Fourier Transform and Filtering, Filtered Back projection

Course Outcomes:

At the end of this course students will demonstrate the ability to

CO1: Analyze medical images

CO2: Apply image processing techniques to medical images

CO3: Achieve Filtering and Transformations, Segmentation

CO4: Apply various transformations.

CO5: Accomplish registration and reconstruction.
