COMPUTER SCIENCE & ENGINEERING (IoT)

Course Structure

&

Detailed Syllabi

For the students admitted to

B. Tech. Regular Four Year Degree Programme from the academic year 2020-21

and

B. Tech. Lateral Entry Scheme from the academic year 2021-22

B.TECH. COMPUTER SCIENCE & ENGINEERING (IoT)

**MADANAPALLE INSTITUTE OF TECHNOLOGY & SCIENCE,
MADANAPALLE**

Branch: COMPUTER SCIENCE & ENGINEERING (IoT)

Total Credits	160 Credits for 2020 (Regular) & 121 Credits for 2021(Lateral Entry) Admitted Batch
	163 Credits for 2021(Regular) & 124 Credits 2022(Lateral Entry) Admitted Batch onwards

I. Induction Program and Holistic Development Activities

Sl.No	Title	Duration
1	Induction Program (Mandatory)	Three weeks' duration at the start of First Year (Refer Annexure - I)
2	Holistic Development Activities (Every Student from Semester 2 – 8 should register for at least one activity)	Three hours per week (Activity list is enclosed in Annexure - I)
3	Virtual Laboratory (Students are encouraged to choose and register for any of the Virtual laboratories he /she is interested)	As specified by the Virtual Laboratory

R20 - Curriculum Structure

I Year I Semester

THREE WEEK MANDATORY INDUCTION PROGRAMME

- Yoga and Meditation
- Sports and Games
- NSS
- NCC
- MITS Social Responsibility
- ClubManagement module
- Design Thinking
- Spoken and Written Communication

- *Proficiency modules*
 - Basic Computer Proficiency
 - Interpersonal Skills
 - Computer Graphics
 - Web Programming
 - Mobile Apps
 - Vocabulary Enhancement

HOLISTIC DEVELOPMENT ACTIVITIES

Description of Activities

1. Physical and Health
2. Culture
3. Literature and Media
4. Social Service
5. Self-Development
6. Nature and Environment
7. Innovation

OPEN ELECTIVE – I			
(To be offered under MOOC’s Category from SWAYAM – NPTEL)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	20HUM3M01	Project Management for Managers	Management Studies
2	20HUM3M02	Ethics in Engineering Practice	Management Studies
3	20HUM3M03	E – Business	Management Studies
4	20CE3M01	Integrated Waste Management for Smart City	Civil
5	20CE3M02	Soil and Water Conservation Engineering	Civil
6	20CE3M03	Plastic Waste Management	Civil
7	20CE3M04	Safety in Construction	Civil
8	20ME3M01	Operations Management	Mechanical
9	20ME3M02	Operations Research	Mechanical
10	20ME3M03	Design Thinking and Innovation	Mechanical
11	20EEE3M01	Non-Conventional Energy Sources	EEE
12	20EEE3M02	Design of Photovoltaic Systems	EEE
13	20ECE3M01	Microprocessors and Interfacing	ECE
14	20ECE3M02	Microprocessors and Microcontrollers	ECE
15	20ECE3M04	System Design Through Verilog	ECE
16	20IE3M01	Intellectual Property Rights and Competition Law	Multidisciplinary
17	20IE3M02	Introduction to Research	Multidisciplinary
18	20IE3M03	Roadmap for Patent Creation	Multidisciplinary
19	20IE3M04	Energy Conversion Technologies (Biomass And Coal)	Multidisciplinary
20	20IE3M05	Research Methodology	Multidisciplinary
Any new Interdisciplinary Course offered by SWAYAM NPTEL can be appended in future.			

Dept. of Computer Science & Engineering (IoT)

OPEN ELECTIVE – II			
(To be offered under Conventional Mode)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	20MAT301	Advanced Numerical Methods	Mathematics
2	20MAT302	Engineering Optimization	Mathematics
3	20PHY301	Optical Physics and its Applications	Physics
4	20PHY302	LASER Physics and Advanced LASER Technology	Physics
5	20CHE301	Introduction to Petroleum Industry	Chemistry
6	20CHE302	Green Chemistry and Catalysis for Sustainable Environment	Chemistry
7	20CE301	Ground Improvement Techniques	Civil
8	20CE302	Environmental Impact Assessment	Civil
9	20CE303	Watershed Management	Civil
10	20ME301	Material Science for Engineers	Mechanical
11	20ME302	Elements of Mechanical Engineering	Mechanical
12	20EEE301	Industrial Electrical Systems	EEE
13	20EEE302	Introduction to MEMS	EEE
14	20ECE301	Bio-Medical Electronics	ECE
15	20ECE302	VLSI Design	ECE
Any new Interdisciplinary courses can be appended in future.			

Dept. of Computer Science & Engineering (IoT)**OPEN ELECTIVE – III**

(To be offered under MOOC's Category from SWAYAM – NPTEL)

Sl. No.	Course Code	Course Title	Course Offered by Department of
1	20HUM3M04	Management Information System	Management Studies
2	20HUM3M05	Business Analytics & Text Mining Modeling Using Python	Management Studies
3	20CE3M05	Remote Sensing and GIS	Civil
4	20CE3M06	Wastewater Treatment and Recycling	Civil
5	20CE3M07	Building Materials And Composites	Civil
6	20ME3M04	Power Plant Engineering	Mechanical
7	20ME3M05	Mechatronics and Manufacturing Automation	Mechanical
8	20EEE3M03	Introduction to Smart Grid	EEE
9	20EEE3M04	Transducers For Instrumentation	EEE
10	20IE3M06	Learning Analytics Tools	Multidisciplinary

Any new Interdisciplinary Course offered by SWAYAM NPTEL can be appended in future.

Dept. of Computer Science & Engineering (IoT)

OPEN ELECTIVE – IV			
(To be offered under Conventional Mode)			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	20PHY303	Thin Film Technology and its Applications	Physics
2	20CHE303	Introduction to Nano Science and Technology	Chemistry
3	20CHE304	Computational Methods in Materials Science and Engineering	Chemistry
4	20CE304	Green Buildings and Energy Conservation	Civil
5	20CE305	Environmental Engineering	Civil
6	20ME303	Total Quality Management	Mechanical
7	20ME304	Entrepreneurship	Mechanical
8	20EEE303	Robotics	EEE
9	20EEE304	Electrical Safety	EEE
10	20ECE304	DSP Architecture	ECE
Any new Interdisciplinary courses can be appended in future.			

Dept. of Computer Science & Engineering (IoT)

OPEN ELECTIVE – V (HUMANITIES)			
<i>(To be offered under Conventional Mode)</i>			
Sl. No.	Course Code	Course Title	Course Offered by Department of
1	20HUM301	Principles of Management	Humanities
2	20HUM302	Human Resource Development	Humanities
3	20HUM303	Soft Skills	Humanities
4	20HUM304	National Cadet Corps	Humanities
Any new Interdisciplinary courses can be appended in future.			

LIST OF PROFESSIONAL ELECTIVES

Professional Elective – I		
Sl. No.	Course Code	Course Title
1.	20CSO401	Data Mining and Data Warehousing
2.	20CSO402	Wireless Sensor Networks
3.	20CSO403	Cryptography and Network Security
4.	20CSO404	IoT Architecture and Protocols
5.	20CSO405	Data Visualization Techniques
Any advanced courses can be appended in future.		

Professional Elective – II (To be offered under MOOC's Category from SWAYAM – NPTEL)		
Sl. No.	Course Code	Course Title
1.	20CSO4M01	Software Testing
2.	20CSO4M02	Introduction to Soft computing
3.	20CSO4M03	Online Privacy
4.	20CSO4M04	Privacy and Security in Online Social Media
5.	20CSO4M05	Ethical Hacking
6.	20CSO4M06	Mobile Computing
7.	20CSO4M07	Computer Vision
8.	20CSO4M08	Cloud Computing and Distributed Systems
Any other new Disciplinary Course which doesn't exist in the Curriculum can be appended in future.		

Professional Elective – III		
Sl. No.	Course Code	Course Title
1.	20CSO406	Design of Smart Cities
2.	20CSO407	Service Oriented Architecture
3.	20CSO408	Malware Analysis
4.	20CSO409	Information Retrieval
5.	20CSO410	Design Patterns
Any advanced courses can be appended in future.		

Dept. of Computer Science & Engineering (IoT)

Professional Elective – IV		
Sl. No.	Course Code	Course Title
1.	20CSO411	Privacy and Security in IoT
2.	20CSO412	Real Time Systems
3.	20CSO413	Deep Learning
4.	20CSO414	Digital Image Processing
5.	20CSO415	Software Project Management
Any advanced courses can be appended in future.		

Professional Elective – V		
Sl. No.	Course Code	Course Title
1.	20CSO416	DevOps
2.	20CSO417	Reinforcement Learning
3.	20CSO418	Cyber Security
4.	20CSO419	Software Quality Assurance
5.	20CSO420	Human Computer Interaction
Any advanced courses can be appended in future.		

SKILL ORIENTED COURSES

Skill Oriented Course - I		
Sl. No	Course Code	Course Title
1	20CSO601	Web Scripting
2	20CSO602	Android Application Development
Any advanced courses can be appended in future		

Skill Oriented Course – II		
Sl. No	Course Code	Course Title
1	20ENG601	Corporate Communication
Any advanced courses can be appended in future		

Skill Oriented Course - III		
Sl. No	Course Code	Course Title
1	20CSO603	AI Tools, Techniques and Applications
2	20CSO604	Full Stack Development
Any advanced courses can be appended in future		

Skill Oriented Course - IV		
Sl. No	Course Code	Course Title
1	20CSO605	Multimedia Computing
2	20CSO606	Software Engineering
Any advanced courses can be appended in future		

Skill Oriented Course - V		
Sl. No	Course Code	Course Title
1	20CSO607	Blockchain Architecture
2	20CSO608	NoSQL
Any advanced courses can be appended in future

Dept. of Computer Science & Engineering (IoT)

I Year I Semester

B. Tech I Year I Semester

20ENG101 PROFESSIONAL ENGLISH

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

Communication takes place in many forms, however the major impact and effectiveness is in its professionalism. This course defines, enlightens and enables learners to engage in Professional Communication by addressing all the areas of communication – Listening, Speaking, Reading and Writing. This course also deals with various types of communication – Verbal, Non-verbal, Storytelling, Crucial Conversations, Written Communication, Vocalics, Eye Contact, Posture, etc.

Course Objectives: This course enables the student to –

1. Engage effectively in a professional environment
2. Understand the intricacies and implications of professional communication
3. Use linguistic skills in any given context
4. Conduct self in a learning environment
5. Be better prepared for employment

UNIT I GRAMMAR & VOCABULARY 9 hours

Grammar - Tense, Reported Speech, Modals, Conditionals; Vocabulary development - prefixes, suffixes, compound words, synonyms & antonyms.

UNIT II READING SKILLS & WRITTEN COMMUNICATION 9 hours

Reading - short comprehension passages, practice in skimming, scanning and predicting; Writing-completing sentences, developing hints; Paragraph writing- topic sentence, main ideas, coherence.

UNIT III VERBAL & NON-VERBAL ASPECTS 9 hours

Verbal - Introducing oneself, exchanging personal information, Using 'Wh'- Questions, asking and answering, yes or no questions- asking about routine actions and expressing opinions; Non-Verbal – Use of body language, combating nervousness.

UNIT IV CONVERSATIONS 9 hours

Listening-short texts & conversing, formal and informal conversations, short group conversations, speaking about oneself, sharing information of a personal kind speaking about one's friend.

UNIT V BUSINESS ENVIRONMENT & ETIQUETTES 9 hours

Greeting & taking leave; Writing e-mails, memos, reports, etc

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Read articles and understand professional communication
2. Participate effectively in informal conversations
3. Introduce themselves and their friends and express opinions in English
4. Comprehend conversations and short talks delivered in English
5. Write short essays of a general kind and personal letters and emails in English.

Text Books:

1. Guy Brook Hart & Norman Whitby; Cambridge English-Business Benchmark: Pre-Intermediate to Intermediate; Published by: Cambridge University Press.
2. Adrian Doff, Craig Thaine, Herbert Puchta, et al; Empower: Intermediate (B1+); Published by: Cambridge University Press.

Reference Books:

1. AJ Thomson & AV Martinet; A Practical English Grammar; Oxford University Press, 2015.
2. Raymond Murphy; English Grammar in Use with CD; Cambridge University Press, 2013.
3. K.S. Yadurajan; Modern English Grammar; Oxford University Press, 2014.
4. William Strunk Jr; The Elements of Style; ITHACA, N.Y.; W.P. HUMPHREY, 2006
5. Joseph Devlin; How to Speak and Write Correctly; ITHACA, N.Y.; W.P. HUMPHREY, 2006
6. Anjana Agarwal; Powerful Vocabulary Builder; New Age Publishers, 2011.
7. Writing Tutor; Advanced English Learners' Dictionary; Oxford University Press, 2012.
8. <http://www.cambridgeenglish.org/in/>

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

B. Tech I Year I Semester

20MAT101 ENGINEERING CALCULUS

L T P C
3 1 0 4

Pre-requisite: Mathematics at Intermediate or Equivalent Level

Course Description:

Communication takes place in many forms, however the major impact and effectiveness is in its professionalism. This course defines, enlightens and enables learners to engage in Professional Communication by addressing all the areas of communication – Listening, Speaking, Reading and Writing. This course also deals with various types of communication – Verbal, Non-verbal, Storytelling, Crucial Conversations, Written Communication, Vocalics, Eye Contact, Posture, etc.

Course Objectives: This course enables the student to –

1. To introduce the basic concepts of definite integrals, improper integrals, Beta and Gamma functions.
2. To acquire knowledge on mean value theorems in calculus.
3. To illustrate various techniques of testing the convergence of infinite series and introduces the functions of sine and cosine series.
4. To familiarize the knowledge of limit, continuity and the derivatives, extreme values in Multivariable.
5. To emphasize the role of Double and Triple integrals in dealing with area and volume of the regions.

UNIT I INTEGRAL CALCULUS

12 hours

Definite integrals; Applications of definite integrals to evaluate area and length of curves, surface areas and volumes of revolutions; Beta and Gamma functions and their properties.

UNIT II DIFFERENTIAL CALCULUS

12 hours

Rolle's Theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders (without proofs); indeterminate forms, Maxima and minima.

UNIT III SEQUENCE AND SERIES

12 hours

Sequence and Series, their Convergence and tests for convergence; Power series, Taylor's series, Series for exponential, trigonometric and logarithmic functions; Fourier series: Half range sine and cosine series, Parseval's theorem.

UNIT IV MULTIVARIABLE DIFFERENTIAL CALCULUS

12 hours

Limit, continuity and partial derivatives, directional derivatives, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers.

UNIT V MULTIVARIABLE INTEGRAL CALCULUS

12 hours

Multiple Integration: double integrals (Cartesian and polar), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes (double integration), triple integrals, gradient, curl and divergence, Green's, Stokes and Gauss divergence theorems (without proofs).

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Evaluate the definite integrals, Beta and Gamma functions and calculate length of curve and underlying area.
2. Relate the results of mean value theorems in calculus to Engineering problems.
3. Use the Power series and Fourier series for ascertaining the stability and convergence of various techniques.
4. Apply the functions of several variables to evaluate the rates of change with respect to time and space variables in engineering.
5. Compute the area and volume by interlinking them to appropriate double and triple integrals.

Text Books:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 42th Edition, 2012.
2. G. B. Thomas, Maurice D. Weir, Joel Hass, Frank R. Giordano, Thomas' Calculus Pearson education 11th Edition, 2004.

Reference Books:

1. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002.
2. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006.
3. Veerarajan T., Engineering Mathematics for first year, Tata McGraw-Hill, New Delhi, 2008.
4. Ramana B.V., Higher Engineering Mathematics, Tata McGraw Hill New Delhi, 11th Reprint, 2010.
5. D. Poole, Linear Algebra: A Modern Introduction, 2nd Edition, Brooks/Cole, 2005.
6. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

B. Tech I Year I Semester

20CHE101 ENGINEERING CHEMISTRY

L T P C
3 0 0 3

Pre-requisite: Basic Chemistry at Intermediate or equivalent level.

Course Description:

Deals with the basic principles of various branches of chemistry like physical, organic, inorganic, analytical and nanomaterial chemistry.

Course Objectives:

Students will

1. Understand, analyse and determine the impurities present in the water.
2. Appreciate the synthetic organic reactions used in daily life
3. Learn the principles of spectroscopies to analyse them.
4. Value the basic concepts of thermodynamics and electrochemistry.
5. Be exposed to the importance of nano and engineering materials used in their daily life and industry

UNIT I IMPURITIES PRESENT IN WATER AND WATER TREATMENT 9 hours

Impurities present in Water: Impurities in water (BIS and WHO standards), Hardness of water-determination of hardness - EDTA Method (numerical problems), Alkalinity of water (numerical problems), Estimation of Dissolved Oxygen by Winkler's method and its importance and Chlorides. Disadvantages (industry level) of using hard water (Boiler corrosion, Caustic embrittlement, Scale and Sludges). Softening of water (Ion exchange method), Treatment of brackish water by Reverse Osmosis method. Water treatment for civic applications: coagulation, sedimentation, filtration, sterilization - chlorination and ozonation. Concept of break point chlorination.

UNIT II PERIODIC PROPERTIES AND ORGANIC REACTIONS 7 hours

Periodic properties: Electronic configurations, atomic and ionic sizes, ionization energies, oxidation states, molecular geometries. Organic Reactions: Introduction to substitution (SN^1 and SN^2), elimination (E_1 and E_2) - Addition, Condensation and Free Radical Polymerization Reaction (only the mechanism).

UNIT III SPECTROSCOPY 8 hours

Basic Principle and Applications of UV-Visible, FT-IR, Raman, Microwave and Nuclear Magnetic Resonance (NMR) Spectroscopy

UNIT IV THERMODYNAMICS AND ELECTROCHEMISTRY 11 hours

Thermodynamics: Systems, State Functions, Thermodynamic Functions: Work, Energy, Entropy and Free energy. Estimations of Entropy in Isothermal, Isobaric and Isochoric processes. Electrochemistry: Free energy and EMF. Cell potentials, the Nernst equation and applications. Batteries (Lead-Acid and Lithium ion) and Fuel-Cells (H_2-O_2).

Dept. of Computer Science & Engineering (IoT)

UNIT V **ENGINEERING MATERIALS, NANOSCIENCE & NANOTECHNOLOGY**

10 hours

Engineering Materials: Cement Materials and Manufacturing Process. Reactions in setting and hardening of Cement. Lubricants – definition, Properties of lubricants – Viscosity, Viscosity Index, Flash Point and Pour Point. Nanomaterials: Introduction, Classes/Types, Chemical synthesis of Nanomaterials: Chemical Vapor Deposition method (Carbon Nanotubes), Characterization by powder XRD (Scherrer's equation). Applications of Nanomaterials: Solar Energy and Photocatalytic Dye Degradation (TiO₂).

Course Outcomes:

At the end of the course, students will be able to:

1. Analyse and determine the impurities in water such as hardness, alkalinity for sustainable development.
2. Prepare organic compounds/polymers for environmental, safety and society need.
3. Comprehend the principles and applications of spectroscopies.
4. Apply the concept of free energy in thermodynamics, electrochemistry for solving the problems evolve in the engineering processes.
5. Acquire spotlight to the nanomaterials and basic engineering materials used in academics, industry, and daily life.

Text Books:

1. P. W. Atkins & Julio de Paula, 'The Elements of Physical Chemistry', Ninth edition (Oxford University Press, Oxford 2010)
2. C. N. Banwell, Fundamentals of Molecular Spectroscopy, Fourth Edition, (Tata McGraw Hill, 2008).
3. C. N. Banwell, Fundamentals of Molecular Spectroscopy, Fourth Edition, (Tata McGraw Hill, 2008).
4. Dr. S. S. Dara and Dr. S. S. Umare, A Textbook of Engineering Chemistry, 1st Edition., (S. Chand & Company Ltd, 2000).
T. Pradeep, Nano: The Essentials, 1st Edition, (Tata McGraw-Hill Publishing Company Limited, 2017).
- 5.

Reference Books

1. 'Physical Chemistry', D. W. Ball, First Edition, India Edition (Thomson, 2007).
2. Perry's Chemical Engineers' Handbook, Don W. Green and Marylee Z. Southard, 9th Edition (McGraw Hill, 2018).
3. Engineering Chemistry, Dr. Suba Ramesh and others, 1st Edition (Wiley India, 2011).
4. Jain and Jain, Engineering Chemistry, 16th Edition (Dhanpat Rai Publishing Company (P) Ltd, 2016).
5. Amretashis Sengupta, Chandan Kumar Sarkar (eds.), Introduction to Nano Basics to Nanoscience and Nanotechnology (Springer-Verlag, Berlin, Heidelberg, 2015)

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

B. Tech I Year I Semester

20ME101 ENGINEERING GRAPHICS

L T P C
2 0 2 3

Pre-requisite: None

Course Description:

Introduction to AutoCAD commands, simple drawings, orthographic projections, projection of points, lines, planes; auxiliary projections; projections and sections of solids; development and intersection of surfaces; isometric projections.

Course Objectives:

1. Engineering Graphics is the primary medium for development and communicating design concepts.
2. Through this course the students are trained in Engineering Graphics concepts with the use of AutoCAD.
3. The latest ISI code of practice is followed while preparing the drawings using AutoCAD.
4. Computerized drawing is an upcoming technology and provides accurate and easily modifiable graphics entities.
5. Storage and Retrieval of Drawings is also very easy and it takes very less time to prepare the drawings. Also enhances the creativity.

UNIT I INTRODUCTION TO AUTO CAD

12 hours

Introduction to AutoCAD commands, simple drawings using AutoCAD, Introduction to orthographic Projections – Theory, techniques, first angle projections and third angle projections.

UNIT II PROJECTIONS OF POINTS & LINES

12 hours

Projections of points: Positions, notation system and projections. Projections of lines: Positions, terms used, different cases, traces of lines and finding true length.

UNIT III PROJECTIONS OF PLANES & SOLIDS

12 hours

Projections of planes: Positions, terms used, different cases and projections procedure.

Projections of Solids: Projections of Regular Solids inclined to one plane (resting only on HP).

UNIT IV SECTIONS AND DEVELOPMENTS OF SOLIDS

12 hours

Section of solids: Sectional view of right regular solids (Prism and cylinder), true shapes of the sections.

Development of Surfaces: Development of surfaces of right regular solids (Prism, Cylinder and their Sectional Parts).

UNIT V INTERSECTIONS & ISOMETRIC PROJECTIONS

12 hours

Intersections of surfaces of solids: Intersection between prism Vs prism, prism Vs cylinder, cylinder Vs cylinder.

Isometric Projections: Theory of isometric drawing and orthographic views, Conversion of isometric view into orthographic views.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Student will be able to

1. Identify various commands in AutoCAD software and apply AutoCAD skills to develop the new designs.
2. Draw the projections of points, straight lines using AutoCAD.
3. Draw the projections of the planes, solids using AutoCAD
4. Sketch the developments of solids, sections of solids using AutoCAD.
5. Draw the conversion of the isometric views to orthographic views and intersections of surfaces using AutoCAD.

2. N D Bhat, Engineering Drawing, Charotar Publishing House, Gujarath,15th Edition, 2010.
3. K.L. Narayana, P. Kanniah, Engineering Drawing, Scitech Publishers, 2nd Edition, 2010.

Reference Books:

1. Dhananjay A Jolhe, Engineering Drawing: with an introduction to AutoCAD, Tata McGraw Hill, 2008.
2. Warren J. Luzadder & Jon M. Duff Fundamentals of Engineering Drawing, 11th edition, Prentice Hall of India, New Delhi.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

B. Tech I Year I Semester

20CSE101 PROGRAMMING FOR PROBLEM SOLVING (PYTHON)

L	T	P	C
2	0	3	3.5

Pre-requisite: None

Course Description:

Python is a language with a simple syntax, and a powerful set of libraries. It is an interpreted language, with a rich programming environment. While it is easy for beginners to learn, it is widely used in many scientific areas for data exploration. This course is an introduction to the Python programming language for students without prior programming experience.

This course provides knowledge on how to implement programs in python language and to solve computational problems using the various programming constructs including data structures, functions, string handling mechanisms and file handling concepts

Course Objectives:

This course enables students to

1. Learn Python programming constructs.
2. Implement Python programs with conditional structures and loops.
3. Use functions for structuring Python programs.
4. Handle compound data using Python lists, tuples, and dictionaries.
5. Manipulate data using files handling in Python.
6. Getting exposed to the basics of Object Oriented Programming using Python

UNIT I: INTRODUCTION

12 hours

Algorithms, building blocks of algorithms (flow chart), History of Python, features of Python Programming, Running Python Scripts, Variables, Assignment, Keywords, Input-Output, Indentation. Data Types - Integers, Strings, Boolean.

- a) Develop a flowchart for the various arithmetic operations on numbers.
- b) Develop a flowchart to check whether the number is positive or negative.
- c) Develop a flowchart for finding whether a given number is even or odd.
- d) Develop a flowchart for finding biggest number among three numbers.
- e) Develop a flowchart for displaying reversal of a number.
- f) Develop a flowchart to print factorial of a number using function.
- g) Develop a flowchart to generate prime numbers series up to N using function.
- h) Develop a flowchart to check given number is palindrome or not using function.
- i) Alexa travelled 150 kms by train. How much distance in miles she actually covered?

UNIT II: OPERATORS AND EXPRESSIONS

12 hours

Operators- Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators, Expressions and order of evaluations. Control Flow - if, if-elif else, for, while, break, continue, pass.

- a) Swapping of two number with and without using temporary variable.
- b) If the age of Ram, Sam, and Khan are input through the keyboard, write a python program to determine the eldest and youngest of the three.
- c) Develop a program that performs arithmetic operations (Addition, Subtraction, Multiplication, and Division) on integers. Input the two integer values and operator for performing arithmetic operation through keyboard.

Dept. of Computer Science & Engineering (IoT)

The operator codes are as follows:

- For code '+', perform addition.
- For code '-', perform subtraction.
- For code '*', perform multiplication.
- For code '/', perform division.

d) Implement the python program to generate the multiplication table.

e) Implement Python program to find sum of natural numbers

f) If the first name of a student is input through the keyboard, write a program to display the vowels and consonants present in his/her name.

g) The marks obtained by a student in 5 different subjects are input through the keyboard. Find the average and print the student grade as per the MITS examination policy as shown below.

% OBTAINED GRADE

90 - 100 O (Outstanding)

80 - 89 A+ (Excellent)

70 - 79 A (Very Good)

60 - 69 B+ (Good)

50 - 59 B (Above)

45 - 49 C (Average)

40 - 44 P (Pass)

< 40 F (Fail)

h) Implement Python Script to generate prime numbers series up to N.

i) Given a number x, determine whether it is Armstrong number or not. Hint: For example, 371 is an Armstrong number since $3^3 + 7^3 + 1^3 = 371$. Write a program to find all Armstrong number in the range of 0 and 999.

UNIT-III: DATA STRUCTURES

12 hours

Lists - Operations, Slicing, Methods; Tuples, Sets, Dictionaries, Sequences. Comprehensions. Functions - Defining Functions, Calling Functions, Passing Arguments, variable in python-Global and Local Variables.

a) Write a Python script to

- create a list
- access elements from a list
- slice lists
- change or add elements to a list
- delete or remove elements from a list

b) Write a Python script to read the values from a list and to display largest and smallest numbers from list.

c) Write a Python script to compute the similarity between two lists.

d) Write a Python script to read set of values from a Tuple to perform various operations.

e) Write a Python script to perform basic dictionary operations like insert, delete and display.

f) Write a Python program to count the occurrence of each word in a given sentence.

g) Define a dictionary named population that contains the following data.

Keys	Values
Shanghai	17.8
Istanbul	13.3
Karachi	13.0
Mumbai	12.5

h) Write a Python script to create Telephone Directory using dictionary and list to perform basic functions such as Add entry, Search, Delete entry, Update entry, View and Exit.

i) Implement Python script to display power of given numbers using function.

j) Implement a Python program that takes a list of words and returns the length of the longest one using function.

UNIT-IV:

String Handling -Modules: Creating modules, import statement, from import statement, name spacing
Files and Directories:

- a) Implement Python program to perform various operations on string using string libraries.
- b) Implement Python program to remove punctuations from a given string.
- c) Write a Python program to change the case of the given string (convert the string from lower case to upper case). If the entered string is “computer”, your program should output “COMPUTER” without using library functions.
- d) Implement Python program to capitalize each word in a string. For example, the entered sentence “god helps only people who work hard” to be converted as “God Helps Only People Who Work Hard”
- e) Write a Python script to display file contents.
- f) Write a Python script to copy file contents from one file to another.
- g) Write a Python script to combine two text files contents and print the number of lines, sentences, words, characters and file size.
- h) Write a Python commands to perform the following directory operations.
 - List Directories and Files
 - Making a New Directory
 - Renaming a Directory or a File
 - Removing Directory or File

UNIT-V:

Python packages: Predefined Packages and User-defined Packages, Package Creation.

Object Oriented Programming using Python: Introduction to OOP, Creating Classes and Objects in Python, Creating Methods in Python

Brief Tour of the Standard Library: Turtle

- a) Create a package named Cars and build three modules in it namely, BMW, Audi and Nissan. Illustrate the modules using class. Finally we create the __init__.py file. This file will be placed inside Cars directory and can be left blank or we can put the initialization code into it.
- b) Create a class by name Student with instance variables such as roll_no, name, year_of_study, branch, section, and marks in any five subjects. The class should also contain one method for calculating the percentage of marks and the other method for printing a report as follows:

Roll No.	Name	Year	Section	Branch	M1	M2	M3	M4	M5	Percentage
101	Abc	I	A	CSE	58	68	95	47	56	64.8

- b) Write a python script to display following shapes using turtle.

Course Outcomes:

At the end of the course, students will be able to

1. Understand problem solving techniques and their applications
2. Understand the syntax and semantics of python.
3. Demonstrate the use of Python lists and dictionaries.
4. Demonstrate the use of Python File processing, directories.
5. Describe and apply object-oriented programming methodology and Standard Library.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech I Year I Semester

20CHE201 CHEMISTRY LABORATORY

L	T	P	C
0	0	3	1.5

Pre-requisite Basic Chemistry at Intermediate or equivalent level.

Course Description:

It deals with basic principles of volumetric and instrumental analytical methods.

Course Objectives:

This Engineering Chemistry Laboratory is common to all branches of I Year B Tech. At the end of the course the student is expected to Students will

1. Learn to estimate the chemical impurities present in water such as hardness, alkalinity, chlorine, etc.
2. Understand and experience the formation of inorganic complex and analytical technique for trace metal determination.
3. Be trained to use the instruments to practically understand the concepts of electrochemistry.
4. Bridge theoretical concepts and their practical engineering applications, thus
5. highlighting the role of chemistry in engineering.

LIST OF EXPERIMENTS

1. Estimation of total, permanent and temporary hardness of water by EDTA method.
2. Estimation of alkalinity of water sample.
3. Estimation of dissolved oxygen by Winkler's method.
4. Determination of molecular weight of a polymer by using Ostwald's viscometer.
5. Determination of rate constant of an ester hydrolysis (Pseudo First Order reaction).
6. Determination of strength of a Strong acid (conc. H_2SO_4) by conductometric titration (Neutralisation Titration).
7. Conductometric titration of $BaCl_2$ Vs Na_2SO_4 (Precipitation Titration).
8. Dissociation constant of weak electrolyte by Conductometry.
9. Determination of percentage of Iron in Cement sample by colorimetry.
10. Estimation of ferrous ion by Potentiometric titration (Redox Titration).
11. Saponification value of oil.
12. Formation of Iron-1,10-phenanthroline complex and determination of iron by colorimetry.

Course Outcomes:

After the completion of the Engineering Chemistry Laboratory experiments, students will be able to

1. Develop and perform analytical chemistry techniques to address the water related problems (for e.g., hardness, alkalinity present in water) technically.
2. Handle electro-analytical instruments like digital conductivity meter and potentiometer to perform neutralization, precipitation, and redox titrations, respectively.
3. Acquire practical skills to handle spectro-photochemical methods to verify Beer Lambert's Law.
4. Operate various instruments for the analysis of materials and produce accurate results in a given time frame.
5. Think innovatively and improve the creative skills that are essential for solving engineering problems.

Dept. of Computer Science & Engineering (IoT)

Textbook:

1. Engineering Chemistry Lab Manual (2017-18), Dept. of Chemistry, Madanapalle Institute of Technology and Science, Madanapalle – 517325, Chittoor Dist., Andhra Pradesh, India.
2. “Vogel’s Textbook of Qualitative Chemical Analysis”, Arthur Israel Vogel, Prentice Hall, 2000.
3. Laboratory Manual on Engineering Chemistry, by Dr Sudha Rani, Dhanpat Rai Publishing house, 2009.
4. A Textbook on Experiments and calculations in Engineering Chemistry, by SS Dara, S Chand publications, 2015.
5. Laboratory Manual of Organic Chemistry, by Raj K Bansal, Wiley Eastern Limited, New age international limited, 2009.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech I Year I Semester

20CSE202 ENGINEERING AND IT WORKSHOP

L	T	P	C
0	0	3	1.5

Prerequisite: None

Course Description:

This course will provide students with a hands-on experience on various basic engineering practices CSE and presenting the final product design.

Course Objectives:

1. Introduction to the use of Tools and Machinery in foundry, forging, tinsmith, carpentry, welding, fitting, working, fabrication of plastic components, fabrication of polymer composite materials, simple machine turning and wood turning, basic electrical connections.
2. Introduction of basic electrical engineering.
3. Fabrication of final product design at end of the semester.

LIST OF EXPERIMENTS

1. Carpentry (Cross half lap Joint and Miter Joint)
2. Fitting (Square and 'V' fit)
3. Sheet Metal - Tin smithy (Square tray)
4. Foundry (Solid and Split pattern)
5. Welding (Arc and Gas welding) – Single V Butt Joint, T-fillet Joint
6. Plastic fabrication (Pen Stand)
7. Metrology (Internal and External dimension)
8. Introduction of Power Tools and CNC (Demo Only)
9. Introduction to 3D Printing (Demo Only)

Course Outcomes:

On successful completion of this course, the student will be able to

1. Fabricate carpentry components with suitable joint and pipe connections including plumbing works.
2. Practice the welding equipment to join the structures
3. Effective the basic machining operations
4. Create the models using sheet metal and plastic works.
5. Illustrate the operations of foundry, fitting and smithy
6. Fabrication product in composite material and product in plastic material
7. Conduct experiment basic electrical wire connection
8. Design and fabrication of final product design

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Suggested Text/Reference Books:

1. Hajra Choudhury S.K., Hajra Choudhury A.K. and Nirjhar Roy S.K., "Elements of Workshop Technology", Vol. I 2008 and Vol. II 2010, Media promoters and publishers private limited, Mumbai.

3. Gowri P. Hariharan and A. Suresh Babu, “Manufacturing Technology – 1” Pearson Education, 2008.
4. Roy A. Lindberg, “Processes and Materials of Manufacture”, 4th edition, Prentice Hall India, 1998. (v) Rao P.N., “Manufacturing Technology”, Vol. I and Vol. II, Tata McGraw Hill House, 2017.

IT WORKSHOP

Prerequisite: None

Course Description:

This course helps the students to understand the basic components of a computer, installation of operating systems, working on office productivity tools word-processor, spreadsheet and presentation slides. Also it gives a basic understanding of using Google tools and various email settings in Gmail.

Course Objectives:

1. The course focuses on enhancing student knowledge in computer peripherals and assembling.
2. To install operating system on computers and create new email account.
3. To understand basic software utilities like compression tools, PDF readers and web browser.
4. To provide technical training to the students on software tools like online forms, calendar applications, online drive, online translation tools and image processing applications.
5. To make the students to install software like Integrated Development Environments (IDE), and compilers for different programming languages.

LIST OF EXPERIMENTS

1. Components of Computer & Assembling a Computer: Learning about the different parts of the computer and its advancement
 - Processor
 - Memory – Types
 - Motherboard
 - Peripheral interfaces – I/O devices
 - Learn about the proper connectivity among the devices inside the PC
 - Assembling the different parts of the computer inside the cabinet
2. Install Operating System
 - Partition the disk drive based on the capacity and the OS to be installed.
 - Install ReactOS/Windows
 - Install Ubuntu or any other GNU/Linux
 - Install VirtualBox or VMWare or QEMU
3. Basic PC Troubleshooting
 - Awareness on the possible issues in a computer
 - Troubleshooting the problems using the available tools
 - Removal and repair of existing software

Dept. of Computer Science & Engineering (IoT)

- Identification of suitable Device driver for Hardware Devices.
4. Learning Basic Software:
 - Installation of simple Productivity tools like file and folder compression utilities and PDF readers.
 - Installation of Image Editor and Web browsers.
 - Basic Software installation in GNU Linux based system.
 - Connect the Printer and Scanner Devices perform printing and scanning operation.
 5. Office Productivity Tools:
 - Generate, manipulate, search, aligning content using word processing applications.
 - Creation of spreadsheet with various column and rows applying various formulas on cells.
 - Create Presentation and Visualization – graphs, charts, 2D, 3D.
 - Create a database template using Libreoffice Base, OpenOffice Base or MS Access.
 - Draw flowchart using the Drawing tools – Google Quick draw, sketch up,
 6. Introduction to Google Tools
 - Design a Google form and collect a response data among students using Google Form.
 - Schedule One day of your activities using Google Calendar.
 - Store and Retrieve Data from cloud storage using Google Drive.
 - Translate the English language sentence to Telugu sentence using Google Translate
 - Organizing photo and editing photo using Google Photos.
 7. Exploring Email
 - Creation, Composing and Sending the E-mail.
 - Use High Priority setting to categories the mail.
 - Create a Folder in different Categories and move the received mail to Folder.
 - Unsubscribing unwanted emails
 - Enable settings for automatic reply

Add on content:

- Networking Commands: ping, ssh, ifconfig, scp, ipconfig, traceroute, nslookup, getmac

Technical Stack: GNU Linux, Windows/ReactOS-Compression Utilities, PDF reader, Office Package.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Attain complete knowledge of a computer hardware
2. Install Operating Systems and troubleshooting using Utility software.
3. Able to do document task through office productivity software.
4. Attain technically strong usage of Google Tools and Email handling.
5. Able to install basic computer engineering software.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Dept. of Computer Science & Engineering (IoT)

I Year II Semester

B. Tech I Year II Semester

20MAT110 LINEAR ALGEBRA

L T P C
3 0 0 3

Pre-requisite: 20MAT101

Course Description:

Linear algebra has widespread applications in engineering and science. In this course, various methods of solving system of linear equations, as applicable in the information technology and electrical circuits are highlighted. The concept of reduction of number of variables in systems has been introduced and effect of change of basis from the view point of computer graphics has been explained. Finally, basics involved in search engine operations by orthogonalisation and least squares optimization have been explained.

Course Objectives:

1. Understanding basic concepts of linear algebra (systems of linear equations, matrix calculus, vectors and basic vector operations).
2. Learn about vector spaces and subspaces.
3. To become proficient in solving computational problems of linear algebra.
4. To understand the axiomatic structure of modern mathematics and learn to construct simple proof.
5. To gain basic knowledge of search engine operations and optimization path.

UNIT I LINEAR EQUATIONS AND MATRICES

9 hours

System of linear equations, Gaussian elimination, Gauss-Jordan method, LU and LDU factorization, block matrices, inverse of matrices, elementary matrices, permutation matrix, Eigen value and Eigen vectors, Cayley -Hamilton Theorem (without proof), applications to cryptography and electrical network.

UNIT II VECTOR SPACE

9 hours

The n -space R^n and vector space, subspaces, bases, linear combination, span, linear independence, dimensions, finite dimensional, Row and column spaces, Rank and nullity, Bases for subspace, invertibility, application in interpolation.

UNIT III LINEAR TRANSFORMATIONS

9 hours

Basic Properties of Linear transformations, invertible linear transformation, matrices of linear transformations.

UNIT IV VECTOR SPACE OF LINEAR TRANSFORMATIONS

9 hours

Vector space of linear transformations, change of bases, similarity, application to computer graphics.

UNIT V INNER PRODUCT SPACES

9 hours

Dot Products and Inner products, the lengths and angles of vectors, matrix representations of inner products, Gram-Schmidt orthogonalisation, orthogonal projections, relations of fundamental subspaces, orthogonal matrices and isometrics, singular value decomposition (SVD), applications to least square solutions.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, the students should be able to:

1. Solve systems of linear equations using Gaussian elimination and matrix inversion.
2. Understand the concepts of vector space and subspace, linear independence and use them in network systems. Apply principles of matrix algebra to linear transformations in solving engineering problems.
3. Use the concepts of similarity of transformations in computer graphics.
4. Demonstrate understanding of inner products, associated norms and interlink to search operations on network.

Text Books:

1. Jin Ho Kwak and Sungpyo Hong, "Linear Algebra", Second edition, Birkhäuser, 2004.

Reference Books:

1. Stephen Andrilli and David Hecher, Elementary Linear Algebra, 3rd Edition, Academic Press (2006).
2. Charles W. Curtis, Linear Algebra, Springer (2004).
3. Howard Anton and Robert C Busby, Contemporary linear algebra, John Wiley (2003).
4. Gilbert Strang, Introduction to Linear Algebra.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

B. Tech I Year II Semester

20PHY102 APPLIED PHYSICS

L T P C
3 1 0 4

Pre-requisite: Plus two level physics course

Course Description:

Applied Physics for Electrical, Electronics and Computer Engineers is a basic physics course which provides fundamental knowledge to understand the concepts of Waves, Optics, Quantum Mechanics, Semiconductors, Lasers and Fiber Optics.

Course Objectives:

1. Expose students in understanding the basic laws of nature through wave equation using the principles of oscillations and waves.
2. Analyze and understand the concepts of waves and optics to prepare the students for advanced level courses.
3. Expose students to theoretical and mathematical aspects of Interference, Diffraction techniques, Polarization and Lasers for testing of materials.
4. Develop knowledge and understanding the fundamental concepts of Quantum mechanics, Semiconductors and Fiber Optics.
5. Adaptability to new developments in science and technology.

UNIT I WAVES AND OSCILLATIONS

11 hours

Simple harmonic motion, damped harmonic oscillations, forced harmonic oscillations, resonance, and quality factor. Superposition of vibrations along same direction (equal frequency) and in perpendicular directions, Lissajous figures.

Transverse waves, one dimensional wave equation, solution for wave equation, velocity of a transverse wave along a stretched string, modes of vibration of stretched string, reflection and transmission waves at boundary, standing waves, standing wave ratio.

UNIT II OPTICS

13 hours

Superposition of waves, interference of light by division of wavefront - Young's double slit experiment, interference of light by division of amplitude- interference in thin film by reflection, Newton's rings experiment.

Diffraction, Farunhofer diffraction due to single slit, double slit and Diffraction grating (Nslit). Polarization, Types of polarization, Polarization by reflection, refraction and double refraction, Nicol's prism. Half wave and Quarter wave plates.

UNIT III QUANTUM MECHANICS

12 hours

De Broglie's hypothesis, Uncertainty principle (Qualitative only), Postulates of quantum mechanics, Time-dependent and time-independent Schrodinger equations for wave function, Free-particle wave function and wave-packets (group velocity & phase velocity), Solution of wave equation: Solution of stationary-state, Schrodinger equation for one dimensional problems – particle in a box, Scattering from a potential barrier and principle of tunnelling- operation of scanning tunnelling microscope.

UNIT IV FREE ELECTRON THEORY & SEMICONDUCTORS

12 hours

Free electron theory of metals (drift velocity and electrical conductivity), Fermi energy level, density of states, Kronig-Penney model (Qualitative only) and origin of energy bands, band structure of metals, semiconductors, and insulators. Direct and indirect bandgap semiconductors, Intrinsic and extrinsic semiconductors, Dependence of Fermi level on carrier concentration and temperature (equilibrium carrier statistics), Drift and Diffusion Current, Hall effect.

UNIT V LASERS & FIBER OPTICS

12 hours

Introduction to lasers, characteristics of laser, spontaneous and stimulated emission, Einstein's coefficients; population inversion, excitation mechanisms, solid-state lasers – ruby laser, gas Lasers - He-Ne Laser, applications of lasers.

Fiber Optics: Principle, Construction and working of optical fiber, Acceptance angle, Numerical aperture, Types of fiber, Fiber optic communication system.

Course Outcomes:

Upon successful completion of this course, the students should be able to:

1. Describe a mathematical wave equation using the principles of waves and oscillations
2. Apply the knowledge for materials testing using Interference, Diffraction & Polarization techniques.
3. Understand the idea of wave function and to solve Schrodinger equation for simple potentials.
4. Explain the role of semiconductors in different realms of physics and their applications in both science and technology.
5. Acquire the basic knowledge of lasers and fiber optics.

Text Books:

1. Engineering Physics –Dr. M.N. Avadhanulu & Dr. P.G. Kshirsagar, S. Chand and Company
2. Engineering Physics –K. Thyagarajan, McGraw Hill Publishers.

Reference Books:

1. H. J. Pain, “The physics of vibrations and waves”, Wiley, 2006.
2. Physics Vol I & II, Halliday/Resnick/Krane 5th Edition, John Wiley, 2003.
3. B.G. Streetman, “Solid State Electronic Devices”, Prentice Hall of India, 1995.
4. Concepts of Modern Physics by Arthur Beiser, 7th Edition, 2017.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

B. Tech I Year II Semester

20EEE101 BASIC ELECTRICAL ENGINEERING

L T P C
3 1 0 4

Pre-requisite: Intermediate Physics

Course Description:

This course equips the students with a basic understanding of Electrical circuits and machines for specific applications. In specific, the course covers basic of DC circuit & its analysis, introduction to single-phase and three-phase AC Systems, magnetic materials, transformers, DC & AC electrical machines, basic converters and Components of LT Switchgear.

Course Objectives:

1. To learn the basics of the D.C. circuit analysis.
2. To have an idea about single-phase and three-phase A.C. electrical circuits.
3. To gain knowledge about basic magnetic material and transformers.
4. To learn the construction and operation of D.C. and A.C. machines.
5. To understand the operation of basic rectifiers and various components of LT Switchgear.

UNIT I DC CIRCUIT ANALYSIS

12 hours

Electrical circuit elements, voltage and current sources, Series and parallel resistive circuits, Kirchhoff's current and voltage laws, Nodal and Mesh analysis of simple circuits with dc excitation. Source Transformation, Star-Delta Transformation, Superposition Theorem.

UNIT II AC CIRCUIT ANALYSIS

12 hours

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations. Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT III MAGNETIC MATERIALS AND TRANSFORMERS

12 hours

Magnetic materials, B-H characteristics, ideal and practical transformer, principle of operation, emf equation, equivalent circuit, losses in transformers, regulation and efficiency.

UNIT IV DC AND AC MACHINES

12 hours

Construction, working, emf equation of DC generator, methods of excitation, speed control of dc motor. Introduction to different types of AC motors, Three Phase Induction Motors - Generation of rotating magnetic fields, construction, working and starting methods: D.O.L, Autotransformer starter. Introduction to Alternators.

UNIT V RECTIFIERS AND ELECTRICAL INSTALLATIONS

12 hours

PN junction diode, half wave, full wave and bridge rectifiers. Components of LT Switchgear: switch fuse unit (SFU), MCB, ELCB, MCCB, types of wires and cables – Current carrying capability, Insulation Strength; Earthing.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. To understand and analyze basic DC electric circuits.
2. To measure and analyze various electrical quantities of single phase and three AC electric circuits.
3. To understand magnetic materials and to analyze the transformers.
4. To study the working principles of electrical machines.
5. To create power converters for domestic applications with LT switchgear.

2. J.B. Gupta, “Theory & Performance of Electrical Machines”, S. K. Kataria & Sons, 2013.
3. John Bird, “Electrical Circuit Theory and Technology”, Fourth edition, Elsevier Ltd., 2010.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech I Year II Semester

20CSE102 C PROGRAMMING AND DATA STRUCTURES

L T P C
3 0 0 3

Pre-requisite: 20CSE101

Course Description:

This course includes C program basics, control structures, arrays, files, pointers and data structures.

Course Objectives:

1. To make the student understand fundamentals of C programming language and problem solving.
2. To understand the syntax and semantics of C programming language.
3. To develop algorithms for sorting, searching techniques.
4. To design and implement operations on stack, queue, and linked list.

UNIT I INTRODUCTION TO C PROGRAMMING

9 hours

Structure of C Program, C Tokens: Variables, Data types, Constants, Identifiers, key words and Operators, Expressions.

Control Structures: Conditional Statements (Simple if, if-else, Nested -if-else, Switch). Iterative Statements (for, While, Do-While), Jump Statements (break, Continue).

UNIT II FUNCTIONS & ARRAY

9 hours

Functions Introduction, User defined function, Function prototype, Function Definition and Function Call, Storage classes, Recursion **Arrays:** Defining an array, processing an array, one dimensional arrays, two dimensional arrays. Passing array as an argument to function. **Sorting:** Bubble Sort, Insertion Sort, selection sort. **Searching:** Linear and binary search.

UNIT III STRINGS & POINTERS

9 hours

Strings: Declaring and defining a string, Initialization of strings, Strings Library functions.

Pointers: Fundamentals of pointer, Pointer Declarations, Parameter passing: Pass by value, Pass by reference, Dynamic memory allocation.

UNIT IV STRUCTURES & FILES

9 hours

Structures: Defining a structure, processing a structure, Pointer to Structure, Unions.

Files: Opening and closing a data file, Reading and Writing a data file, File I/O Functions.

UNIT V DATA STRUCTURES

12 hours

Stack: stack operations, stack implementations using arrays.

Queue: queue operations, queue implementations using array, Applications of stack and queue.

Linked List: Single linked list operations.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand fundamentals of C programming language and its constructs.
2. Design and implement applications using functions, arrays, sorting and searching techniques.
3. Design and implement applications using strings and pointers.
4. Design and implement applications using structures and File processing.
5. Choose appropriate linear data structure depending on the problem to be solved.

B. Tech I Year II Semester

20ENG201 ENGLISH FOR PROFESSIONAL PURPOSES LABORATORY
(Common to all branches)

L	T	P	C
0	0	2	1

Pre-requisite: None

Course Description:

English language communication is a social phenomenon and students need to be able to function in the society at large as the communicators before entering the professional world. The present course equips the students with the basic functions of English language communication, which are required not only in their day-to-day lives but also profoundly significant for their future professional, academic training and their careers in the industry. The course mainly focuses on the achievement of communicative proficiency of the students coupled with the necessary linguistic inputs.

Course Objectives:

This course enables the student to –

1. Get aquatinted with the basic communicative functions.
2. Engage effectively in learning various functions of English language communication.
3. Enhance their narration abilities in past experiences and future plans and goals/events.
4. Develop their abilities in expressing opinion.
5. Provide speaking practice in speech.

Course contents:

Greeting and Introductions (L & S)

- Greeting on different occasions and responding to greetings (L & S)
- Wishing on various occasions, taking leave and saying goodbye (L & S)
- Introducing oneself and others (L & S)
- Asking for introduction and responding to introduction (L & S)
- Developing a short personal profile (R &W)

Describing: (L, S, R & W)

- Using adjectives (Vocab)
- Degrees of comparison (Grammar)
- Common words, phrases, and expressions used for description (Vocab)
- Describing people, places and objects (L, S, R & W)
- Reading and writing descriptive paragraphs (R &W)

Narrating (L, S, R & W)

- Talking about past experiences and events (L & S)
- Talking about memorable incidents or events (L & S)
- Techniques of narration and narrative tenses (Grammar)
- Composing and narrating a story (R &W)

Planning and Predicting (L, S, R & W)

- Talking about future events (L & S)
- Making promises and giving assurances (L & S)
- Predicting future events (L & S)

Dept. of Computer Science & Engineering (IoT)

- Writing and organising a short plan of an event (**R &W**)

Instructions and directions (L, S, R & W)

- Forming imperative sentences (Grammar)
- Reading and writing short instruction manuals (**R &W**)
- Writing a recipe/ procedure (**R &W**)
- Giving directions

Enquiring: (L, S, R & W)

- Open and closed ended questions (**Grammar**)
- Asking for information and giving information (**L & S**)
- Telephonic enquiry (**L & S**)
- Official enquiries through emails and letters (**R &W**)

Requesting: (L, S, R & W)

- Polite expressions
- Modal verbs and key phrases for requesting (**Grammar and vocab**)
- Official requests through emails and letters (**R &W**)

Comparing and contrasting: (L, S, R & W)

- Words and phrases used for comparison and contrast (**Vocab**)
- Comparing qualities/properties/quantities of people, places and objects (**L & S**)
- Composing comparison and contrast paragraphs (**R &W**)

Expressing opinion: (L, S, R & W)

- Language expressions used for expressing opinions (**Vocab**)
- Developing opinion based paragraphs (**R &W**)
- Discourse markers and linkers used in opinion based paragraphs (**R &W**)

Public Speaking: (L, S, R & W)

- Techniques and strategies required for public speaking (**L & S**)
- Developing and organising a short speech (**R &W**)
- Presentation skills required for public speaking (**L & S**)

Course Outcomes:

At the end of the course, students will be able to

1. Develop their confidence while giving introduction, describing a place, & giving directions. (3,4,5)
2. Use various functions of English like asking for & giving information, inviting people for events/occasions, & requesting people. (3,4,5)
3. Narrate the past experiences and events in speaking and writing (3,4,5)
4. Express their views and opinions logically and appropriately in spoken and written format. (3,4,5,6)
5. Deliver logically organized speeches and present them without hesitations. (3,4,5, 6)

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech I Year II Semester

20PHY201 PHYSICS LABORATORY

L	T	P	C
0	0	3	1.5

Course Description:

Physics Practical course is meant for making the students to gain practical knowledge to co relate with the theoretical studies. It covers experiments on Principles of Mechanics and Optics, Measurement of Magnetic field and studying Resonance using LCR Circuit.

Course Objectives:

1. Elucidate the concepts of Physics through involvement in the experiment by applying theoretical knowledge.
2. Illustrate the basics of mechanics, waves and optics to analyze the behavior and characteristics of various materials for its optimum utilization.
3. Develop an ability to apply the knowledge of physics experiments in the later studies.

LIST OF EXPERIMENTS:

{Out of 17 experiments any 12 experiments (minimum 10) must be performed in a semester}

1. Spring constant - Coupled Pendulums.
2. Study of resonance effect in series and parallel LCR circuit.
3. Determination of radius of curvature of a curved surface - Newton's Rings.
4. Wavelength of a laser - Diffraction Grating
5. Wavelength of the spectral lines - Diffraction Grating.
6. Magnetic field along the axis of a current carrying coil - Stewart Gees' Apparatus
7. Thickness of a given wire - Wedge Method.
8. Dispersive power of prism – Spectrometer.
9. Frequency of the tuning fork - Melde's apparatus.
10. Determination of particle size using Laser.
11. Width of single slit - Diffraction due to Single Slit.
12. Torsional Pendulum.
13. Determination of the numerical aperture of a given optical fiber and hence to find its acceptance angle.
14. Measurement of e/m of electron (Thomson's method)
15. Energy gap of a material of p-n junction.
16. Determination of Planck's constant.
17. Ferroelectric hysteresis (B-H Curve).

Course Outcomes:

Upon successful completion of this course, the students should be able to:

1. Apply the scientific process in the conduct and reporting of experimental investigations.
2. Understand measurement technology, usage of new instruments and real time applications in engineering studies.
3. Verify the theoretical ideas and concepts covered in lecture by doing hands on in the experiments.
4. Know about the characteristics of various materials in a practical manner and gain knowledge about various optical technique methods.
5. Acquire and interpret experimental data to examine the physical laws.

4. Engineering Mechanics, 2nd ed. — MK Harbola.
5. Introduction to Electrodynamics- David J Griffiths.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech I Year II Semester

20EEE201 ELECTRICAL ENGINEERING LABORATORY

L	T	P	C
0	0	3	1.5

Prerequisite: None

Course Description:

The laboratory facilitates the students to deal with electrical instruments, which further strengthen the concepts & operation of various AC & DC circuits, and machines, and their characteristics. The lab also reinforce the concepts discussed in class with a hands-on approach which enable the students to gain significant experience with electrical instruments such as ammeter, voltmeter, digital multimeter, oscilloscopes, tachometer, switches, fuses and power supplies.

Course Objectives:

1. To provide hands on experience in setting up simple electrical circuits (DC and AC).
2. To get exposure to handle different electrical equipment's.
3. To measure various electrical parameters with different measuring instruments.
4. To get hands on experience in operating DC and AC machines.
5. To understand the operation of basic converters and various components of LT Switchgear..

LIST OF LABORATORY EXPERIMENTS/DEMONSTRATIONS:

DEMONSTRATIONS:

1. Basic safety precautions. Introduction and use of measuring instruments – voltmeter, ammeter, wattmeter, multi-meter, oscilloscope. Study of passive components - resistors, capacitors and inductors.
2. Demonstration of voltage and current relationships (line-line voltage, phase-to-neutral voltage, line and phase currents). In star and delta connections.
3. Demonstration of cut-out sections of transformer and DC & AC machines.
4. Demonstration of induction machine. Motor operation and generator operation of an induction machine driven at super-synchronous speed.
5. Wavelength of the spectral lines - Diffraction Grating.
6. Familiarization of (i) different types of cables/wires and switches and their uses, (ii) different types of fuses & fuse carriers; MCB, ELCB, MCCB their ratings and uses (components of LT switchgear).

EXPERIMENTS:

1. Wiring of a simple circuit for controlling (1) a lamp/fan point, (2) Staircase or Corridor Winding.
2. Wiring of a power circuit for controlling an electrical appliance (16A Socket).
3. Verification of Kirchoff's current and voltage laws (KCL & KVL).
4. Verification of superposition theorem
5. Sinusoidal steady state response of R-L, and R-C circuits (impedance calculation and verification).
6. Measurement of voltage, current and power in a single-phase circuit using voltmeter, ammeter and wattmeter. Also, calculate the power factor of the circuit.
7. Measurement of voltage, current and power in a single-phase circuit using voltmeter, ammeter and wattmeter. Also, calculate the power factor of the circuit.

Dept. of Computer Science & Engineering (IoT)

8. Open-circuit and short-circuit test on a single-phase transformer.
10. Wiring of a power distribution arrangement using single-phase MCB distribution board with ELCB, main switch and energy meter (or residential house wiring).
11. Regulated power supply for generating a constant DC Voltage.
12. Fabrication of a given electronic circuit on a PCB and test the same.

Course Outcomes:

Upon successful completion of the course, the students are expected to

1. Get an exposure to common electrical components and their ratings.
2. Make electrical connections by wires of appropriate ratings.
3. Understand the usage of common electrical measuring instruments.
4. Understand the basic characteristics of transformers and electrical machines.
5. Get an exposure to the working of various power electronic converters.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Dept. of Computer Science & Engineering (IoT)

B. Tech I Year II Semester

20CSE201 C PROGRAMMING AND DATA STRUCTURES LABORATORY

L	T	P	C
0	0	3	1.5

Prerequisite: 20CSE101

Course Description:

This course includes C program basics, control structures, arrays, files, pointers and data structures.

Course Objectives:

1. To make the student understand fundamentals of C programming language and problem solving.
2. To get hands-on practices with the syntax and semantics of C programming language.
3. To develop algorithms for sorting, searching techniques.
4. To design and implement operations on stacks, queues, and linked lists.

LIST OF EXPERIMENTS

1. a) Write a C program to swap the two numbers.
b) Write a C Program to find the eligibility of admission for a Professional course based on the following criteria:
 - i. Marks in Maths ≥ 65
 - ii. Marks in Physics ≥ 55
 - iii. Marks in Chemistry ≥ 50OR
iv. Total in all three subject ≥ 180
2. a) Write a C program to compute the factorial of a given number.
b) Write a program that reads numbers which are in the range 0 to 100, till it encounters -1. Print the sum of all the integers that you have read before you encountered -1.
3. a) Write a C program to accept a coordinate point in a XY coordinate system and determine in which quadrant the coordinate point lies.
b) The digital root (also called repeated digital sum) of a number is a single digit value obtained by an iterative process of summing digits. Digital sum of 65536 is 7, because $6+5+5+3+6=25$ and $2+5=7$. Write a program that takes an integer as input and prints its digital root.
4. a) Write a C program to find the series of prime numbers in the given range.
b) Write a C program to generate Tribonacci numbers in the given range.
5. a) Write a C program to find sum of digits, Decimal to Binary conversion, reversal of numbers using functions.
b) Write a C program to find Factorial, Greatest Common Divisor, and Fibonacci using recursion.
6. Your program should take as input: dimension of a square matrix N, two matrices of size N x N with integer values, and one operator symbol (+, -, *, /). It must perform the corresponding operation given below;
 - a) Matrix Addition
 - b) Matrix Subtraction
 - c) Matrix Multiplication
7. Implement the following sorting techniques.
 - a) Bubble sort
 - b) Insertion sort
 - c) Selection sort.
8. Implement the following searching techniques.
 - a) Linear Search
 - b) Binary Search

Dept. of Computer Science & Engineering (IoT)

9. a) Write a program in C to find the frequency of characters in a string.
b) Write a C program to implement all string operations (string length, string copy, string compare, string concatenation and string reverse) without using string library functions.
10. a) Write a C program to get N elements in an array and sort it using Pointer.
b) Write a C program to swap two integers using pass by reference.
c) Write a C program to find the largest element using Dynamic Memory Allocation.
11. a) Write a program in C to count the number of vowels, consonants, digits, special symbols, words in a string using a pointer.
b) Write a C program to print all permutations of a given string using pointers.
12. a) Write a C program to add two distances in the inch-feet system using structures.
b) Write a C program to calculate difference between Two Time Periods (in *Hours, Minutes, Seconds* format) using structures.
13. Develop an application to match parenthesis of a given expression using Stack.
14. Develop an application to identify Palindrome string using Stack and Queue.
15. Develop an application to add two Polynomial equations using Linked List.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand fundamentals of C programming language and its constructs.
2. Design applications using functions, arrays, sorting and searching techniques.
3. Design and implement solutions using strings and pointers.
4. Design and develop solutions using structures and File processing.
5. Design and develop applications on stack, queue, and linked list depending on the problems to be solved.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

II Year I Semester

B. Tech II Year I Semester

20MAT111 PROBABILITY AND STATISTICS FOR COMPUTER SCIENCE

L T P C
3 0 0 3

Pre-requisite 20MAT101

Course Description:

This course provides an introduction to probability, distributions and statistics with applications. Topics include: Conditional probability, Random variables, Probability distributions, Joint densities, Bayesian inference, descriptive statistics, Correlation and Regression, Estimation, Confidence intervals, Hypothesis testing.

Course Objectives:

The objectives of this course are

1. To extend and formalize knowledge of the theory of probability and random variables.
2. To solve real time problems in engineering and science by using discrete and continuous distributions
3. To analyze and interpret basic summary and modeling techniques for Multi-variate data
4. To analyze the data by using descriptive statistics for decision making
5. To apply the statistical inference involving confidence interval and hypothesis testing in data analysis.

UNIT I PROBABILITY

9 hours

Introduction to Probability, Sample space and events, axioms of probability, theorems on probability, conditional probability, multiplication theorem and independence of events, Baye's theorem.

Random variables (discrete and continuous), probability density functions, distribution function, mathematical expectation, properties. moment generating function.

UNIT II PROBABILITY DISTRIBUTIONS

9 hours

Discrete probability distributions - Binomial, Poisson, Geometric and their properties

Continuous probability distributions - Uniform, Exponential, Gamma, Normal distributions and their properties, Chebychev's inequality.

UNIT III JOINT DISTRIBUTIONS

9 hours

Joint densities and Independence - Marginal distributions (discrete & continuous)- Expectation and Covariance, Correlation, Conditional densities and Regression, Curves of regression, Transformation of random variables.

UNIT IV STATISTICS FOR DATA ANALYSIS

9 hours

Data Visualization, Moments, skewness, kurtosis, correlation, correlation coefficient, rank correlation, principle of least squares, lines of regression, regression coefficients and their properties.

UNIT V STATISTICAL INFERENCE

9 hours

Population, sampling, formulation of null hypothesis, alternative hypothesis, level of significance, types of errors and power of the test. Large Sample Tests: Test for single mean, single proportion, difference of means, difference of proportions, Confidence interval for parameters in one sample and two sample problems, t test for single mean, difference of means, test for ratio of variances.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand the probability concepts and their importance in engineering.
2. Apply discrete and continuous probability distributions to solve various engineering problems.
3. Get an idea about joint density functions, distribution functions to the random variables and analyse the multivariate problems in engineering
4. Apply the method of least squares to estimate the parameters of a regression model.
5. Perform Test of Hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year I Semester

20CSO103 REAL TIME OPERATING SYSTEMS

L T P C
3 0 0 3

Pre-requisite NIL

Course Description:

This course covers the principles of real-time systems, Modeling of a Real-Time System, Task assignment and scheduling, Resource management, Real-time operating systems, RTOS services, Programming language with real-time support, System design techniques, Inter task communication, Fault tolerant techniques, Reliability evaluation methods; Performance analysis

Course Objectives:

1. To provide knowledge on Real Time operating system concepts.
2. To develop an understanding of various Real Time systems Application
3. To learn about RTOS concepts on multitasking and inter-process communication
4. To learn the basics of RTOS Scheduling and resource sharing.

UNIT I REAL TIME SYSTEMS

9 hours

Introduction- Issues in real time computing- Structure of a real time system- Task classes- Performance measures for real time systems- Task assignment and scheduling algorithms - Mode changes- Fault tolerant scheduling - Real Time Models.

UNIT II μ C/OS- II RTOS CONCEPTS

9 hours

Foreground/Background process- Resources - Tasks - Multitasking -Priorities - Schedulers -Kernel - Exclusion - Inter task communication-Interrupts - Clock ticks - μ C/OS- II Kernel structure - μ C/OS- II -Initialisation - Starting μ C/OS- II.

UNIT III μ C/OS- II RTOS FUNCTIONS

9 hours

Task Management - Time management - Semaphore management - Mutual exclusion semaphore – Event Management –Message management - Memory management - Porting μ C/OS- II – Comparison and Study of Various RTOS like QNX- VX Works-PSOS.

UNIT IV REAL TIME SCHEDULING

9 hours

Common Approaches to Real Time Scheduling: Clock Driven Approach, Weighted Round Robin Approach, Priority Driven Approach, Dynamic Versus Static Systems, Optimality of Effective-Deadline-First (EDF) and Least-Slack-Time-First (LST) Algorithms, Rate Monotonic Algorithm, Offline Versus Online Scheduling, Scheduling Aperiodic and Sporadic jobs in Priority Driven and Clock Driven Systems.

UNIT V RESOURCES SHARING

9 hours

Effect of Resource Contention and Resource Access Control (RAC), Non-preemptive Critical Sections, Basic Priority-Inheritance and Priority-Ceiling Protocols, Stack Based Priority- Ceiling Protocol, Use of Priority-Ceiling Protocol in Dynamic Priority Systems, Preemption Ceiling Protocol, Access Control in Multiple-Module Resources, Controlling Concurrent Accesses to Data Objects.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand concepts of Real-Time systems and modeling.
2. Recognize the characteristics of a real-time system.
3. Understand and develop document on an architectural design of a real-time system
4. Develop and document Task scheduling, resource management, real-time operating systems and fault tolerant applications of Real-Time Systems
5. Able to get a broad understanding of the technologies and applications for the emerging and exciting domain of real-time systems

Text Book(s)

1. Krishna C.M., Kang G. Shin, "Real Time Systems", Tata McGraw-Hill Edition, 2010.
2. Philip A.Laplante, "Real Time Systems Design and Analysis-An Engineers Handbook", II Edition-IEEE Press, IEEE ComputerSociety Press, 2001
- 3 Real Time Systems – Jane W. S. Liu, Pearson Education Publication

Reference Books

1. Real Time Systems – Jane W. S. Liu, Pearson Education Publication
2. Jean J Labrosse, "MicroC/OS-II The Real Time Kernel" II Edition,CMP Books, 2002
3. Real Time Systems – Mall Rajib, Pearson Education
- 4 Real-Time Systems: Scheduling, Analysis, and Verification – Albert M. K. Cheng, Wiley.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year I Semester

20CSO104 ANALOG AND DIGITAL ELECTRONICS

L T P C
3 0 0 3

Pre-requisite 20EEE101

Course Description:

The course gives an introduction to operation and design of Analog and digital circuits. It will give an basis for understanding operation and characteristics of simple of Analog electronics and digital electronic circuit elements such as diodes, BJT, FET & MOSFET, operational amplifiers and their input output characteristics and their applications. Also, this course provides detail design of logic families, boolean algebra, logic gates, combinatorial and sequential digital circuits.

Course Objectives:

1. To introduce semiconductor components such as diodes and its applications, BJT.
2. To know the FET, MOSFET, OP-AMP and their characteristics.
3. To give understanding of Applications of op amp and know digital circuits
4. To learn basic techniques for the design of combinational logic circuits digital circuits and fundamental concepts used in the design of digital systems.
5. To understand the concepts sequential circuits.

UNIT I DIODE AND BJT CIRCUITS

9 hours

P-N junction diode-diode current- diode capacitance, I-V characteristics of a diode; Zener diodes; Tunnel diodes, photo diode, LED- clamping and clipping circuits-BJT-types of configurations-input, output characteristics- small signal model, biasing circuits- fixed bias, collector to base bias – self bias - stability factor;

UNIT II FET, MOSFET AND OPERATIONAL AMPLIFIER CIRCUITS

9 hours

Introduction to FET—operation-characteristics-MOSFET structure-types -operation- drain and transfer characteristics, Introduction to operational amplifier-ideal op-amp-equivalent circuit-DC and AC characteristics-frequency response- Differential amplifier; instrumentation amplifier; differentiator; Integrator; Programmable gain amplifier

UNIT III OP AMP APPLICATIONS AND DIGITAL CIRCUITS

9 hours

Comparators-Schmitt trigger- Sample and Hold circuit -555 timer-astable operation-PWM generation-Data converters- Digital to analog converters and Analog to digital converters.

Digital Circuits: Digital (binary) operations of a system, OR gate, AND gate, NOT, EXCLUSIVE OR gate, De Morgan Laws, NAND and NOR DTL gates, modified DTL gates, HTL and TTL gates, output stages, RTL and DCTL, CMOS, Comparison of logic families.

UNIT IV COMBINATIONAL LOGIC CIRCUITS

9 hours

Basic Theorems and Properties of Boolean Algebra, Canonical and Standard Forms, Digital Logic Gates, The Map Method, Product-of-Sums Simplification, Don't-Care Conditions, NAND and NOR Implementation, Exclusive-OR Function, Binary Adder-Subtractor, Decimal Adder, Binary Multiplier, Magnitude Comparator, Decoders, Encoders, Multiplexers.

UNIT V SEQUENTIAL LOGIC CIRCUITS

9 hours

Sequential Circuits, Storage Elements: Latches and flip flops, Analysis of Clocked Sequential Circuits, State Reduction and Assignment, Shift Registers, Ripple Counters, Synchronous Counters, Random-Access Memory, Read-Only Memory.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Know the characteristics of various semiconductor devices such as PN diode, BJT.
2. Know the characteristics of various semiconductor devices such as FET, MOSFET, OPAMP.
3. Design applications of opamp and know about the logic families and realization of logic gates
4. Learn Postulates of Boolean algebra and to minimize combinational functions
5. Design and analyze combinational and sequential circuits

Text Book(s)

1. Integrated Electronics: Analog and Digital Circuits and Systems, 2/e, Jacob Millman, Christos Halkias and Chethan D. Parikh, Tata McGraw-Hill Education, India, 2010.
2. Digital Design, 5/e, Morris Mano and Michael D. Cilette, Pearson, 2011

Reference Books

1. Electronic Devices and Circuits, Jimmy J. Cathey, Schaum's outline series, 1988
2. Digital Principles, 3/e, Roger L. Tokheim, Schaum's outline series, 1994

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year I Semester

20CSO105 DATA STRUCTURES AND ALGORITHMS

L T P C
2 1 0 3

Pre-requisite **20CSE102**

Course Description:

This course is aimed to provide basic understanding of different data structures and algorithms. This course covers introduction to algorithms, basic data structures like arrays, linked lists, stacks, queues, sorting, hashing, various types of trees, graphs, hashing and their implementation.

Course Objectives:

1. To introduce the fundamental concept of data structures and to emphasize the importance of data structures in developing and implementing efficient algorithms.
2. To develop skills to choose appropriate data structure to solve real world problem
3. To implement recursive and non-recursive algorithms for different operations on data structures.

UNIT I INTRODUCTION TO ALORITHMS AND REPREENATION 9 hours
OF LINKED LIST

Introduction: What is an algorithm?, Algorithm specification, Space Complexity, Time Complexity, Orders of Growth, Worst-Case, Best-Case, and Average-Case Efficiencies, Asymptotic notations
Memory Representation: Linear and Linked Representations, Arrays, and **Linked List:** Singly Linked List and Its Operations, Doubly Linked List and its operations, Circular Lists.

UNIT II STACK & QUEUE 9 hours

Stack: Array representations, operations on stack. Applications of Stack. **Queue:** Array and linked list representations, operations on queue, applications of queue, circular queue, insertion and deletion, double ended queue.

UNIT III TREES 9 hours

Tree: Introduction, Terminology, Binary Tree, representation, Binary Tree Traversals. **Binary Search Tree:** Properties, Insertion, Deletion, and Searching operations. **Priority queue:** Definition and Applications, implementation using Heaps, Max Heap, Min Heap, Insertion into a Max Heap, Deletion from Max Heap

UNIT IV DICTIONARY AND GRAPHS 9 hours

Dictionaries: Hash Table Representation, Static and Dynamic Hashing, Collision Resolution Methods-Open Addressing, Separate Chaining, Double hashing.
Graphs: Terminology, Representation, operations, Graph Traversal techniques.

UNIT V PATTERN MATCHING AND DYNAMIC PROGRAMMING 9 hours

Pattern Matching: Pattern matching Algorithms-Brute force, the Boyer –Moore algorithm, the Knuth-Morris-Pratt algorithm.

Dynamic Programming: General method, String Editing, Longest Common Subsequence, Matrix Chain Multiplication, 0/1 Knapsack problems, The traveling sales person problem.

Backtracking: General method, N-Queens Problem, Sum of subset problem, Graph Coloring Problem.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Describe how each data structure is represented using linear and linked representations.
2. Apply stack and queue to solve real world problems
3. Demonstrate different methods for traversing trees
4. Compare various sorting and hashing techniques.
5. Develop applications using Tree and Graph data structures.

Text Book(s)

1. Cormen T.H., Leiserson, C.E., Rivest, R.L., and C. Stein. “Introduction to Algorithms, MIT Press, Second Edition (Indian reprint: Prentice-Hall).
2. Data Structures and Algorithm Analysis in C, Mark Allen Weiss, Pearson Education. Ltd., Second Edition.

Reference Books

1. Robert L. Kruse, Alexander J. Ryba, Data Structures and Program Design in C, Prentice Hall, 2ed.
2. Data Structures and Algorithms, Alfred V. Aho, John E. Hopcroft, Jeffery D.Ulman. Pearson; 1st edition
3. Data Structures, Algorithms and Applications in C by Sartaj Sahni, McGraw Hill, NY, Second Edition.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year I Semester

20CSO106 OBJECT ORIENTED PROGRAMMING - JAVA

L T P C
2 1 0 3

Pre-requisite 20CSE102

Course Description:

Basics of Object-Oriented Programming - objects, classes, polymorphism, inheritance, static and dynamic binding. Object Oriented Programming using Java-classes, interfaces, inheritance, polymorphism, method dispatch, features for encapsulation and modularity.

Course Objectives:

1. Understand object-oriented programming concepts, and apply them in solving problems.
2. Learn the principles of inheritance and polymorphism; and demonstrate how they relate to the design of abstract classes
3. To Introduce the implementation of packages and interfaces
4. Learn the concepts of exception handling and multithreading.
5. Learn the design of Graphical User Interface using applets and swing controls.

UNIT I INTRODUCTION TO OOPS CONCEPTS AND CLASSES 9 hours

Introduction to Object Oriented Programming, Java buzzwords, Java Programming Basics, Sample programs, Data types and operators, Control statements. **Classes:** Classes, Objects, Methods, Constructors, this and static keywords, Method and Constructor Overloading, Access modifiers, Polymorphism **Arrays:** One Dimensional and multi-dimensional arrays

UNIT II STRINGS, INHERITANCE, INTERFACES, AND PACKAGES 9 hours

Strings: Strings, String Handling

Inheritance: Basics, Usage of Super, Multi-level hierarchy, Method overriding, Abstract class, Final keyword.

Interfaces: Creating, Implementing, Using, Extending, and Nesting of interfaces.

Packages: Defining, Finding and Importing packages, Member Access.

UNIT III EXCEPTION HANDLING & MULTI-THREADING 9 hours

Exception Handling: Fundamentals, Types, Multiple catch clauses, Nested try blocks, Thrown Class, Using Finally and Throws, Built-in exceptions, User-defined exceptions.

Multi-threading: Thread Class, Runnable interface, creating multiple threads, life cycle of thread, thread properties, synchronization, thread communication, suspending, resuming and stopping threads.

UNIT IV I/O STREAMS AND COLLECTION FRAME WORK 9 hours
CLASSES

I/O Streams: Byte Stream Classes and Character Stream Classes.

Collection Frame work : Hierarchy of collection framework, Array-List, Linked-List, Vector, Stack, Queue, Priority Queue, Hash Set, Linked Hash Set, Tree Set.

UNIT V SWINGS 9 hours

Swing – Introduction, limitations of AWT, MVC architecture, components, containers, Event Handling- Handling mouse and keyboard events, Exploring Swing- JApplet, JFrame and JComponent, Icons and Labels, text fields, buttons – The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

Course Outcomes:

At the end of the course, students will be able to:

1. Choose object-oriented programming concepts for problem solving.
2. Create and use packages and interfaces.
3. Develop multithreaded applications with synchronization.
4. Provide computed based solutions by using java collection framework and I/O classes
5. Design GUI based applications

Text Book(s)

1. Java The Complete Reference, Herbert Schildt, MC GRAW HILL Education, 9thEdition, 2016.

Reference Books

1. Core Java Volume I – Fundamentals, by Cay S. Horstmann, Gary Cornell Pearson Education Ninth Edition
2. “Java Fundamentals - A Comprehensive Introduction”, Herbert Schildt and Dale Skrien, Special Indian Edition, McGrawHill, 2013.
3. “Java – How to Program”, Paul Deitel, Harvey Deitel, PHI.
4. “Thinking in Java”, Bruce Eckel, Pearson Education.
5. Java and Object Orientation, an introduction, John Hunt, second edition, Springer.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year I Semester

20CSO203 ANALOG AND DIGITAL ELECTRONICS LABORATORY

L T P C
0 0 3 1.5

Pre-requisite **20EEE101**

Course Description:

The goal of this course is to introduce students to the Electronic components, the analysis and design methods, and the underlying principles that make up the framework for creating and implementing electronic circuits for almost any conceivable task. The main emphasis is on developing an engineering point of view that is a mix of practical experience, good intuition, and the capability to apply the mathematical laws that govern the behaviour of electronic elements and circuits. Both analog and digital circuits will be covered.

Course Objectives:

1. To introduce components such as diodes, BJTs and FETs.
2. To know the applications of components.
3. To give understanding of various types of amplifier circuits
4. To learn basic techniques for the design of digital circuits and fundamental concepts used in the design of digital systems.
5. To understand the concepts of combinational logic circuits and sequential circuits.

List of Experiments:

1. Design of Full Wave Rectifier with & without filters
2. Determine the input and output Characteristics of Common Emitter configuration of BJT
3. Determine the input and output Characteristics of Common Base configuration of BJT
4. Determine the drain and transfer characteristics of FET and MOSFET
5. Verify the applications of Op Amp – Adder ,Subtractor , Differentiator , Integrator
6. Design of Data converters – ADC & DAC
7. Realization of Boolean Expressions using Gates
8. Design and realization logic gates using universal gates
9. Generation of clock using NAND / NOR gates
10. Design a 4 – bit Adder / Subtractor
11. Design and realization a Synchronous and Asynchronous counter using flip-flops
12. Study of logic gates using DTL, TTL, ECL, etc.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Know the characteristics of various Electronic components.
2. Understand the utilization of components.
3. Design and analyze opamp applications and data converters
4. Postulates of Boolean algebra and to minimize combinational functions
5. Design and analyze combinational and sequential circuits
6. Known about the logic families and realization of logic gates.

Text Book(s)

1. Integrated Electronics: Analog and Digital Circuits and Systems, 2/e, Jacob Millman, Christos Halkias and Chethan D. Parikh, Tata McGraw-Hill Education, India, 2010.
2. Digital Design, 5/e, Morris Mano and Michael D. Cilette, Pearson, 2011

Reference Books

1. Electronic Devices and Circuits, Jimmy J Cathey, Schaum's outline series, 1988.
2. Digital Principles, 3/e, Roger L. Tokheim, Schaum's outline series, 1994.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech II Year I Semester

20CSO204 DATA STRUCTURES AND ALGORITHMS LABORATORY

L T P C

0 0 3 1.5

Pre-requisite **20CSE102**

Course Description:

This course is aimed to provide hands on experience to implement basic linear and nonlinear data structures. This course covers implementation of stack, queue, list, sorting techniques, binary search trees and graphs.

Course Objectives:

1. To develop skills to analyze and program linear and nonlinear data structures.
2. Develop different data structures with effective usage of arrays, linked lists, arithmetic expression, queue, binary search tree and different sorting techniques.
3. Develop recursive algorithms as they apply to trees and graphs.

List of Programs:

1. Write a C program to perform the following operations on Singly Linked List
 - i) Insertion
 - ii) Deletion
 - iii) Traversal.
2. Write a C program to perform the following operations on Circular Doubly Linked List
 - i) Insertion
 - ii) Deletion
 - iii) Traversal.
3. Write a C program to add two polynomials using Singly Linked List
4. Write a C program to implement Stack using
 - i) Arrays
 - ii) Linked list.
5. Write a C program to read an arithmetic expression in infix notation and do the following
 - i)convert infix expression into postfix
 - ii) Evaluate the Postfix Expression
6. Write a C program class to implement Queue using
 - i) Arrays
 - ii) Linked list.
7. Write a C program to implement Circular Queue using Array
8. Write a C program to perform the following operations on Binary Search Tree
 - i) Insertion
 - ii) Deletion
 - iii) Search a given Key
9. Write a C Program to Perform the Tree Traversal Techniques using recursion.
10. Write a C Program to Perform the Tree Traversal Techniques using without recursion.
11. Write a C program to Implement All functions of a Dictionary by using Hashing
12. Write a C program to implement the following graph traversal algorithms
 - i) Depth First Search
 - ii) Breadth First Search
13. Write a C Program to Implement 0/1 Knapsack problem using Dynamic Programming
14. Write a C program to Implement Traveling Salesperson problem to find the optimal tour using Dynamic Programming
15. Write a C program to Implement N Queen's problem using Back Tracking.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Implement data structures like array, list, stack, queue.
2. Choose appropriate data structure to solve a real world problem.
3. Design algorithms to perform sorting.
4. Apply searching techniques to search an element in a list.
5. Develop applications using tree and graph data structures.

Text Book(s)

1. Object Oriented Programming with ANSI & Turbo C, Ashok N.Kamthane, Pearson Education.
2. Data Structures using C, D.S.Malik, 2nd Edition, Cengage Learning.

Reference Books

1. Data Structures through C, YashavantP.Kanetkar, BPB Publication.
2. Data Structures using C and C++, YedidyahLangsam.MosheJ.Augenstein Aaron M.Tenenbaum, 2nd Edition, PHI.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech II Year I Semester

20CSO205 OBJECT ORIENTED PROGRAMMING – JAVA LABORATORY

L T P C
0 0 3 1.5

Pre-requisite **20CSE102**

Course Description:

Basics of Object-Oriented Programming - objects, classes, polymorphism, inheritance, static and dynamic binding. Object Oriented Programming using Java-classes, interfaces, inheritance, polymorphism, method dispatch, features for encapsulation and modularity.

Course Objectives:

1. Understand object-oriented programming concepts, and apply them in solving problems.
2. Learn the principles of inheritance and polymorphism; and demonstrate how they relate to the design of abstract classes
3. To Introduce the implementation of packages and interfaces
4. Learn the concepts of exception handling and multithreading.
5. Learn the design of Graphical User Interface using applets and swing controls

List of Programs:

- 1 a) Write a Java program that prints all real solutions to the quadratic equation $ax^2 + bx + c = 0$.
Read in a, b, c and use the quadratic formula. If the discriminant $b^2 - 4ac$ is negative, display a message stating that there are no real solutions.
b) Write a Java program that find prime numbers between 1 to n.
c) Write a Java Program that find the factorial of a number
.
- 2 a) The Fibonacci sequence is defined by the following rule: The first two values in the sequence are 1 and 1. Every subsequent value is the sum of the two values preceding it. Write a Java program that print the nth value in the Fibonacci sequence.
b) Write a Java program that checks whether a given string is a palindrome or not. Ex: MADAM is a Palindrome.
c) Write a Java program for sorting a given list of names in ascending order
3. a) Write a java program to split a given text file into n parts. Name each part as the name of the original file followed by .part<n> where n is the sequence number of the part file
b) Write a java program to convert an ArrayList to an Array.
c) Write a Java program to make frequency count of vowels, consonants, special symbols, digits, words in a given text.
4. a) Write a Java program that reads a file name from the user, then displays information about whether the file exists, whether the file is readable, whether the file is writable, the type of file and the length of the file in bytes.

Dept. of Computer Science & Engineering (IoT)

- b) Write a Java program that reads a file and displays the file on the screen, with a line number before each line.
- c) Implement Stack using queues.
- 5. a) Write a java program to make rolling a pair of dice 10,000 times and counts the number of times doubles of are rolled for each different pair of doubles. Hint: Math.random()
 - b) Write java program that inputs 5 numbers, each between 10 and 100 inclusive. As each number is read display it only if it's not a duplicate of any number already read display the complete set of unique values input after the user enters each new value.
 - c) Write a java program to read the time intervals (HH:MM) and to compare system time if the system time between your time intervals print correct time and exit else try again to repute the same thing. By using StringTokenizer class.
- 6. a) Write java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub class overridden area() so that it returns the area of a rectangle and a triangle respectively.
 - b) Write a Java program that creates three threads. First thread displays —Good Morning every one second, the second thread displays —Hello every two seconds and the third thread displays —Welcome every three seconds
- 7. a) Write a Java program that correctly implements producer consumer problem using the concept of inter thread communication.
 - b) Use inheritance to create an exception super class called EexceptionA and exception sub class ExceptionB and ExceptionC, where ExceptionB inherits from ExceptionA and ExceptionC inherits from ExceptionB. Write a java program to demonstrate that the catch block for type ExceptionA catches exception of type ExceptionB and ExceptionC
- 8. Write a Java Program to design login window using AWT components.
- 9. Develop an application for simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -, *, % operations. Add a text field to display the result

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Solve real world problems using OOP techniques.
2. Implement string handling and file handling methods.
3. Design multithreaded applications with synchronization.
4. Develop web applications using AWT components.
5. Create GUI based applications

Dept. of Computer Science & Engineering (IoT)

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Mandatory Course

B. Tech II Year I Semester

20CHE901 ENVIRONMENTAL SCIENCE

L T P C

2 0 0 0

Pre-requisite Basic knowledge about sciences up to intermediate or equivalent level

Course Description:

The course deals with basic concepts of environment, its impact on human, universe, consumption of energy sources, effects, controlling methods for pollution and the environmental ethics to be followed by human beings.

Course Objectives:

1. To make the students aware about the environment and its inter-disciplinary nature and to emphasize the importance of the renewable energy sources.
2. To familiarize the concept of Ecosystem and their importance.
3. To bring the awareness among students about the importance of biodiversity and the need for its conservation.
4. To make the students understand the adverse effects of environmental pollution, its causes and measures to control it.
5. To introduce the environmental ethics and emphasize the urgency of rain water harvesting along with water shed management.

UNIT I MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES 9 hours

Definition, Scope and Importance – Need for Public Awareness. Renewable energy Resources: Solar energy - solar cells, wind energy, tidal energy. Non-renewable energy resources: LPG, water gas, producer gas. Overgrazing, effects of modern agriculture – fertilizer and pesticides.

UNIT II ECOSYSTEMS 9 hours

Concept of an ecosystem. Structure – functions – Producers, Consumers and Decomposers – Ecological succession – Food chains, Food webs and Ecological pyramids – Introduction, types, characteristic features, structure and function of the following ecosystems: Forest, Desert and Lake.

UNIT III BIODIVERSITY AND ITS CONSERVATION 9 hours

Introduction, Definition: Value of biodiversity: consumptive use, productive use, social, ethical and aesthetic values. Biogeographical zones of India. Threats to biodiversity: habitat loss, poaching of wildlife, Endangered and Endemic species of India – Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION 9 hours

Definition, Cause, effects and control measures of pollution – Air, Water, Soil and Noise. Solid Waste Management: Effects and control measures of urban and industrial wastes.

Dept. of Computer Science & Engineering (IoT)

UNIT V SOCIAL ISSUES AND THE ENVIRONMENT

9 hours

Urban problems related to Water conservation, rain water harvesting and watershed management; Climate changes: global warming, acid rain, ozone layer depletion, nuclear accidents. Case Studies: Population growth, variation among nations and population explosion.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Ability to understand the natural environment, its relationship with human activities and need of the day to realize the importance of the renewable energy sources.
2. The knowledge of various ecosystems and their importance along with the concepts of food chains, food webs and ecological pyramids.
3. Familiarity with biodiversity, its importance and the measures for the conservation of biodiversity.
4. The knowledge about the causes, effects and controlling methods for environmental pollution, along with disaster management and solid waste management.
5. Awareness about the sustainable development, environmental ethics, social issues arising due to the environmental disorders.

Text Book(s)

1. Text book of Environmental Studies for Undergraduate Courses by Erach Bharucha for University Grants Commission, Universities Press, 2005.
2. Environmental Studies by R. J. Ranjith Daniels and Jagdish Krishnaswamy, (Wiley Re-print version 2014).
3. Chemistry for Environmental Engineering/C.N. Sawyer, P.L. McCarty, G.F. Parkin (TataMcGraw Hill, Fifth Edition, 2003).
4. Environmental Chemistry by B.K. Sharma, (Goel Publishing House, 2014).
5. Environmental Studies by Benny Joseph (TataMcGraw Hill, Second Edition, 2009).

Reference Books

1. Environmental Science & Engineering by Dr. A. Ravikrishnan, Hitech Publishing Company Pvt. Ltd. 2013.
2. Perspectives in Environmental Studies, Second edition, Anubha Koushik and C.P. Koushik, New Age International (P) Limited, Publishers, 2004.

Mode of Evaluation: Assignments, Mid Term Tests.

II Year II Semester

Dept. of Computer Science & Engineering (IoT)

B. Tech II Year II Semester

20HUM101 ECONOMICS AND FINANCIAL ACCOUNTING FOR ENGINEERS

L T P C
3 0 0 3

Pre-requisite NIL

Course Description:

The Engineering Economics and Financial Accounting aims to provide an insight into production, cost analysis, market structure, Accounting Basic concepts and financial Statement Analysis. The course is designed to give emphasis on the application of real life examples on various fundamental issues of economics and accounts. This course introduces the accounting system, principles, types of accounts, and financial statements etc. The ratio analysis and financial analysis are useful to know the positions of financial statements are explained to know the analysis of financial matters.

Course Objectives:

1. Describe the nature of engineering economics in dealing with the issues of scarcity;
2. Know the supply, demand, production and cost analysis to analyze the impact of economic events on markets;
3. Explain the performance of firms under different market structures and Price determination in various market conditions.
4. Explain the accounting principles, types of accounting and preparation of final accounts; and
5. Describe the financial statement analysis and investment evaluation through ratios and capital budgeting techniques.

UNIT I DEMAND ANALYSIS

9 hours

Scope and Significance of Economics- Understanding the problem of scarcity and choice - Elements of market Economy: Demand, Supply and Market Equilibrium- Theory of Demand, Elasticity of Demand, Supply and Law of Supply.

UNIT II PRODUCTION AND COST ANALYSIS

9 hours

Production Function – Short-run and long- run production – Cost Analysis: Cost concepts - Cost Structure of Firms and output decision- Break-Even Analysis (BEA) – Managerial significance and limitations of BEA - Determination of Break Even Point (Simple Problems).

UNIT III MARKET STRUCTURE AND PRICING

9 hours

Classification of Markets - General Equilibrium and efficiency of Perfect competition, Monopoly, Monopolistic, Oligopoly, Duopoly – Price determination under various market conditions- Pricing objectives- Methods.

UNIT IV BASICS OF ACCOUNTING

9 hours

Uses of Accounting - Book Keeping Vs Accounting - Double Entry System - Accounting Principles - Classification Of Accounts - Rules Of Debit & Credit- Accounting Cycle: Journal, Ledger, Trial Balance. Final Accounts: Trading Account - Profit & Loss Account - Balance Sheet with Adjustments, (Simple Problems).

Dept. of Computer Science & Engineering (IoT)

UNIT V FINANCIAL RATIO ANALYSIS AND CAPITAL BUDGETING 9 hours

Ratio Analysis - Liquidity, Leverage, Solvency, Activity and Profitability Ratios - Capital Budgeting. (Simple Problems).

Course Outcomes:

At the end of the course, students will be able to:

1. Understand Engineering economics basic concepts,
2. Analyze the concepts of demand, elasticity, supply, Production, Cost Analysis and its essence in floating of an organization,
3. Compare different market structures and identify suitable market,
4. Demonstrate an understanding and analyzing the accounting statements, and
5. Exhibit the ability to apply knowledge of ratio analysis and capital budgeting techniques in financial statement analysis and investment evaluation respectively.

Text Book(s)

2. Financial Accounting, S. N. Maheshwari, Sultan Chand, 2009
3. Financial Statement Analysis, Khan and Jain, PHI, 2009
4. Financial Management, Prasanna Chandra, T.M.H, 2009

Reference Books

1. Lipsey, R. G. & K. A. Chrystal, "Economics", Oxford University Press, 11th Edition, 2007
2. Samuelson P. A. & Nordhaus W. D. "Economics", Tata McGraw-Hill 18th Edition, 2007
3. Financial Management and Policy, Van Horne, James, C., Pearson, 2009.
4. Financial Management, I. M. Pandey, Vikas Publications

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

B. Tech II Year II Semester

20MAT112 DISCRETE MATHEMATICAL STRUCTURES

L T P C
3 0 0 3

Pre-requisite **20MAT110**

Course Description:

This course introduces the concepts of discrete mathematics and their applications in computer science. It covers algebraic structures, combinatorics and finite state machines. It also provides insight into the concepts of graph theory and their applications.

Course Objectives:

1. To introduce the concepts of logic, rules of inference and predicates.
2. To discuss the concepts on combinatorics.
3. To explain the concepts of algebraic structures.
4. To familiarize the principles of Lattices and Boolean algebra.
5. To illustrate the problems in graph theory.

UNIT I MATHEMATICAL LOGIC AND STATEMENT CALCULUS 9 hours

Introduction -Statements and Notation - Connectives – Tautologies – Two State Devices and Statement logic - Equivalence - Implications - The Theory of Inference for the Statement Calculus –The Predicate Calculus - Inference Theory of the Predicate Calculus.

UNIT II COMBINATORICS 9 hours

The Basics of Counting- The Pigeonhole Principle -Permutations and Combinations - Binomial Coefficients - Generalized Permutations and Combinations –Generating Permutations and Combinations.

UNIT III ALGEBRAIC STRUCTURES 9 hours

Semigroups and Monoids - Grammars and Languages –Types of Grammars and Languages – Groups – Subgroups – Lagrange’s Theorem –Homomorphism: Introduction –Properties - Group Codes.

UNIT IV LATTICES AND BOOLEAN ALGEBRA 9 hours

Relations - Partially Ordered Relations - Hasse Diagram - Poset - Lattices - Boolean algebra - Boolean Functions - Representation and Minimization of Boolean Functions - Karnaugh map representation.

UNIT V GRAPH THEORY 9 hours

Basic Concepts of Graph Theory - Isomorphic graph - Matrix Representation of Graphs – Trees - Kruskal’s and Dijkstra’s algorithms - Storage Representation and Manipulation of Graphs - Introduction to Finite State Machines.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Evaluate elementary mathematical arguments and identify fallacious reasoning (not just fallacious conclusions) for develop syntax of programming languages.
2. Apply the concepts inclusion/exclusion principle and the pigeonhole methodology in data structure and algorithm.
3. Learn elementary proofs and properties of modular arithmetical results; and explain their applications such as in coding theory and cryptography.
4. Apply proof techniques towards solving problems in Boolean algebra and computer circuit designing.
5. Apply graph theory models and finite state machines concepts to solve critical networking issues, shortest path problems, scheduling, etc.

Text Book(s)

1. J.P. Trembley and R.Manohar, “Discrete Mathematical Structures with Applications to Computer Science”, Tata McGraw Hill – 13th reprint, 2012.

4. C.L.Liu, “Elements of Discrete Mathematics”, Tata McGraw Hill, 3rd Edition, 2008.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

B. Tech II Year II Semester

20CSO107 INTERNET OF THINGS

L T P C
3 0 0 3

Pre-requisite NIL

Course Description:

The Internet of Things (IoT) is a network of a wide variety of devices like vehicles, humans, soil etc. These devices gather data using sensors, which can be used for monitoring or control. This course is an introduction to the embedded devices, communication protocols and APIs used in IoT.

Course Objectives:

1. Introduce the fundamental concepts of IoT and physical computing
2. Expose the student to a variety of embedded boards and IoT Platforms
3. Create a basic understanding of the communication protocols in IoT communications.
4. Familiarize the student with application program interfaces for IoT.
5. Enable students to create simple IoT applications

UNIT I OVERVIEW OF IOT 9 hours

The Internet of Things: An Overview; The Flavor of the Internet of Things; The “Internet” of Things”; The Technology of the Internet of Things; Enchanted Objects; Who is Making the Internet of Things?; Design Principles for Connected Devices; Calm and Ambient Technology; Privacy; Keeping Secrets; Whose Data Is It Anyway?; Web Thinking for Connected Devices; Small Pieces, Loosely Joined; First-Class Citizens On The Internet; Graceful Degradation; Affordances

UNIT II EMBEDDED DEVICES – I (ARDUINO) 9 hours

Embedded Computing Basics; Microcontrollers; System-on-Chips; Choosing Your Platform; Arduino; Developing on the Arduino; Some Notes on the Hardware; Openness;

UNIT III EMBEDDED DEVICES – II (RASPBERRY PI) 9 hours

Raspberry Pi ; Cases and Extension Boards; Developing on the Raspberry Pi; Some Notes on the Hardware; Openness; Other notable platforms; Mobile phones and tablets; Plug Computing: Always-on Internet of Things

UNIT IV COMMUNICATION IN THE IOT 9 hours

Internet Principles; Internet Communications: An Overview ; IP; TCP; The IP Protocol Suite (TCP/IP); UDP ; IP Addresses; DNS ; Static IP Address Assignment ; Dynamic IP Address Assignment; IPv6 ; MAC Addresses ; TCP and UDP Ports ; An Example: HTTP Ports ; Other Common Ports; Application Layer Protocols- HTTP; HTTPS: Encrypted HTTP ;Other Application Layer Protocols.

Dept. of Computer Science & Engineering (IoT)

UNIT V PROTOTYPING ONLINE COMPONENTS

9 hours

Getting Started with an API; Mashing Up APIs; Scraping; Legalities; Writing a New API; Clockodillo; Security; Implementing the API; Using Curl to Test; Going Further; Real-Time Reactions; Polling; Comet; Other Protocols ; MQ Telemetry Transport; Extensible Messaging and Presence Protocol; Constrained Application Protocol.

Course Outcomes:

At the end of the course, students will be able to:

1. Interpret the design principles that govern connected devices and select a platform for a particular embedded computing application
2. Develop simple applications using Arduino microcontroller
3. Develop simple applications using Raspberry Pi
4. Utilize the Internet communication protocols for IoT applications
5. Design and develop a solution for a given application using APIs

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year II Semester

20CSO108 DATABASE MANAGEMENT SYSTEMS

L T P C
2 1 0 3

Pre-requisite NIL

Course Description:

This course is designed to provide a basic understanding of database systems and their design. The course material is further used for developing any web-based applications in which the database is back end. The course covers all basic and advanced queries of SQL, PL/SQL programs, Relational algebra and calculus, normal forms, low-level details such as representing data elements of the database and indexed structures, transaction management, and data recovery.

Course Objectives:

1. To understand the concept of DBMS and ER Modelling.
2. To comprehend the structure of SQL Queries and commands to manage data from the databases
3. To learn PL/SQL concepts that help in seamless processing of SQL
4. To explain the normalization, Query optimization, and relational algebra
5. To apply Transaction processing, concurrency control, recovery, security, and indexing for the real-time data
6. To gain knowledge on Database Attacks, Recovery, and Recent Trends

UNIT I INTRODUCTION

9 hours

Database Systems Concepts and Architecture: History and motivation for database systems- characteristics of database approach Advantages of using DBMS approach- Architectures for DBMS- Classification of database management systems.

Database Modelling: Types of Attributes, Entities, Relationships, ER Model.

Introduction to Relational Model: Introduction, Logical database design, Introduction to views.

UNIT II RELATIONAL MODEL

9 hours

Relational Data Model: Concept of relations, schema-instance distinction, keys, referential integrity, foreign keys, relational algebra operators, SQL - Introduction, data definition in SQL, table, key, and foreign key definitions. Querying in SQL, notion of aggregation, Integrity constraints, aggregation functions group by and having clauses.

PL/SQL concepts: Embedded SQL, Dynamic SQL, triggers and active databases, Cursors, Introduction to JDBC, Stored Procedures.

Relational Algebra and Calculus: Preliminaries, Relational algebra- Selection and Projection, Set Operations, Renaming, Joins, Division. Relational Calculus.

UNIT III DATABASE DESIGN & SCHEMA REFINEMENT

9 hours

Database Design: Dependencies and Normal forms, dependency theory - functional dependencies, Armstrong's axioms for FD's, closure of a set of FDs.

Normalization: 1NF, 2NF, 3NF, BCNF, 4NF, and 5NF decompositions and desirable properties.

UNIT IV TRANSACTION PROCESSING & INDEXING

9 hours

Transaction processing - Concepts of transaction processing, ACID properties, concurrency control, Time-stamp based and lock-based protocols for concurrency control. Serializability of scheduling
Index Structures – Indexes on Sequential Files – Secondary Indexes – B-Trees – Hash Tables.

UNIT V DATABASE ATTACKS, RECOVERY, AND RECENT TRENDS

9 hours

Database Attacks and Recovery: SQL Injection, Recovery based on deferred update – Recovery techniques based on immediate update - Shadow Paging
Recent Trends: Need of NoSQL, CAP Theorem, different NoSQL data models.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Apply design principles for database design, ER model
2. Demonstrate the basics of query evaluation and heuristic query optimization techniques
3. Access normalization relations of the relational model using normal forms
4. Implement transaction processing techniques in the database.
5. Design database security plan for database

Text Book(s)

2. Database Systems, The Complete Book, Hector Garcia-Molina, Jeffrey D. Ullman, and Jennifer Widom, 3rd impression, 2009, Pearson.

Reference Books

1. Silberschatz, H.F. Korth S. Sudershan, Database System Concepts, McGraw Hill, 6th Ed., 2010.
2. R. Elmasri S. B. Navathe, Fundamentals of Database Systems, Addison Wesley, 2015
3. Thomas Connolly, Carolyn Begg, Database Systems: A Practical Approach to Design, Implementation, and Management, 6th Edition, 2012.
4. Pramod J. Sadalage and Marin Fowler, NoSQL Distilled: A brief guide to merging world of Polyglot persistence, Addison Wesley, 2012

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year II Semester

20CSO109 COMMUNICATION NETWORKS

L T P C
3 0 0 3

Pre-requisite NIL

Course Description:

The main emphasis of this course is to introduce to computer communication, TCP/IP layers functionalities, and operations of network protocols.

Course Objectives:

1. To study the evolution of computer networks, foundational principles, architectures, and techniques employed in computer networks.
2. To study the concepts of communication networks from layered perspective
3. To provide students with a theoretical and practical base in computer networks issues
4. Student will be able pursue his study in advanced networking courses
5. To Prepare students for easy transfer from academia into future directions of research.

UNIT I INTRODUCTION AND THE PHYSICAL LAYER 9 hours

Introduction: Networks, Network Types, Internet History, Standards and Administration, Network Models: Protocol Layering, TCP/IP Protocol Suite, The ISO Model. **The physical layer:** Data and Signals, Transmission impairment, Data rate limits, Performance, Transmission media: Introduction, Guided Media, Unguided Media, Switching: Introduction, Circuit Switched

UNIT II THE DATA LINK LAYER 9 hours

Introduction, Link layer addressing, Error detection and Correction: Cyclic codes, Checksum, Forward error correction, **Data link control:** DLC Services, Data link layer protocols, HDLC, Point to Point Protocol, Media Access control: Random Access, Controlled Access, Channelization, connecting devices and virtual LANs: Connecting Devices.

UNIT III THE NETWORK LAYER 9 hours

Network layer design issues, Routing algorithms, Congestion control algorithms, Quality of service, Internetworking, The network layer in the Internet: IPV4 Addresses, IPV6, Internet Control protocol, OSPF, BGP, IP, ICMPv4, IGMP.

UNIT IV THE TRANSPORT LAYER 9 hours

The Transport Service, Elements of Transport Protocols, Congestion Control, The internet transport protocols: UDP, TCP, Performance problems in computer networks, Network performance measurement.

UNIT V THE APPLICATION LAYER 9 hours

Introduction, Client Server Programming, WWW and HTTP, FTP, e-mail, TELNET, Secure Shell, Domain Name System, SNMP. Case study- Computer Networks in health care.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Ability to choose the transmission media depending on the requirements.
2. Ability to identify the different types of network topologies and protocols.
3. Ability to configure a computer network logically, by enumerating the layers of the TCP/IP.
4. Understanding and analyzing the concepts of routing, congestion control
5. Ability to use the protocols, and analyzing it for any network

Text Book(s)

1. “Data communications and networking”, Behrouz A. Forouzan, Mc Graw Hill Education, 5th edition, 2012.
2. “Computer Networks”, Andrew S. Tanenbaum, Wetherall, Pearson, 5th edition, 2010.

Reference Books

1. “Internetworking with TCP/IP – Principles, protocols, and architecture”, Volume 1, Douglas E. Comer, 5th edition, PHI
2. “Introduction to Computer Networks and Cyber Security”, Chawan- Hwa Wu, Irwin, CRC Publications.
3. “Computer Networks”, 5E, Peterson, Davie, Elsevier.
4. “Data Communication and Networks”, Bhushan Trivedi, Oxford University press

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech II Year II Semester

20CSO206 INTERNET OF THINGS LABORATORY

L T P C

0 0 3 1.5

Pre-requisite **NIL**

Course Description:

This course provide hands-on practices on IoT using Arduino & Rasperry microcontrollers with various interfaces such as sensors, actuators, mobile app, cloud, social media.

Course Objectives:

1. To understand working principles of IoT devices
2. To get exposure towards the IoT internals
3. To understand the concepts of real world designs, industrial automation and commercial needs for designing IOT enabled solution

List of Programs:

1. Study on IoT Platform

- a) Getting information and study of IOT microcontrollers (Arduino, Resperryypi)

2. Study on IoT Platform

- a) Getting information about Sensors (IR, temperature, pressure, gas sensor)
- b) Getting information about actuators. (Piezoelectric actuator, pneumatic actuator)

3. Programming with Arduino platform

- a) Installation of Arduino in computer and verifying any errors in connection.
- b) Control LED using Arduino
- c) Traffic Light Control

4. Programming with Arduino platform and Reading from Sensors

- a) interfacing sensors to Arduino board and getting information from them (any two sensors).
- b) Experiment with both analog and digital sensors.

5. Programming with Resperryypi

- a) Displaying Date on Serial Monitor
- b) Automated Door Opening System

6. Connecting Android Phone with Arduino

- a) Connecting Arduino with Mobile Device Using the Bluetooth Module.
- b) Control any two actuators connected to the development board using Bluetooth.

7. Integrating Ethernet Shield.

Read data from sensor and send it to a requesting client using socket communication. Note: The client and server should be connected to same local area network

8. Creating Mobile App

- a) Create a mobile app to control an actuator.
- b) Control Electronic Devices from anywhere across the world using Internet & Mobile App.

9. Interfacing Cloud

- a) Push sensor data to cloud - Use Arduino to Upload data from Environmental Sensors to Cloud Server.
- b) Control an actuator through cloud

Dept. of Computer Science & Engineering (IoT)

10. Data analysis and Visualization

Access the data pushed from sensor to cloud and apply any data analytics or visualization services.

11. Social media with IoT

Creating Program for Local Host Web Server for controlling devices and update status on Twitter through Arduino.

12. Mini Project

Identify a problem in your local area or college which can be solved by integrating the things you learned so far and create a prototype to solve it.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Choose the sensors and actuators for an IoT application
2. Select protocols for a specific IoT application
3. Utilize the cloud platform and APIs for IoT application
4. Experiment with embedded boards for creating IoT prototypes
5. Design and develop a solution for a given IoT application

Text Book(s)

1. Adrian McEwen, Hakim Cassimally, Designing the Internet of Things, Wiley Publications, 2014, ISBN:978-1-118-43062-0.
2. Arshdeep Bahga, Vijay Madisetti, Internet of Things: A Hands-On Approach, Universities Press, 2015. ISBN: 978-8173719547

2. Matt Richardson & Shawn Wallace, Make: Getting Started with Raspberry Pi, O'Reilly, 3rd Edition, 2016, ISBN:978-1-680-45246-4.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech II Year II Semester

20CSO207 DATABASE MANAGEMENT SYSTEMS LABORATORY

L T P C
0 0 3 1.5

Pre-requisite **NIL**

Course Description:

This course is designed to provide a basic understanding of database systems and their design. The course material is further used for developing any web-based applications in which the Database is back end. The course covers all basic and advanced queries of SQL, PL/SQL programs, low-level details such as representing data elements of Databases.

Course Objectives:

1. To understand the concept of DBMS and ER Modelling.
2. To understand the components of DBMS and to study database design.
3. To comprehend the structure of SQL Queries and commands to manage data from the databases
4. To comprehend the structure of SQL Queries to query, update, and manage a database.
5. To understand all constraints to develop a business application using cursors, triggers, and stored procedures

List of Programs:

1. Analyze the below problem carefully and come up with the entities in it. Identify what data has to be persisted in the Database. This contains the entities, attributes, etc. Identify the primary keys for all the entities. Identify the other keys like candidate keys, partial keys, if any. The student is required to submit a document by writing the Entities and keys.). Indicate the type of relationships (total/partial). Try to incorporate generalization, aggregation, specialization, etc. whenever required
 - A) Draw an ER diagram for Library Management System
 - B) Draw an ER diagram for Hospital Management System
2. Students should be allowed to choose appropriate DBMS software, install it, configure it and start working on it. Create sample tables, and insert the data into them, and perform the following using DDL and DML commands
 - a. Insert the data given above in employee, department, and project tables.
 - b. Retrieve all the employees' information for a particular department number
 - c. Get Employee name along with his SSN and Supervisor SSN.
 - d. Retrieve the employee names whose bdate is '29-MAR-1959.'
 - e. Get salaries of the employees without duplications.
 - f. Retrieve the MgrSSN, MgrStartDate of the manager of 'Research' department.
 - g. Change the department number of an employee having fname as 'Joyce' to 3

Dept. of Computer Science & Engineering (IoT)

- h. Alter Table department add column ContactNo of NUMBER data type and insert values into this column only.
 - i. Change table department by modifying the size of field ContactNo.
 - j. Modify the field name ContactNo of departments table to MobileNo.
 - k. Change the name of Table Department to DEPT.
 - l. Alter Table department by removing column MobileNo.
 - m. Create a table COPYOFDEPT as a copy of the table DEPT.
 - n. Remove the rows from COPYOF DEPT table with department number as 5.
 - o. Remove COPYOF DEPT table
3. Perform following queries
- a. Retrieve all data from employee, jobs, and deposit.
 - b. Give details of account no. and deposited rupees of customers having an account opened between dates 01-01-06 and 25-07-06.
 - c. Display all jobs with a minimum salary is greater than 4000.
 - d. Display name and salary of the employee whose department no is 20. Give alias name to name of the employee.
 - e. Display employee no, name, and department details of those employees whose department lies in(10,20)
4. To study various options of LIKE predicate
- a. Display all employees whose name starts with 'V' and the third character is 'v.'
 - b. Display name, number, and salary of those employees whose name is 5 characters long and the first three characters are 'Vic.'
 - c. Display the non-null values of employees and employee name second character should be 'n,' and the string should be 5 characters long.
 - d. Display the null values of an employee, and also employee name's third character should be 'a'.
 - e. What will be output if you are giving LIKE predicate as '%_%' ESCAPE '\'
5. To Perform various data manipulation commands, aggregate functions, and sorting concepts on all created tables.
- a. List total deposit from the deposit.
 - b. List total loan from karolbagh branch
 - c. Give maximum loan from branch vice.
 - d. Count the total number of customers
 - e. Count total number of customer's cities.
 - f. Create table supplier from the employee with all the columns.
 - g. Create table sup1 from the employee with the first two columns.
 - h. Create table sup2 from the employee with no data
 - i. Insert the data into sup2 from an employee whose second character should be 'n' and string should be 5 characters long in the employee's name field.
 - j. Delete all the rows from sup1.
 - k. Delete the detail of the supplier whose sup_no is 103.
 - l. Rename the table sup2.

Dept. of Computer Science & Engineering (IoT)

- m. Destroy table sup1 with all the data.
 - n. Update the value dept_no to 10 where second character of emp. name is 'm'.
 - o. Update the value of employee name, whose employee number is 103.
6. To know how the constraints are used to make a table contain valid data.
Execute the following Queries on the Database to note the violations integrity constraints by any of the following operations
 - a. Insert ('Robert', 'F', 'Scott', '987987987 ', '21-JUN-42', '2365 Newcastle Rd, Bellaire, TX', M, 58000, '888665555', 1) into EMPLOYEE.
 - b. Insert ('Ramez', 'F', 'Scott', ' ', '21-JUN-42', '2365 Newcastle Rd, Bellaire, TX', M, 58000, '888665555', 1) into EMPLOYEE.
 - c. Insert ('677678989', null, '40.0') into WORKS_ON.
 - d. Insert ('453453453', 'John', M, '12-DEC-60', 'SPOUSE') into DEPENDENT
 - e. Insert ('343453453', 'Varun',',', '12-DEC-60', 'SON') into DEPENDENT
 - f. Delete WORKS_ON tuples with ESSN= '333445555'.
 - g. Modify MGRSSN and MGRSTARTDATE of the DEPARTMENT tuple with DNUMBER=5 to '123456789' and '01-OCT-88', respectively.
7. To study Single-row functions.
 - a. Write a query to display the current date.
 - b. For each employee, display the employee number, job, salary, and salary increased by 15% and expressed as a whole number. Label the column New Salary
 - c. Modify your query no 2 to add a column that subtracts the old salary from the new salary. Label the column Increase
 - d. Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.
 - e. Write a query that produces the following for each employee: <employee last name> earns <salary> monthly
 - f. Write a query to calculate the annual compensation of all employees (sal+comm)
8. Displaying Data from Multiple Tables (join)
 - a. Give details of customers Vivek
 - b. Give the names of the customers who are borrowers and depositors and having living city Madanapalle
 - c. Give city as their city name of customers having the same living branch.
 - d. Write a query to display the last name, department number, and department name for all employees.
 - e. Create a unique listing of all jobs that are in department 30. Include the location of the department in the output
 - f. Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.

Dept. of Computer Science & Engineering (IoT)

- g. Display the employee's last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.
 - h. Create a query to display the name and hire date of any employee hired after employee SCOTT.
9. To apply the concept of Aggregating Data using Group functions.
 - a. List total deposit of customer having account date after 1-Jan-96.
 - b. List total deposit of customers living in city Nagpur.
 - c. List maximum deposit of customers living in Bombay.
 - d. Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.
 - e. Write a query that displays the difference between the highest and lowest salaries. Label the column DIFFERENCE
 - f. Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998
 - g. Find the average salaries for each department without displaying the respective department numbers.
 - h. Write a query to display the total salary being paid to each job title within each department.
 - i. Find the average salaries > 2000 for each department without displaying the respective department numbers.
 - j. Display the job and total salary for each job with a total salary exceeding 3000, which excludes the present and sorts the list by the total salary.
 - k. List the branches having the sum of deposit more than 5000 and located in city Bombay.
10. To solve queries using the concept of the subquery.
 - a. Write a query to display the last name and hire date of any employee in the same department as SCOTT. Exclude SCOTT
 - b. Give the name of customers who are depositors having same branch city of Mr. Arul.
 - c. Give deposit details and loan details of the customer in the same city where Pramod is living.
 - d. Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.
 - e. Give names of depositors having the same living city as Mr. Hari and having deposit amount greater than 2000
 - f. Display the last name and salary of every employee who reports to ford.
 - g. Display the department number, name, and job for every employee in the accounting department.
 - h. List the name of the branch having the highest number of depositors.
 - i. Give the name of cities wherein the maximum number of branches are located.
 - j. Give the name of customers living in the same city where maximum depositors are located.

Dept. of Computer Science & Engineering (IoT)

11. . Write a PL/SQL block to change the address of a particular employee by taking their employee number interactively.
 - b. Write a cursor program to display manager details for each department
12. a. Create a trigger which checks whether an employee with Emp_no is present in the Employee table before inserting it into EMP.
 - b. Write a procedure to insert a record into the ORDER table by validating the qty limit of the item and also check whether that item exists

Project-Based Learning:

Design and implementation of Student Information System

Choose a Mini Project and apply the database concepts as given below.

- Draw ER Diagram
- Tables Creation
- Establish the relationship between relevant tables Apply Normalization (if necessary)
- Create GUI
- Establish Connection between front end and back end as Oracle
- Prepare Project Report

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Perform DDL and DML operations on database tables.
2. Design and implement complex queries to access the data using SQL join.
3. Implement stored procedures in PL/SQL.
4. Implement exceptions and triggers to solve real-time problems.
5. Design and develop a real-world application to access and render data.

2. Thomas Connolly, Carolyn Begg, Database Systems: A Practical Approach to Design, Implementation and Management, 6th Edition, 2012.

Mode of Evaluation: Continuous Internal Evaluation of the Lab Experiments, Record, Viva-voce, and External Lab Examination.

20CSO208 COMMUNICATION NETWORKS LABORATORY

L T P C
0 0 3 1.5

Pre-requisite **NIL**

Course Description:

This course helps the students to understand comprising simulation of various protocols and performance; TCP/IP Level Programming, Routing Algorithms and internetworking.

Course Objectives:

1. To provide students with a theoretical and practical base in computer networks issues
2. Student will be able pursue his study in advanced networking courses
3. Prepare students for easy transfer from academia into practical life

List of Programs:

1. Implementation of stop and wait protocol and sliding window protocol
2. Write a code simulating ARP /RARP protocols
3. Write a code simulating ping/traceroute command
4. Write a program to generate CRC code for checking error.
5. Create a socket for HTTP for webpage upload and download
6. Implementation of Sub Netting
7. Applications using TCP and UDP Sockets like DNS, SNMP and File Transfer
8. Transferring data between two nodes using NS
9. Simulation of data transfer and packet loss using NS
10. Simulation of Congestion Control Algorithms using NS
11. Protocol analysis with Wireshark
12. Packet Capture & Traffic Analysis with Wireshark

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Implementation of congestion control protocols.
2. Implementation of various sockets.
3. Implement error detection and correction techniques.
4. Simulate the various network and transport layer protocols.
5. Analyze packets using packet analyzer tools.

Text Book(s)

1. Data Communications and Networking, Behrouz A. Forouzan, Fourth Edition, Tata McGraw Hill.
2. Understanding Communications and Networks, Third Edition, W.A.Shay, Cengage Learning.

20HUM901 INDIAN CONSTITUTION

L T P C
2 0 0 0

Pre-requisite **NIL**

Course Description:

The Constitution of India is the supreme law of India. Parliament of India can not make any law which violates the Fundamental Rights enumerated under the Part III of the Constitution. The Parliament of India has been empowered to amend the Constitution under Article 368, however, it cannot use this power to change the “basic structure” of the constitution, which has been ruled and explained by the Supreme Court of India in its historical judgments. The Constitution of India reflects the idea of “Constitutionalism” – a modern and progressive concept historically developed by the thinkers of “liberalism” – an ideology which has been recognized as one of the most popular political ideology and result of historical struggles against arbitrary use of sovereign power by state.

Course Objectives:

The course is intended to:

- To know about Indian constitution;
- To know about central and state government functionalities in India; and
- To know about Indian society.

UNIT I INTRODUCTION

6 hours

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

**UNIT II STRUCTURE AND FUNCTION OF CENTRAL
GOVERNMENT**

6 hours

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III STRUCTURE AND FUNCTION OF STATE GOVERNMENT

6 hours

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV CONSTITUTION FUNCTIONS

6 hours

Dept. of Computer Science & Engineering (IoT)

Indian Federal System – Center – State Relations – President’s Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V INDIAN SOCIETY

6 hours

Society: Nature, Meaning and definition; Indian Social Structure; Caste, Religion, Language in India Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

Course Outcomes:

Upon completion of the course, students will be able to:

1. Understand the functions of the Indian government; and
2. Understand and abide the rules of the Indian constitution.

Text Books:

1. Durga Das Basu, “Introduction to the Constitution of India “, Prentice Hall of India, New Delhi..
2. R.C.Agarwal, (1997) “Indian Political System”, S.Chand and Company, New Delhi.
3. Maciver and Page, “ Society: An Introduction Analysis “, Mac Milan India Ltd., New Delhi.
4. K.L.Sharma, (1997) “Social Stratification in India: Issues and Themes”, Jawaharlal Nehru University, New Delhi.

Reference Books:

1. Sharma, Brij Kishore, “ Introduction to the Constitution of India:, Prentice Hall of India, New Delhi.
2. U.R.Gahai, “Indian Political System “, New Academic Publishing House, Jalaendhar.
3. R.N. Sharma, “Indian Social Problems “, Media Promoters and Publishers Pvt. Ltd.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

III Year I Semester

B. Tech III Year I Semester

20CSO110 SENSORS AND SIGNAL CONDITIONING

L T P C

Pre-requisite 20EEE101

3 0 0 3

Course Description:

The course introduces fundamentals of sensors and provides essential knowledge about design of signal conditioning circuits for the purpose of interfacing with embedded hardware. The course will be useful to gain knowledge of the latest developments in measurement theory and practice, and also helps to learn typical characteristics and capabilities of the range of sensors and instruments that are currently in use.

Course Objectives:

1. To expose the students to various sensors and transducers for measuring mechanical quantities.
2. To learn the basic conditioning circuits for various sensors and transducers
3. To understand the specifications of sensors and transducers.
4. Employ commonly used sensors in industry for measurement of temperature, position, accelerometer, vibration sensor, flow and level.
5. Apply the use of sensors for measurement of displacement, force and pressure.

UNIT I INTRODUCTION TO MEASUREMENT AND SIGNAL CONDITIONING 9 hours

Introduction: General concepts and terminology of measurement systems, general input-output configuration, static and dynamic characteristics of a measurement system, Statistical analysis of measurement data. Standards and Calibration. Transducers and sensors, classification, emerging fields of sensor technologies.

UNIT II VARIABLE RESISTANCE TRANSDUCERS & STRAIN GAUGE APPLICATIONS 9 hours

Variable Resistance Transducers: Potentiometers, metal and semiconductor strain gauges and their signal conditioning circuits, **Strain Gauge Applications:** Load and torque measurement. Instrumentation amplifier-circuits and applications

UNIT III INDUCTIVE TRANSDUCERS 9 hours

Inductive Transducers - Transformer type, synchro's, eddy current transducers, proximity detectors. Tacho generators and stroboscope. Capacitive transducers, capacitive microphone

**UNIT IV SELF GENERATING SENSORS AND SIGNAL
CONDITIONING**

9 hours

Piezoelectric Transducers, charge amplifier and signal conditioning of PE transducers; photoelectric transducers, photo-voltaic cell, proximity sensors, Hall effect sensors, Magnetostrictive transducers. **Thermocouples**: Thermoelectric effects, laws of thermocouple, cold junction compensation techniques, thermocouple types, construction, measuring circuits, thermocouple burn out detection and high temperature measurement methods.

UNIT V DIGITAL AND INTELLIGENT SENSORS

9 hours

Position Encoders: Incremental position encoders, Absolute position encoders; **Resonant Sensors**: Sensors based on quartz resonators, Vibrating cylinder sensors, Digital flowmeters; **Conversion to Frequency, Period, or Time Duration**: Voltage-to-frequency conversion, Direct quantity-to-frequency conversion; Introduction to Direct Sensor - Microcontroller Interfacing.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Analysis the basic condition of various sensors and signal conditioning
2. Priorities measuring mechanical quantities of sensors and transducers
3. Interpret on working condition of inductive sensors
4. Understand the various characteristics of self-generating sensors.
5. Understand advances in sensor technology

B. Tech III Year I Semester

20CSO111 COMPUTER ORGANIZATION AND ARCHITECTURE

L T P C

Pre-requisite Nil

3 0 0 3

Course Description:

This course aims at introducing the concepts of computer architecture and organization. It involves design aspects, and deals with the current trends in computer architecture. It also aims to improve system performance by effective utilization of system resources such as memory and I/O subsystems.

Course Objectives:

1. To make students understand the basic structure and operation of digital computer.
2. To understand the hardware-software interface.
3. To familiarize the students with arithmetic and logic unit and implementation of fixed point and floating-point arithmetic operations.
4. To expose the students to the concept of pipelining.
5. To familiarize the students with hierarchical memory system including cache memories and virtual memory.
6. To expose the students with different ways of communicating with I/O devices and standard I/O interfaces

UNIT I OVERVIEW & INSTRUCTIONS 9 hours

Eight ideas – Components of a computer system – Technology – Performance – Power wall – Uniprocessors to multiprocessors; Instructions – operations and operands – representing instructions – Logical operations – control operations – Addressing modes.

UNIT II ARITHMETIC OPERATIONS 9 hours

Signed/Unsigned integer representation- ALU - Addition and subtraction – Multiplication – Sequential multiplication- Booths Algorithm- Modified Booths Algorithm- Division- restoring and non-restoring division – Floating point representation- floating point arithmetic – floating point addition/subtraction- floating point multiplication/division.

UNIT III PROCESSOR AND CONTROL UNIT 9 hours

Basic MIPS implementation – Building datapath – Pipelining – Pipelined datapath and control – Handling Data hazards & Control hazards: Dynamic Branch Prediction – Exceptions.

UNIT IV PARALLELISM 9 hours

Instruction-level-parallelism: Static and dynamic multiple issue processors – Parallel processing challenges – Flynn's classification – Hardware multithreading – Multicore processors.

UNIT V MEMORY AND I/O SYSTEMS

9 hours

Memory hierarchy - Memory technologies – Cache basics – Cache Mapping Techniques - Measuring and improving cache performance – Virtual memory, TLBs - Input/output system, programmed I/O, DMA and interrupts, I/O processors.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. To understand instructions and addressing modes of a computer system.
2. To Design arithmetic and logic unit.
3. Design and analyse pipelined control units.
4. Understand parallel processing architectures.
5. Evaluate performance of memory systems

4. John P. Hayes, “Computer Architecture and Organization”, Third Edition, Tata Mc Graw Hill, 1998.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

B. Tech III Year I Semester

20CSO112 DATA SCIENCE FOR IOT

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course is designed to provide strong foundation for data science and application area related to it and understand the underlying core concepts and emerging technologies in data science.

Course Objectives:

1. To describe the life cycle of Data Science and computational environments for data scientists using Python.
2. To describe the fundamentals for exploring and managing data with Python.
3. To examine the various data analytics techniques for labeled/columnar data using Python.
4. To demonstrate a flexible range of data visualizations techniques in Python.
5. To describe the various Machine learning algorithms for data modeling with Python.

UNIT I INTRODUCTION TO DATA SCIENCE

9 hours

Introduction to Data Science and its importance - Data Science and Big data-, The life cycle of Data Science- The Art of Data Science - Work with data – data Cleaning, data Managing, datamanipulation. Establishing computational environments for data scientists using Python with IPython and Jupyter

UNIT II INTRODUCTION TO NUMPY

9 hours

NumPy Basics: Arrays and Vectorized Computation- The NumPy ndarray- Creating ndarrays- Data Types for ndarrays- Arithmetic with NumPy Arrays- Basic Indexing and Slicing - Boolean Indexing-Transposing Arrays and Swapping Axes. Universal Functions: Fast Element-Wise Array Functions- Mathematical and Statistical Methods-SortingUnique and Other Set Logic.

UNIT III DATA MANIPULATION WITH PYTHON

9 hours

Introduction to pandas Data Structures: Series, DataFrame, Essential Functionality: Dropping EntriesIndexing, Selection, and Filtering- Function Application and Mapping- Sorting and Ranking. Summarizing and Computing Descriptive Statistics- Unique Values, Value Counts, and Membership. Reading and Writing Data in Text Format.

UNIT IV DATA CLEANING, PREPARATION AND VISUALIZATION 9 hours

Data Cleaning and Preparation: Handling Missing Data - Data Transformation: Removing Duplicates, Transforming Data Using a Function or Mapping, Replacing Values, Detecting and Filtering Outliers- String Manipulation: Vectorized String Functions in pandas. Plotting with pandas: Line Plots, Bar Plots, Histograms and Density Plots, Scatter or Point Plots.

UNIT V MACHINE LEARNING USING PYTHON 9 hours

Introduction Machine Learning: Categories of Machine Learning algorithms, Dimensionality Reduction-Introducing ScikitApplication: Exploring Hand-written Digits. Feature Engineering-Naive Bayes Classification - Linear Regression - kMeans Clustering

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Identify phases involved in the life cycle of Data Science.
2. Preprocess and manage the data for efficient storage and manipulation in Python.
3. Realize the various data analytics techniques for labeled/columnar Data using PythonPandas.
4. Explore a flexible range of data visualizations approaches in Python.
5. Analyze various Machine learning algorithms for data modeling with Python.

Text Book(s)

1. Python Data Science Handbook-Essential Tools for Working with Data, Jake Vander Plas, O'Reilly Media, 2016
2. Data Science from Scratch: First Principles with Python, Joel Grus, O'Reilly, 2015.

Reference Books

1. Python for Data Analysis, Wes Mckinney, O'Reilly Media, 2013.
2. Field Cady, "Data Science Hand Book", John Wiley & Sons, 2017.
3. Fundamentals of Data Science, Samuel Burns, Amazon KDP printing and Publishing, 2019
4. Shai Vaingast, "Beginning Python Visualization Crafting Visual Transformation Scripts", Apress, 2nd edition, 2014

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

20CSO209 SENSORS AND SIGNAL CONDITIONING LABORATORY

Pre-requisite	20EEE201	L	T	P	C
		0	0	3	1.5

Course Description:

The aim of this lab is to fortify the students with an adequate work experience in the measurement of different quantities and also then expertise in handling the instruments involved.

Course Objectives:

- 1.To learn the basic conditioning circuits for various sensors and transducers
- 2.To understand the specifications of sensors and transducers.
- 3.To measuring mechanical quantities of sensors and transducers
- 4.To interpret on working condition of sensors and transducers.
- 5.Apply the use of sensors for measurement of displacement, force and pressure.

List of Programs:

1. Characteristics of Resistance Measurement system
2. Characteristics of Piezoelectric measurement system
3. Measurement of displacement using LVDT
4. Characteristics of Hall effect sensor
5. Measurement of strain using strain gauges
6. Measurement of torque using Strain gauges
7. Measurement using proximity sensors
8. Characteristics of capacitive measurement systems
9. Characteristics of Photovoltaic cell.
10. Design of Opto-coupler using photoelectric transducers
11. Interfacing of Voltage sensor to microcontroller and signal processing
12. Study of speed measuring devices and Gyroscope

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Design a signal conditioning circuits for transducers and test its characteristics.
2. Draw the specification of transducer for a given application.
3. Measuring mechanical quantities of sensors and transducers
4. Interpret on working condition of sensors and transducers.
- 5.Apply the use of sensors for measurement of displacement, force and pressure.

Dept. of Computer Science & Engineering (IoT)

Text Book(s)

2. B. C. Nakara & Chaudhry, "Instrumentation Measurement and Analysis", TATA McGraw-Hill, New Delhi.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech III Year I Semester

20CSO210 DATA SCIENCE FOR IOT LABORATORY

L T P C

0 0 3 1.5

Pre-requisite: Nil

Course Description:

This course is designed to equipping students to be able to use python programming for solving data science problems.

Course Objectives:

1. To train the students in solving computational problems
2. To elucidate solving mathematical problems using Python programming language
3. To understand the fundamentals of Python programming concepts and its applications.
4. Practical understanding of building different types of models and their evaluation

List of Programs:

1. Create NumPy arrays from Python Data Structures, Intrinsic NumPy objects and Random Functions.
2. Manipulation of NumPy arrays- Indexing, Slicing, Reshaping, Joining and Splitting.
3. Computation on NumPy arrays using Universal Functions and Mathematical methods.
4. Import a CSV file and perform various Statistical and Comparison operations on rows/columns.
5. Load an image file and do crop and flip operation using NumPy Indexing.
6. Write a program to compute summary statistics such as mean, median, mode, standard deviation and variance of the given different types of data.
7. Create Pandas Series and DataFrame from various inputs.
8. Import any CSV file to Pandas DataFrame and perform the following:
 - a. Visualize the first and last 10 records
 - b. Get the shape, index and column details.
 - c. Select/Delete the records(rows)/columns based on conditions.
 - d. Perform ranking and sorting operations.
 - e. Do required statistical operations on the given columns.
 - f. Find the count and uniqueness of the given categorical values.
 - g. Rename single/multiple columns
9. Import any CSV file to Pandas DataFrame and perform the following:
 - a. Handle missing data by detecting and dropping/ filling missing values.
 - b. Transform data using apply() and map() method.

Dept. of Computer Science & Engineering (IoT)

- c. Detect and filter outliers.
 - d. Perform Vectorized String operations on Pandas Series.
 - e. Visualize data using Line Plots, Bar Plots, Histograms, Density Plots and ScatterPlots
10. Write a program to demonstrate Linear Regression analysis with residual plots on a given data set
 11. Write a program to implement the Naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets
 12. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions using Python ML library classes
 13. Write a program to implement k-Means clustering algorithm to cluster the set of data stored in .CSV file. Compare the results of various “k” values for the quality of clustering.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Illustrate the use of various data structures.
2. Analyze and manipulate Data using Numpy and Pandas.
3. Creating static, animated, and interactive visualizations using Matplotlib.
4. Understand the implementation procedures for the machine learning algorithms.
5. Identify and apply Machine Learning algorithms to solve real-world problems using appropriate data sets.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Mandatory Course

III Year I Semester

20CE901 DISASTER MANAGEMENT

L T P C
2 0 0 0

Pre-requisite: None

Course Description:

The goal of this course is to expose the under graduate students regarding different types of disasters and preparedness needed to mitigate their effects. The course matrix will cover various natural, biological, chemical and emerging hazards and risks that may cause property, loss of lives, and livestock's. Thus, the future engineers will understand the social responsibility for the preparedness and mitigation of the damages caused by the disasters.

Course Objectives:

1. To make aware the students about disasters and their impact on living beings.
2. To ensure the students for the understanding on vulnerability, disasters, disaster prevention
3. and risk reduction.
4. To gain a preliminary understanding of approaches for the Disaster Risk Reduction (DRR)
5. To enhance awareness of institutional processes available in the country for the disaster risk mitigation.

UNIT I INTRODUCTION

6 hours

Introduction, Etymology of disaster, Concepts and definitions: disaster, hazard, vulnerability, risks, Resilience, prevention and mitigation.

UNIT II TYPES OF DISASTERS

6 hours

Types of Disaster; natural disasters (earthquakes, volcanoes, forest fires and explosions, heat and cold waves, floods, draught, cyclones, tsunami, landslides, soil erosion); manmade disasters (industrial pollution, artificial flooding in urban areas, nuclear radiation, chemical spills, transportation accidents, terrorist strikes, etc.), hazard and vulnerability profile of India, mountain and coastal areas, ecological fragility.

UNIT III DISASTER IMPACTS

6 hours

Disaster Impacts (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

UNIT IV DISASTER RISK MITIGATION MEASURES

6 hours

Disaster Risk Reduction (DRR) - Disaster management- four phase approach; prevention, mitigation, preparedness, relief and recovery; structural and non-structural measures; risk analysis, vulnerability and capacity assessment; early warning systems, Post disaster environmental response (water, sanitation, food safety, waste management, disease control, security, communications), DRR programmers in India and the activities of National Disaster Management Authority. Roles and responsibilities of government, community, local institutions, NGOs and other stakeholders; Policies and legislation for disaster risk reduction.

UNIT V IMPACT OF DEVELOPMENTAL ACTIVITIES

6 hours

Disasters, Environment and Development - Factors affecting vulnerability such as impact of developmental projects and environmental modifications (including of dams, landuse changes, urbanization etc.), sustainable and environmental friendly recovery; reconstruction and development methods.

Course Outcomes:

The students after completing the course will be able to:

1. Explain various disaster concepts
2. Differentiate between categories of disasters
3. Analyze impact of various types of disasters
4. Select disaster risk mitigation measures
5. Identify the impact of development activities

Text Books:

B. Tech III Year II Semester

20CSO113 EMBEDDED SYSTEMS

		L	T	P	C
Pre-requisite	Nil	3	0	0	3

Course Description:

This course provides introduction to embedded systems consisting of various processors and interfaces. It also describes concepts of real time operating systems.

Course Objectives:

1. To provide the knowledge on embedded systems and Architectures of family of 8051 microcontrollers and its interfacing techniques
2. To study about software concepts, computing Platforms of Embedded Systems.
3. To study and understand the advanced computer architectures like ARM etc.
4. To study about Architecture, Development tools of software and RTOS Concepts.

UNIT I INTRODUCTION TO EMBEDDED SYSTEMS 9 hours

Definition of Embedded System, Embedded Systems Vs General Computing Systems, Classification of Embedded Systems, Major Application Areas, Purpose of Embedded Systems, Characteristics and Quality Attributes of Embedded Systems. RISC and CISC Architectures. Memories, I/O Devices, Software in Embedded Systems

UNIT II 8051 MICROCONTROLLER AND ITS PROGRAMMING 9 hours

Architecture of microcontroller-8051 Microcontroller- internal and external memories – Interrupt Vectors and Priority -counters and timers-synchronous serial-cum asynchronous serial communication-interrupts. Addressing modes of 8051, Instruction set of 8051, Assembly Language Programming with 8051 using Keil. Embedded C vs Assembly language.

UNIT III INTERFACING 9 hours

External Memories - Switch, keypad and key board Interfacing- LED and Array LEDs - Interfacing of LCDs, Relays, DC Motors, Stepper Motors, Analog input and analog output interfacing, Emulator, ICE and Debuggers- Device Driver Concepts

UNIT IV RTOS 9 hours

Operating System Basics, Types of Operating Systems, Tasks, Process and Threads, Multiprocessing and Multitasking, Task Scheduling. Task Communication, Task Synchronization Task Communication /Synchronization Issues, Task Synchronization Techniques, Device Drivers, How to Choose an RTOS.

UNIT V ADVANCED MICROCONTROLLERS

9 hours

ARM Design Philosophy, ARM Architecture (LPC 2148) and Organization, Registers, Program Status Register, Instruction Pipeline, Interrupts and Vector Table, ARM/ Thumb Instruction set, ARM Assembly Programming and C Programming Concepts.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Gain knowledge of the Embedded System concepts and its Architectures of family of 8051 microcontrollers and its interfacing techniques.
2. Apply software concepts, computing Platforms of Embedded Systems.
3. Design real time embedded systems using the concepts of RTOS.
4. Understand the different Software Development Tools and RTOS Concepts
5. Become aware of interrupts, hyper threading and software optimization.

Text Book(s)

1. Introduction to Embedded Systems - Shibu K.V, Mc Graw Hill.
2. ARM Systems Developer's Guides- Designing & Optimizing System Software – Andrew N. Sloss, Dominic Symes, Chris Wright, 2008, Elsevier.
3. Raj Kamal, “Microcontroller Architecture, programming, Interfacing and System design” Pearson Education, New Delhi.

3. Wolf, Wayne, Computers as Components – Principles of Embedded Computing System Design, Elsevier, Second Edition, 2008.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech III Year II Semester

20CSO114 WEB TECHNOLOGIES

L T P C

3 0 0 3

Pre-requisite **NIL**

Course Description:

This course will expose students to the techniques used in programming web pages for interactive content. The course begins by reviewing basic web technologies (HTML, CSS style sheets) and exploring the use of event-driven programming in JavaScript to add interactive elements such as buttons and text fields to web pages. Next, students will use AJAX tools to build web pages that connect to servers like Google to dynamically access data (maps, search results, videos, images, etc.). Finally, the course will show students how to write their own xml code to provide access to a custom database.

Course Objectives:

1. To introduce Markup Languages for client side scripting
2. To introduce JavaScript and DOM and Java Servlets with Java
3. To introduce XML and processing of XML Data with Java
4. To introduce Server side programming with Java Servlets and JSP
5. To introduce various java web services and SOAP

UNIT I WEB ESSENTIALS

9 hours

Web Essentials: Clients, Servers, and Communication. The Internet-Basic Internet Protocols -The World Wide Web-HTTP request message-response message-Web Clients Web Servers-Case Study. Markup Languages: XHTML. An Introduction to HTML History-Versions-Basic XHTML Syntax and Semantics-Some Fundamental HTML Elements-Relative URLs-Lists-tables-Frames-Forms-XML Creating HTML Documents-Case Study.

UNIT II STYLE SHEETS AND CLIENT SIDE PROGRAMMING

9 hours

Style Sheets: CSS-Introduction to Cascading Style Sheets-Features-Core Syntax-Style Sheets and HTML Style Rule Cascading and Inheritance-Text Properties-Box Model-Normal Flow Box Layout-Beyond the Normal Flow-Other Properties-Case Study. Client-Side Programming: The JavaScript Language-History and Versions Introduction to JavaScript in Perspective-Syntax-Variables and Data Types-Statements-Operators-Literals-Functions-Objects-Arrays-Built-in Objects - JavaScript Debuggers.

Dept. of Computer Science & Engineering (IoT)

UNIT III HOST OBJECTS

9 hours

Host Objects: Browsers and the DOM-Introduction to the Document Object Model DOM History and Levels-Intrinsic Event Handling-Modifying Element Style-The Document Tree-DOM Event Handling-Accommodating Noncompliant Browsers Properties of Window-Case Study. Server-Side Programming: Java Servlets- Architecture -Overview-A Servlet-Generating Dynamic Content-Life Cycle- Parameter Data-Sessions-Cookies- URL Rewriting-Other Capabilities-Data Storage Servlets and Concurrency-Case Study- Related Technologies.

UNIT IV REPRESENTING WEB DATA

9 hours

Representing Web Data: XML-Documents and Vocabularies-Versions and Declaration- Namespaces JavaScript and XML: Ajax-DOM based XML processing Event-oriented Parsing: SAX-Transforming XML Documents-Selecting XML Data: XPATH-Template based Transformations: XSLT-Displaying XML Documents in Browsers-Case Study-Related Technologies. Separating Programming and Presentation: JSP Technology-Introduction-JSP and Servlets-Running JSP Applications Basic JSP- JavaBeans Classes and JSP-Tag Libraries and Files-Support for the Model-View-Controller Paradigm.

UNIT V WEB SERVICES

9 hours

Web Services: JAX-RPC-Concepts-Writing a Java Web Service-Writing a Java Web Service Client-Describing Web Services: WSDL- Representing Data Types: XML Schema-communicating Object Data: SOAP Related Technologies-Software Installation-Storing Java Objects as Files-Databases and Java Servlets, Web Applications and Security.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Gain knowledge of client side scripting, validation of forms and AJAX programming
2. Have understanding of server side scripting with JSP language
3. Have understanding of what is XML and how to parse and use XML Data with Java
4. To introduce Server side programming with Java Servlets and JSP
5. Design and implement the various Web services concepts of JAX-RPC

Text Book(s)

Mode of Evaluation: Assignments, Internal Mid Examinations, External End Examination.

B. Tech III Year II Semester

20CSO115 BIG DATA ANALYTICS

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

This course is aimed to provide basic understanding business decisions and fundamental concepts of Big data analysis. This Course covers introduction to analyse the big data using intelligent techniques and visualization techniques.

Course Objectives:

1. To optimize business decisions and create competitive advantage with Big Data Analytics.
2. To explore the fundamental concepts of Big Data Analytics.
3. To learn to analyze the big data using intelligent techniques.
4. To understand the various search methods and visualization techniques.
5. To learn to machine learning techniques with big data.

UNIT I INTRODUCTION TO BIG DATA 9 hours

Introduction to big data : Introduction to Big Data Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting.

UNIT II BIG DATA ANALYTICS OF STREAM DATA MODEL AND ARCHITECTURE 9 hours

Mining data streams : Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform (RTAP) Applications - Case Studies - Real Time Sentiment Analysis- Stock Market Predictions.

UNIT III INTRODUCTION TO BIG DATA FOR HADOOP 9 hours

Hadoop: History of Hadoop- the Hadoop Distributed File System – Components of Hadoop Analysing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-Java interfaces to HDFS Basics- Developing a Map Reduce Application-How MapReduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features- Hadoop environment.

UNIT IV INTRODUCTION TO BIG DATA APPLICATIONS 9 hours

Frameworks: Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services – HiveQL – Querying Data in Hive - fundamentals of HBase and ZooKeeper - IBM InfoSphere Big Insights and Streams.

UNIT V INTRODUCTION OF BIG DATA MACHINE LEARNING

9 hours

Predictive Analytics- Simple linear regression- Multiple linear regression- Interpretation of regression coefficients. Visualizations - Visual data analysis techniques- interaction techniques - Systems and applications.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand the fundamentals of various Big Data Analytics techniques.
2. Understand the stream data model and real time analytics using architecture
3. Analyze the HADOOP and Map Reduce technologies associated with Big Data Analytics.
4. Work with big data platform and explore the big data analytics techniques business applications.
5. Understand the concept of big data analytics using machine learning.

2. Bart Baesens “Analytics in a Big Data World: The Essential Guide to Data Science and its Applications (WILEY Big Data Series)”, John Wiley & Sons,2014

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

20CSO211 EMBEDDED SYSTEMS LABORATORY

Course Prerequisite: Nil

L T P C
0 0 3 1.5

Course Description:

This course provides introduction to embedded systems consisting of various processors and interfaces. It also describes concepts of real time operating systems.

Course Objectives:

1. To provide the knowledge on embedded systems and Architectures of family of 8051 microcontrollers and its interfacing techniques.
2. To study about software Concepts, Computing Platforms of Embedded Systems.
3. To study and understand the advanced computer architectures like ARM etc.
4. To study about Architecture, Development tools of software and RTOS Concepts.

LIST OF EXPERIMENTS

Part A

1. Write a 8051 Program to
 - a. Read inputs from switches.
 - b. To make LEDs blink.
2. Write an 8051 Program for interfacing 4x4 Matrix Keyboard.
3. Write an 8051 Program to Display Message in LCD 8 Bit Mode.
4. Write an ALP Program for serial communication (UART).
5. Write a program to Interfacing ADC and DAC to 8051.
6. Write a program to Interfacing Stepper motor.
7. Familiarization of Microcontroller Operating System (RTOS).

Part B: Experiments with ARM Board

1. Familiarization with ARM board.
2. RS-232C interface with PC.
3. Traffic Light Controller.
4. SPI/CAN interface.
5. ADC interfacing.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

- 1.** Understand the embedded System Concepts and its Architectures of family of 8051Microcontrollers and its interfacing techniques.
- 2.** Implement the software Concepts, Computing Platforms of Embedded Systems.
- 3.** Apply the advanced computer architectures for embedded system design.
- 4.** Use Software Development Tools.
- 5.** Familiarize with Microcontroller Operating system (RTOS)

Mode of Evaluation: Continuous Internal Evaluation, Practical Examination.

Pre-requisite NIL

Course Description:

This course is designed to provide basic understanding on Web page design. The course material further used for developing any web based applications in which database is back end. Course covers from all basic and advanced queries of MYSQL programs and real time implementation.

Course Objectives:

1. To understand the concepts of Web page design using HTML/XML and style sheets
2. To understand the concepts of creation of user interfaces using Java frames.
3. To Learn to create dynamic web pages using server side scripting.
4. To Learn to write Client Server applications.
5. To provide sufficient skill to utilize the various applications with AJAX

List of Programs:

1. Create a web page with the following using HTML.
 - a) To embed an image map in a web page.
 - b) To fix the hot spots.
 - c) Show all the related information when the hot spots are clicked.
2. Create a web page with the following
 - a. Cascading style sheets.
 - b. Embedded style sheets.
 - c. Inline style sheets. Use our college information for the web pages
3. Create and save an XML document at the server, which contains 10 users Information. Write a Program, which takes user Id as an input and returns the User details by taking the user information from the XML document.
4. Client Side Scripts for Validating Web Form Controls using DHTML.
5. To Write programs in Java using Servlets:
 - a) To invoke servlets from HTML forms.
 - b) Session Tracking.
6. Write programs in Java to create three-tier applications using JSP and Databases
 - a. For conducting online examination
 - b. For displaying student mark list. Assume that student information is available in a database which has been stored in a database server.
7. Programs using XML – Schema – XSLT/XSL.
8. Programs using DOM and SAX parsers.

Dept. of Computer Science & Engineering (IoT)

9. To Write a programs in Java using Ajax.

10. Consider a case where we have two web Services- an airline service and a travel agent and the travel agent is searching for an airline. Implement this scenario using Web Services and Database.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Design Web pages using HTML/DHTML and style sheets.
2. Create dynamic web pages using server side scripting.
3. Implement the Client Server applications.
4. Implement and use the frameworks JSP Strut.
5. Design and develop a real world application with AJAX

1. Robert. W. Sebesta, "Programming the World Wide Web", Fourth Edition, Pearson Education, 2007 .

Reference Books

1. Deitel, Deitel, Goldberg, "Internet & World Wide Web How To Program", Third Edition, Pearson Education, 2006.
2. Marty Hall and Larry Brown, "Core Web Programming" Second Edition, Volume I and II, Pearson Education, 2001.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

B. Tech III Year II Semester

20CSO213 BIG DATA ANALYTICS LABORATORY

L T P C

0 0 3 1.5

Pre-requisite: Nil

Course Description:

This course is designed an in-depth understanding of terminologies and the core concepts behind big data problems, applications, systems and the techniques that underlie today's big data computing technologies.

Course Objectives:

1. Optimize business decisions and create competitive advantage with Big Data analytics.
2. Imparting the architectural concepts of Hadoop and introducing map reduce paradigm.
3. Introducing Java concepts required for developing map reduce programs.
4. Derive business benefit from unstructured data.

List of Programs:

1. Study of Big data tools and Installation.
2. Implement the following file management tasks in Hadoop:
 - a. Adding files and directories
 - b. Retrieving files
 - c. Deleting files
3. Write a java map-reduce program for counting the number of occurrences of each word in a text file.
4. Implement Stop word elimination problem with the following input and output:
Input: A large textual file containing one sentence pers line and A small file containing a set of stop words (One stop word per line)
Output: A textual file containing the same sentences of the large input file without the words appearing in the small file.
5. Analysis the Purchase data set with the following criteria
 - a. Instead of breaking the sales down by store, give us a sales breakdown by product category across all of our stores
 - b. What is the value of total sales for the following categories?
 - i. Toys
 - ii. Consumer Electronics
 - c. Find the monetary value for the highest individual sale for each separate store

Dept. of Computer Science & Engineering (IoT)

6. Write a java map-reduce program for mines healthcare data and perform various analysis on healthcare dataset.
7. Write Pig Latin scripts to illustrate Load, Store, Describe, Dump operators.
8. Write Pig Latin scripts to illustrate Group, Co-group, Filter Operators.
9. Write Pig Latin scripts to illustrate join, union and Split Operators.
10. Write a Pig Latin scripts for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg).
11. Develop a Map-reduce programming with Hive to create, alter, and drop databases, tables, views, functions, and indexes.
12. Install, Deploy & configure Apache Spark Cluster. Run apache spark applications using Scala.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Preparing for data summarization, query, and analysis.
2. Applying data modelling techniques to large data sets
3. Creating applications for Big Data analytics
4. Building a complete business data analytic solution
5. Understand to concept of Scala application framework.

Mode of Evaluation: Continuous Internal Evaluation and End Semester Examination

Dept. of Computer Science & Engineering (IoT)

Mandatory Course

B. Tech III Year II Semester

20HUM902** /20HUM102# UNIVERSAL HUMAN VALUES

L	T	P	C
2**/3#	0	0	0**/3#

Pre-requisite None.

Course Description:

This course discusses student's role in their family and briefly touches issues related to their role in the society and the nature.

Course Objectives:

This course enables students to

1. Understand Happiness and Prosperity correctly and basic Human Aspirations
2. Able to self-verify the Harmony in the Human Being
3. Visualize a universal harmonious order in society which leads to Undivided Society at Universal Order- from family to world family.
4. Understanding Harmony in the Nature and Existence - Whole existence as Coexistence
5. Implicate the UHV in professional ethics.

UNIT I THE PROCESS FOR VALUE EDUCATION - BASIC HUMAN ASPIRATIONS

8 hours

- L1: Purpose and motivation for the course, recapitulation from Universal Human Values-I
L2: Self-Exploration—what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration
L3: Continuous Happiness and Prosperity- A look at basic Human Aspirations
L4: Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations of every human being with their correct priority
L5: Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario
L6: Method to fulfil the above human aspirations: understanding and living in harmony at various levels.
T1 & T2: Discussion on natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

UNIT II UNDERSTANDING HARMONY IN THE HUMAN BEING - HARMONY IN MYSELF!

8 hours

- L7: Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
L8: Understanding the needs of Self ('I') and 'Body' - happiness and physical facility
L9: Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)
L10: Understanding the characteristics and activities of 'I' and harmony in 'I'
L11: Understanding the harmony of I with the Body: Self-regulation and Health; correct appraisal of Physical needs, meaning of Prosperity in detail.
L12: Programs to ensure Self-regulation and Health.
T3 & T4: Discussion on the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease

UNIT III UNDERSTANDING HARMONY IN THE FAMILY AND SOCIETY 7 hours

- L13: Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship
- L14: Understanding the meaning of Trust; Difference between intention and competence
- L15: Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship
- L16: Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals
- L17: Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.
- T5 & T6: Reflection on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives

UNIT IV UNDERSTANDING HARMONY IN THE NATURE AND EXISTENCE 6 hours

- L18: Understanding the harmony in the Nature
- L19: Interconnectedness and mutual fulfilment among the four orders of nature- recyclability and self- regulation in nature
- L20: Understanding Existence as Co-existence of mutually interacting units in all-pervasive space
- L21: Holistic perception of harmony at all levels of existence.
- T7 & T8: Discussion on human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

UNIT V IMPLICATIONS OF HOLISTIC UNDERSTANDING OF HARMONY ON PROFESSIONAL ETHICS 11 hours

- L22: Natural acceptance of human values
- L23: Definitiveness of Ethical Human Conduct
- L24: Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
- L25; Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people- friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
- L26: Case studies of typical holistic technologies, management models and production systems
- L27: Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations
- L28: Sum up.
- T9-T14: Exercises and Case Studies For e.g. Individual discussion on the conduct as an engineer or scientist etc.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understood the natural acceptance in human being as the innate acceptance,
2. More aware of themselves,
3. Maintain harmony with family and society by recognizing Harmony in Human-Human Relationship,
4. Try to get Harmony in the Nature and Existence by realizing existence as Coexistence
5. More responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind with better critical ability.

Text Book(s)

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010

Reference Books

1. Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999.
2. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.
3. The Story of Stuff (Book).
4. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi

Mode of Evaluation: Assignment / Quiz, Classroom participation, Mini project / Report, Internal Mid Examination and external semester end examination.

Open Elective - II

Open Elective - II

20MAT301 ADVANCED NUMERICAL METHODS

L T P C
3 0 0 3

Pre-requisite: 20MAT101, 20MAT107, 20MAT110

Course Description:

This course reviews and continues the study of computational techniques for evaluating interpolations, derivatives and integrals; solving system of algebraic equations, transcendental equations, ordinary differential equations and partial differential equations. The course emphasizes on numerical and mathematical methods of solutions with appropriate error analysis. The students use MATLAB as the computer language to obtain solutions to a few assigned problems.

Course Objectives:

1. To introduce computation methods of solving algebraic and transcendental equations.
2. To avail the basics of numerical techniques for solving the system of linear equations
3. To familiarize the knowledge of interpolation and numerical calculus.
4. To use numerical calculus for solving ordinary differential equations.
5. To introduce the computational techniques for solving partial differential equations.

UNIT I SOLUTIONS OF ALGEBRAIC AND TRANSCENDENTAL EQUATIONS 9 hours

Introduction to MATLAB, errors, sources of errors, floating point arithmetic, significant digits, relative error, propagation of errors, how to avoid loss of significant digits, evaluation of polynomial - Bisection method, False-position method, Secant method, Fixed-point iteration method, Newton's method – single and multiple roots, Order of convergence of the methods.

Exercises of Bisection method and Newton's method through MATLAB

UNIT II SOLUTIONS OF SYSTEM OF ALGEBRAIC EQUATIONS 9 hours

Gaussian Elimination, LU decomposition, Thomas algorithm for the tridiagonal systems, Norms- Euclidean, mini-maxi, Frobenius and 1-,2- and ∞ -norms, Condition numbers and errors in computed solutions. Jacobi's method, Gauss-Seidel method, Power method for obtaining eigenvalues and eigenvectors of matrices. Exercises of Gaussian Elimination and Gauss-Seidel method through MATLAB

UNIT III INTERPOLATION & NUMERICAL CALCULUS 9 hours

Existence and Uniqueness of interpolating polynomial, Lagrange polynomials, Divided differences, Evenly spaced points, Error of interpolation, cubic spline, Inverse interpolation, Derivatives from difference table, Higher order derivatives, Trapezoidal rule, Simpsons rule, a composite formula, Gaussian Quadrature - Exercises of Divided differences and Simpson's rule through MATLAB

UNIT IV NUMERICAL SOLUTIONS TO ORDINARY DIFFERENTIAL EQUATIONS 9 hours

Taylor series method, Euler and Modified Euler's method, Runge-Kutta methods for initial value problems, Shooting method, Finite difference method for boundary value problems.

Exercises of Runge-Kutta method and Shooting method through MATLAB.

UNIT V NUMERICAL SOLUTION TO PARTIAL DIFFERENTIAL EQUATIONS

9 hours

Finite difference methods for one-dimensional Wave and Heat equations; Laplace and Poisson equations (five-point formula) - Exercises of Finite difference method (forward, central and backward differentiation) and Crank-Nicolson method through MATLAB

Course Outcomes:

At the end of the course, students will be able to:

1. Solve the system of algebraic and transcendental equations.
2. Apply the numerical techniques to find the solution to system of equations.
3. Calculate and analyze the rate of variations and numerical sum of such changes using numerical calculus relevant to the field of Engineering.
4. Find the accurate numerical solutions to ordinary differential equations representing some Engineering problems.
5. Compute the solutions for engineering problems represented by partial differential equations.

Text Books:

1. Curtis F. Gerald, Patrick O. Wheatley, Applied Numerical Analysis, Pearson Education, 7th Edition, 2003.
2. S.S. Sastry, Introductory methods of numerical analysis, PHI, 4th Edition, 2005.

4. Applied Numerical Methods with MATLAB for Engineers and Scientists by Steven C. Chapra, 3rd ed., Mc Graw Hill, 2012.
5. M.K. Jain, S.R.K. Iyengar and R.K. Jain, Numerical Methods for Scientific and Engineering, New Age International Ltd., 5th Edition, 2010.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - II

20MAT302 ENGINEERING OPTIMIZATION

L T P C

3 0 0 3

Pre-requisite: 20MAT101, 20MAT106, 20MAT104, 20MAT108, 20MAT109, 20MAT110.

Course Description:

Unconstrained and constrained optimization, Linear programming problem, transportation and assignment problems, dynamic programming problem, project management and queuing models.

Course Objectives:

1. Understand the optimization techniques for solving engineering problems.
2. Formulate and solve linear programming problem.
3. Obtain the optimal solution for transportation and assignment problems.
4. Avail knowledge to solve dynamic programming problem using recursive relations.
5. Analyze the techniques of project management and queuing models.

UNIT I CLASSICAL OPTIMIZATION

9 hours

Introduction to optimization, unconstrained optimization with single variable and multi variable. Constrained multivariable optimization with equality constraints- Lagrange multipliers method, constrained multivariable optimization with inequality constraints - Kuhn-Tucker conditions.

UNIT II LINEAR PROGRAMMING PROBLEM

9 hours

Linear Programming Problem (LPP), Mathematical formulation, graphical solution, simplex method. Artificial variable technique - Big M-method and two phase simplex method. Duality, dual Simplex method.

UNIT III TRANSPORTATION PROBLEM AND ASSIGNMENT PROBLEM

9 hours

Transportation problem: definition and algorithm, transshipment problem. Assignment problem, travelling salesman problem.

UNIT IV DYNAMIC PROGRAMMING

9 hours

Introduction, developing optimal decision policy, Dynamic Programming Problem (DPP) under certainty, DPP approach for solving LPP.

UNIT V PROJECT MANAGEMENT AND QUEUING MODELS

9 hours

Network analysis: Network representation, Critical Path Method (CPM) and Project Evolutionary and Review Technique (PERT). Introduction to queuing system, single server queuing models (M/M/1) :(∞ /FCFS), (M/M/1): (N/FCFS).

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Understood the importance of unconstrained and constrained optimization to solve engineering problems.
2. Get an idea about the linear programming techniques.
3. Solve transportation and assignment problems in engineering situations.
4. Apply the Bellman principle of optimality to solve dynamic programming problem.
5. Analyze the problems of network analysis for project management and Queuing systems engineering & industry.

Text Books:

1. J K Sharma, Operations Research: Theory and Practice, Macmillan Publishers India Ltd, 5th edition, 2013.
2. B.S. Grewal, Higher Engineering Mathematics, 43rd edition (2014), Khanna publishers.

2. FS Hillier and GJ Lieberman, Introduction to Operations Research, TMH, 8/E, 2006.
3. JC Pant, Introduction to Optimization: Operations Research, Jain Brothers, New, 6/E, 2004.
4. A Ravindran, DT Philips and JJ Solberg, Operations Research: Principles and Practice, John Wiley & Sons, Singapore, 2nd edition.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - II

20PHY301 OPTICAL PHYSICS AND ITS APPLICATIONS

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

The course will cover Geometrical optics, Aberrations, Physical Optics, Diffraction and Optical fibers.

Course Objectives:

Students will

1. Knowledge of basic principles and concepts in optics and the techniques used to deal with them.
2. Explain the limitations associated with spherical and chromatic aberration
3. Describe optical systems such as microscopes and telescopes with reference to parameters such as angular magnification and depth of field
4. Provide students with a working knowledge of optical physics, including interference, diffraction and physical optics.
5. Introduce construction and concepts of basic fiber optic communication system and to make the students learn about its important applications for societal needs.

UNIT I INTRODUCTION

9 hours

Corpuscular and wave theory, Fermat's principle, Matrices for translation, refraction and reflection, Unit and nodal planes, Eigenvalues and Eigenvectors.

UNIT II ABERRATIONS AND OPTICAL INSTRUMENTS

9 hours

Types of aberrations, Chromatic and monochromatic aberrations. Different types of monochromatic aberrations. Simple and Compound microscopes, Astronomical and Terrestrial telescopes. Ramsden's and Huygens' eye pieces.

UNIT III WAVE OPTICS & INTERFERENCE

9 hours

Huygens's principle, Superposition of waves, Fourier transforms, representation of slits and apertures, Two beam interference by Division of wave front. Applications of Interference, Nonlinear interaction of light with matter (self-study).

UNIT IV DIFFRACTION & POLARISATION

9 hours

Fraunhofer diffraction, Diffraction from single slit, double slit & multiple slits, Fresnel half-period zones, Zone plate, Applications of diffraction, Polarization, Malus' law, double refraction. Applications of polarization.

UNIT V FIBER OPTICS

9 hours

Construction and working principle of optical fibers, Numerical aperture and acceptance angle, Types of optical fibers. Attenuation and losses in optical fibers, Analog and Digital optical fiber communication system. Applications of optical fibers in communications, sensors and medicine.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Recollect the fundamental characteristics of light and their mathematical principles.
2. Learn the principles of superposition, Interference and Diffraction
3. Understand nonlinear optics and photonics phenomena.
4. Be exposed to the application of optical techniques in cutting edge research areas.
5. Describe the basic laser physics, working of lasers and principle of propagation of light in optical fibers.

Text Books:

1. Optics by Ghatak, 4th Edition, Tata McGraw Hill (2011).

Reference Books

1. Optics by Lipson, Lipson & Lipson, 4th Edition, Cambridge Univ Press (2010).
2. Optics by Hecht, 4th Edition, Addison-Wesley (2002).

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20PHY302 LASER PHYSICS AND ADVANCED LASER TECHNOLOGY

L T P C
3 0 0 3

Pre-requisite: Basic knowledge of atomic structure at intermediate (10+2) level is sufficient

Course Description:

Laser usage is rampant in various technological applications. Several fields gaining attention in the usage of lasers. This course covers the introduction to the theory and mechanism of laser action, various types of lasers and their applications and future use.

Course Objectives:

1. Make the student to understand the detailed principles of various lasers.
2. Profound understanding of different variety of lasers will provide them to think of superior selection and usage of lasers in practical technological applications.
3. Students are aware of latest developments in certain areas of Laser technology which have important applications for societal needs.
4. Explain how material processing is accomplished with lasers. Estimate laser operation parameters for material processing.
5. Exposure about Lasers applications in engineering, communications, spectroscopy and material process etc.

UNIT I INTRODUCTION TO LASER TECHNOLOGY 9 hours

Laser characteristics, The Einstein Coefficients, Absorption and Emission Cross Sections, Spontaneous and Stimulated emission of radiation, Population inversion, Methods of Population Inversion, Laser Rate Equations, stable two minor optical resonators, Mode selection, Gain in the regenerative laser cavity.

UNIT II GASES AND LIQUIDS LASING MEDIUM 9 hours

Energy levels & Radiative properties of Atoms and molecules; Atomic lasers: He-Ne laser, Argon Ion laser; Molecular Lasers: Carbon dioxide laser, Liquid energy levels and their radiative properties, Organic Dye laser.

UNIT III SOLID STATE LASERS 9 hours

Energy Levels in solids-dielectric medium, Solid-state lasing materials, Narrow line width laser materials, broad band line width laser materials, solid state lasers: Nd:YAG, Nd:YLF; Ti:Sapphire (introduction only)

Energy Levels in solids-semiconductor medium, direct and indirect band gap semiconductors, Semiconductor diode laser, Quantum dot lasers (Introduction only);

UNIT IV PULSED OPERATION OF LASERS 9 hours

Nanosecond: Q-Switching, Techniques of Q-Switching: electro-optic, Acousto-Optic.

Femtosecond: Relationship between pulse duration and Spectral Width, Passive mode-locking, Active mode locking, Kerr lens mode locking, Amplification of femtosecond pulses.

UNIT V LASER APPLICATIONS

9 hours

Laser processing of materials: laser cutting, laser drilling, welding; Lasers in metrology- Accurate measurement of length, light wave communications; Laser spectroscopy: Laser fluorescence and Raman scattering.

Course Outcomes:

Upon completion of this course the students shall be able to:

1. Understand the principle of phenomenon of laser and identify the operating principle involved in various type of lasers.
2. Estimate stability requirements in producing laser light by different types of sources
3. Differentiate or list the various types of lasers and their means of excitation.
4. Assess (Identify) which laser would best meet the need for a particular industrial or research task.
5. Student can knowledge of latest technological developments in laser technology. Femtosecond laser etc.

Text Books:

1. Laser Fundamentals: William T Silfvast. Cambridge Publication.
2. Laser Theory and Applications: A.K. Ghatak and K. Thyagarajan, Springer
3. Femtosecond Laser Pulses Principles and Experiments: Claude Rullière, Springer
4. Principles of Laser: O. Svelto
5. Laser Physics: Peter W Miloni, Joseph H Eberly.

Reference Books

1. Solid State Laser Engineering: Walter Koechner. Springer series in optical sciences.
2. Ultrafast Optics, Andrew M. Weiner
3. Laser spectroscopy: Demtroder
4. Laser Applications: Monte Ross

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - II

20CHE301 INTRODUCTION TO PETROLEUM INDUSTRY

L T P C
3 0 0 3

Pre-requisite: Basic Chemistry at Intermediate or equivalent level.

Course Description:

It deals with basic principles of petroleum engineering and the processes involved in petroleum industry.

Course Objectives:

Students will

1. To understand the basic concepts of crude oil, distillation process, internals, petroleum products and their properties, Instruments used for fuel testing.
2. To understand the type of chemicals and their application in petroleum industry.
3. To introduce the basic principles of hydroprocessing and fluid catalytic cracking and familiarize the processes involved there.
4. To familiarize the basic concepts of catalysis, bioprocesses in the refinery.
5. Health, environment, process safety and management in petroleum companies.

UNIT I BASIC PROCESSES IN PETROLEUM REFINING AND FUEL TESTING 9 hours

Source of Crude oils and types, Overview of refinery process, Atmospheric Distillation, Vacuum distillation, Desalter, Desulphurization, Cracking, catalysis, Effluent treatment plant. Density, viscosity, pour point, flashpoint, octane number, cetane number, Fire point, Chromatography, Ductility, Water content, Sulphur analysis, MCRT, SARA, HFRR, calorific value etc.

UNIT II CHEMICALS AND THEIR IMPORTANCE IN PETROLEUM INDUSTRY 9 hours

Types of products in the refinery and their structural properties, Neutralizing amines, Corrosion inhibitors, Multifunctional additives, viscosity improvers, drag reducing agents, antioxidants, Lubricity improvers, Antifoam additives, Oil spill absorbers, Dispersants and their applications, Types of Catalysts used in the refinery, Chemicals for ETP plant.

UNIT III ROLE OF HYDROPROCESSING AND FLUID CATALYTIC CRACKING IN PETROLEUM INDUSTRY 9 hours

Objectives, Hydrocracking Reactions, Hydrocracking feedstocks, Modes of Hydrocracking, Effects of process variables, Hydro treating process and catalysts Resid hydro processing, FCC Cracking, Catalyst coking and regeneration, Design concepts, New Designs for Fluidized-Bed Catalytic Cracking Units

UNIT IV ROLE OF CATALYSTS, BIOPROCESSES IN PETROLEUM INDUSTRY 9 hours

Types of catalyst and their importance, Design of catalyst, selection of catalyst, Catalytic processes. Introduction to biotechnology, oil recovery from reservoirs, refining of petroleum using biodesulphurisation, Bioremediation, commercial processes for bioethanol, propanol.

**UNIT V HEALTH, ENVIRONMENT, PROCESS SAFETY AND
MANAGEMENT IN PETROLEUM INDUSTRY**

9 hours

Safety policy, Personal protective equipment, Different type of extinguishers, Types of gloves and their application, Hydrants and their role, Safety indicators, Safety contact, Environmental pollution, precaution and first aid, precautions safety, Occupational safety and management, different elements and their role.

Course Outcomes:

At the end of the course, students will be able to:

1. Be able to understand the overview of petroleum industry
2. Be able to understand the concepts of crude oil, types of crude oils, properties of fuels such as octane number, cetane number, viscosity, density etc. Instruments.
3. Be familiarized with importance and their use of chemicals involved in the petroleum industry.
4. Be familiarized with the processes involved in hydroprocessing and fluid catalytic cracking.
5. Be familiarized the types of catalysts and bioprocesses in the petroleum industry.
6. Understanding the PPE, different types of extinguishers, First aid, process safety and management in the petroleum industry.

Text Books:

1. Mohamed A. Fahim, Taher A. Al-Sahhaf, Amal Elkilani, Fundamentals of Petroleum Refining, Elsevier, 2009
2. David T Day, Handbook of the Petroleum Industry, Volume 1, ISBN: 137595962X, CHIZINE PUBN, 2017
3. S. P. Srivastava Jenő Hancsók, *Fuels and fuel additives*, Wiley VCH Verlag GmbH & Co, Weinheim, 2004.
4. Robert O. Anderson, *Fundamentals of the Petroleum Industry*—University of Oklahoma Press, 1987.
5. James G. Speight, *Handbook of Petroleum Product Analysis*, John Wiley & Sons, Inc, 2015
6. Physical Chemistry by G.W. Castellan (Addison Wesley Publishing Company)

Reference Books

1. Sankara Papavinasam, Corrosion Control in the Oil and Gas Industry, Elsevier, 2013
2. Petroleum Engineering Handbook (Vol. 1 through VIII). Editor in Chief: Larry W. Lake, Society of Petroleum Engineers.
3. Srinivasan Chandrasekaran. Health, safety and Environmental Management for offshore and Petroleum Engineers, John Wiley and Sons, U.K., ISBN: 978-11-192-2184-5, 2016.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20CHE302 GREEN CHEMISTRY AND CATALYSIS FOR SUSTAINABLE ENVIRONMENT

L T P C
3 0 0 3

Pre-requisite: Basic Chemistry at Intermediate or equivalent level.

Course Description:

This course aims to introduce the interdisciplinary concept for engineering's to enhance their knowledge that they need to contribute with relevance and confidence in developing green technologies. This course covers feedstocks, green metrics and the design of safer, more efficient processes, as well as the role catalysts and solvents and green processes for Nanoscience.

Course Objectives:

Students will

1. Learn an interdisciplinary approach to the scientific and societal issues arising from industrial chemical production, including the facets of chemistry and environmental health sciences that can be integrated to promote green chemistry
2. Sensitize the students in redesigning of chemicals, industrial processes and products by means of catalysis.
3. Understand the use of alternatives assessments in using environmentally benign solvents.
4. Emphasize current emerging greener technologies and the need of alternative energies.
5. Learn to adopt green chemistry principles in practicing Nanoscience.

UNIT I PRINCIPLES AND CONCEPTS OF GREEN CHEMISTRY 9 hours

Introduction, Green chemistry Principles, sustainable development and green chemistry, atom economy, atom economic: Rearrangement and addition reactions and un-economic reactions: Substitution, elimination and Wittig reactions, Reducing Toxicity. Waste - problems and Prevention: Design for degradation.

UNIT II CATALYSIS AND GREEN CHEMISTRY 9 hours

Introduction to catalysis, Heterogeneous catalysts: Basics of Heterogeneous Catalysis, Zeolites: Catalytic cracking, ZSM-5 catalyst and high silica zeolites, TS1 Oxidation catalyst, Catalytic Converters, Homogeneous catalysis: Hydrogenation of alkenes using wilkinson's catalyst, Phase transfer catalysis: Hazard Reduction, C-C Bond Formation, Oxidation Using Hydrogen Peroxide.

UNIT III ORGANIC SOLVENTS: ENVIRONMENTALLY BENIGN SOLUTIONS 9 hours

Organic solvents and volatile organic compounds, solvent free systems, supercritical fluids: Super critical carbondioxide, super critical water and water as a reaction solvent: water based coatings, Ionic liquids as catalyst and solvent.

UNIT IV EMERGING GREENER TECHNOLOGIES AND ALTERNATIVE ENERGY SOURCES 9 hours

Biomass as renewable resource, Energy: Fossil Fuels, Energy from Biomass, Solar Power, Fuel Cells(Hydrogen—oxygen fuel cell), Photochemical Reactions: Advantages of and Challenges Faced by Photochemical Processes, Examples of Photochemical Reactions(caprolactum), Chemistry Using Microwaves: Microwave Heating, Microwave-assisted Reactions, Sonochemistry.

UNIT V GREEN PROCESSES FOR GREEN NANOSCIENCE 9 hours

Introduction and traditional methods in the nanomaterials synthesis, Translating green chemistry principles for practicing Green Nanoscience. Green Synthesis of Nanophase Inorganic Materials and Metal Oxide Nanoparticles: Hydrothermal Synthesis, Reflux Synthesis, Microwave-Assisted Synthesis, Other methods for Green synthesis of metal and metal oxide nanoparticles, Green chemistry applications of Inorganic nanomaterials

Course Outcomes:

Upon completion of this course the students should:

1. Recognize green chemistry concepts and apply these ideas to develop respect for the interconnectedness of our world and an ethic of environmental care and sustainability.
2. Understand and apply catalysis for developing eco-friendly processes.
3. Be in a position to use environmental benign solvents where ever possible.
4. Have knowledge of current trends in alternative energy sources.
5. Apply green chemistry principles in practicing green Nanoscience.

Text Books:

1. M. Lancaster, Green Chemistry an introductory text, Royal Society of Chemistry, 2002.
2. Paul T. Anastas and John C. Warner, Green Chemistry Theory and Practice, 4th Edition, Oxford University Press, USA

Reference Books

1. Edited by Alvis Perosa and Maurizio Selva , Hand Book of Green chemistry Volume 8: Green Nanoscience, wiley-VCH

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20CE301 GROUND IMPROVEMENT TECHNIQUES

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

Identification of problematic soils; ground improvement techniques; densification in granular soils; densification in cohesive soils; soil stabilization; confinement; reinforced earth; geo-synthetics; improvement of expansive soils.

Course Objectives:

Students will

1. To introduce engineering properties of soft, weak and compressible deposits, principles of treatment for granular and cohesive soils and various stabilization techniques.
2. To bring out concepts of reinforced earth.
3. Applications of geotextiles in various civil engineering projects.

UNIT I DEWATERING & GROUTING

9 hours

Introduction- Need for engineered ground improvement, classification of ground modification techniques; suitability, feasibility and desirability of ground improvement technique. Methods of de-watering- sumps and interceptor ditches- wells- drains- Electro- osmosis. Objectives of grouting- grouts and their properties-grouting methods.

UNIT II DENSIFICATION

9 hours

In - situ densification methods in cohesionless Soils: - Vibration at the ground surface, Impact at the Ground Surface, Vibration at depth, Impact at depth. In - situ densification methods in cohesive soils: - preloading or dewatering, Vertical drains - Sand Drains- Sand wick geo-drains - Stone and lime columns - thermal methods.

UNIT III STABILIZATION

9 hours

Methods of stabilization-mechanical-cement- lime-bituminous-chemical stabilization with calcium chloride- sodium silicate and gypsum.

UNIT IV REINFORCED EARTH & GEOSYNTHETICS

9 hours

Principles - Components of reinforced earth - factors governing design of reinforced earth walls design principles of reinforced earth walls. Geotextiles- Types, Functions and applications - geo- grids and geo-membranes - functions and applications.

UNIT V EXPANSIVE SOILS

9 hours

Problems of expansive soils - tests for identification - methods of determination of swell pressure. Improvement of expansive soils - Foundation techniques in expansive soils - under reamed piles.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After successful completion of the course, student will be able to

1. Evaluate basic deficiencies of various soil deposits and able to decide various dewatering methods to improve the soil.
2. Implement different techniques of soil densification.
3. Choose the best method for stabilizing the soil for a given soil condition.
4. Choose-the best geosynthetic materials in different engineering applications.
5. Assessing various types of foundation techniques and methods to control swelling of soil

Text Books:

1. Dr. Purushotham Raj, P., Ground Improvement Techniques, Laxmi Publications, New Delhi.
2. Dr. Sivakumar Babu, GL, An Introduction to Soil Reinforcement & Geosynthetics, Universities Press

Reference Books

1. Hausmann M.R., Engineering Principles of Ground Modification, McGraw-Hill International Edition, 1990.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20CE302 ENVIRONMENTAL IMPACT ASSESSMENT

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

The course will focus on Basic concept of Environmental Impact Assessment (EIA), EIA Methodologies, Impact of Developmental Activities and Land use in soil, water, and vegetation, Environmental Audit, Post Audit activities, The Environmental pollution Acts.

Course Objectives:

Students will

1. To impart knowledge on Environmental management and Environmental Impact Assessment.
2. To give the student the brief knowledge about various legislations and audit protocols.
3. To give student knowledge about the framing of environmental audit through case studies.

UNIT I CONCEPTS AND METHODOLOGIES IN EIA

9 hours

Introduction - Elements of EIA - Factor affecting EIA -Impact evaluation and analysis - Preparation of Environmental Base map - Classification of environmental parameters. Criteria for the selection of EIA Methodology - EIA methods: Ad-hoc methods - matrix methods - Network method - Environmental Media Quality Index Method -overlay methods - cost/benefit Analysis.

UNIT II IMPACT OF DEVELOPMENTAL ACTIVITIES

9 hours

Introduction and Methodology for the assessment of soil and ground water - Delineation of study area - Identification of actives. Procurement of relevant soil quality - Impact prediction - Assessment of Impact significance -Identification and Incorporation of mitigation measures. EIA in surface water - Air and Biological environment.

UNIT III IMPACT ON VEGETATION AND WILD LIFE

9 hours

Assessment of Impact of development Activities on Vegetation and wildlife - environmental Impact of Deforestation - Causes and effects of deforestation.

UNIT IV ENVIRONMENTAL AUDIT

9 hours

Environmental Audit & Environmental legislation objectives of Environmental Audit - Types of environmental Audit - Audit protocol - stages of Environmental Audit - onsite activities - evaluation of audit data and preparation of audit report - Post Audit activities.

UNIT V ENVIRONMENTAL POLLUTION ACTS

9 hours

The water Act-1974 - The Air Act-1981 (Prevention & Control of pollution Act.) - Wild life Act- 1972 - Indian Forest Conservation Act-1980 -National Green Tribunal Act –2010 - Biological Diversity Act-2002.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

The students after completing the course will be able to:

1. Apply the various methods used in predicting environmental impacts.
2. Apply site information to interpret impacts on land and groundwater.
3. Evaluate environmental impacts of various development activities on existing ecosystem.
4. Apply the procedures and various protocols involved in preparation of environmental audit report.
5. Apply the implications of environmental prevention and protection acts in relation to environmental impact assessment.

Text Books:

1. Anjaneyulu, Y., Environmental Impact Assessment Methodologies, B.S. Publication, Sultan Bazar, Kakinada.

Reference Books

1. Glynn, J. and Gary W. Hein Ke., Environmental Science and Engineering, Prentice Hall Publishers
2. Suresh K. Dhaneja Environmental Science and Engineering, S.K., Katania& Sons Publication, NewDelhi.
3. Dr. Bhatia, H.S., Environmental Pollution and Control, Galgotia Publication (P) Ltd, Delhi.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20CE303 WATERSHED MANAGEMENT

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

Topic covers basic concepts of watershed, sustainable watershed management approached and practices, integrated watershed management and modelling, social aspect in watershed management, quantification of water quality and quantity at the catchment outlet using modern techniques, drought, flood and storm management at catchment scale.

Course Objectives:

1. To discuss various aspects of water resources development and management on watershed basis.
2. To proliferate the sustainable use and development of natural resources.
3. To enrich the students for change in the hydrological fluxes due altered physiographic condition (land use or elevation) on a watershed scale.
4. To improve the quantitative problem solving skills of the students for natural resources management.

UNIT I CONCEPT OF WATERSHED

9 hours

Concept of watershed - classification of watershed - introduction to watershed management - objective of watershed development - Hydrological cycle - water balance equation - different stakeholders and their relative importance - watershed management policies and decision making. Factor Affecting Watershed Development: Morphological characteristics: linear - Arial and Relief aspect - land use - vegetation - soil and geological characteristics - Hydrology and geology and socio-economic characteristics.

UNIT II WATERSHED MODELING

9 hours

Watershed delineation - modelling of rainfall - runoff process - Concept of integrated watershed management conjunctive use of water resources - Integrated water resources management. PRA - Private sector participation - Institutional issues - Socio- economy issues - Integrated development - Water legislation and implementations - Tools and emerging technologies for watershed management and planning.

UNIT III EROSION AND SEDIMENTATION

9 hours

Types of erosion - factor affecting erosion - effect of erosion on land fertility and capacity - estimation of soil loss due to erosion: universal soil loss equation - Prevention And Control To Erosion: contour techniques - ploughing - furrowing- trenching - bunding - terracing - gully control - rockfill dams - check dams - brushwood dam - Gabion structure.

UNIT IV WATER HARVESTING

9 hours

Rain water harvesting - catchment harvesting - harvesting structures - soil moisture conservation - check dams - artificial recharge from pond - percolation tanks - Flood And Drought Management: Definition of flood - Flood frequency analysis: Weibul - Gumbel - and log Pearson methods - Definition and

Dept. of Computer Science & Engineering (IoT)

classification of drought - drought analysis techniques - drought mitigation planning - Management Of Water Quality: Water quality and pollution - types and Sources of pollution - water quality modelling- environmental guidelines for water quality.

UNIT V COVER MANAGEMENT

9 hours

Land use land cover change estimation through satellite imageries - land capability classification - management of forest - agricultural - grassland and wild land - Reclamation of saline and alkaline soil. Classification of columns based on slenderness ratio - reinforcement & loading - Design of rectangular and circular columns subjected to axial load - (axial load + uni-axial bending) and (axial load + bi-axial bending). Different Types of Footings - Design of isolated - square - rectangular and circular footings. Integrated Cropping System For Watersheds: Intercropping - mix cropping strip and terrace cropping - sustainable agriculture - cover cropping (biomass conservation) - horticulture - dryland agriculture and afforestation.

Course Outcomes:

The students after completing the course will be able to:

1. Classify watershed and Identify factors to consider for watershed Development.
2. Apply the concepts of watershed development and planning
3. Evaluate the erosion rate and total amount of soil loss from a watershed
4. Select the flood and drought mitigation measures
5. Quantify the change in land use land/cover and its impact on hydrological processes.

Text Books:

1. Kenneth N. Brooks Peter F. Ffolliott Joseph A. Magner. Hydrology and the Management of Watersheds. A John Wiley & Sons, Inc., Publication (4th Edition)
2. VVN, Murthy. Land and Water Management- Kalyani Pblcation

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20ME301 MATERIAL SCIENCE FOR ENGINEERS

L T P C
3 0 0 3

Pre-requisite: None

Course Objectives:

1. To understand the relation between structure and properties of metallic materials.
2. To understand the strengthening mechanism of metals
3. To comprehend the various electrical and electronic properties of materials.
4. To understand origins and various types of magnetism and its applications.
5. To comprehend the transmission of light in various solids and study of photonic behavior.

UNIT I STRUCTURE OF MATERIALS 9 hours

Introduction: Historical prospective - importance of materials - Classification of Materials and its Properties. Bonding in solids: bonding forces and energies - primary and secondary bonding. Crystallography and Metallic structures: Unit cell - Crystallographic directions and planes, FCC, BCC, HCP, SC and other structure – miller indices, Linear and planar densities - close- packed crystal structures. Packing of atoms in solids. Packing factor

UNIT II CRYSTAL IMPERFECTIONS AND DIFFUSION 9 hours

Crystal Imperfections: Types, Vacancies and interstitials, Dislocations, and grain boundaries. Diffusion: Fick's Law of diffusion – Diffusion mechanism – Steady state and non-steady state, factors affecting diffusion.

UNIT III ELECTRICAL PROPERTIES OF MATERIALS 9 hours

Introduction and Electrical Conduction: Ohm's Law, Electrical Conductivity, Electronic and Ionic Conduction - Energy Band Structures in Solids, Electron Mobility - Electrical Resistivity of Metals Semi conductivity: Intrinsic and Extrinsic Semiconduction - Temperature Dependence of Carrier Concentration, Factors that Affect Carrier Mobility, The Hall Effect, Semiconductor Devices. Conduction in Ionic Materials, Electrical Properties of Polymers. Dielectric Materials: Capacitance, Ferroelectric Materials, Piezoelectric Materials.

UNIT IV MAGNETIC PROPERTIES OF MATERIALS 9 hours

Introduction and Basic Concepts, Diamagnetism, Paramagnetism, Ferromagnetism, Anti ferromagnetism, Ferrimagnetism, Influence of Temperature on Magnetic Behavior, Domains and Hysteresis, Magnetic Anisotropy, Soft and Hard Magnetic Materials, Magnetic Storage, Superconductivity.

UNIT V PHOTONIC MATERIALS 9 hours

Introduction, Electronic Radiation in Vacuum; Reflection, Refraction, and absorption in materials; Absorption and Chemical Bonding: Color, X-Ray absorption, Photon absorption Devices - Photon Emission: X-Ray Emission, Emission of electromagnetic radiation and devices: LED's, OLEDs and LASERs. Optical Fibers in communication

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course students will be able:

1. To develop deep knowledge of crystal structure and effect of structure on the properties of the materials
2. To demonstrate knowledge of various imperfections in crystal, and diffusion mechanism in materials
3. To explain the origins of various electronic and electrical properties in the materials
4. To understand the concept of magnetism, its origin and types, while choosing the right material for the given application
5. To summarize various optical properties of the material and light's transmission behavior

Text Books:

1. W. Callister, "Materials Science and Engineering", Wiley, 7th Edition, 2007.
2. Charles M. Gilmore, "Materials Science and Engineering Properties", Cengage Learning, SI Edition, 2016

Reference Books

1. Donald R. Askeland, Pradeep P. Phule, "The Science and Engineering of Materials", Cengage Learning, 5th Edition, 2006.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20ME302 ELEMENTS OF MECHANICAL ENGINEERING

L T P C
3 0 0 3

Pre-requisite: None

Course Objectives:

Students belonging to all branches of Engineering are made to learn following fundamental topics related to mechanical engineering:

1. To teach students the basic concepts of Thermodynamics.
2. To teach students the basic Classification and working principles of boilers and turbines.
3. To teach students about IC engines, Refrigeration, and Air-Conditioning systems.
4. To teach students about engineering materials and casting manufacturing processes.
5. To teach students and machines tools and manufacturing systems.

UNIT I THERMODYNAMICS

9 hours

Basic concepts of Thermodynamics: Introduction, Important terminologies used in thermodynamics, Specific heat capacity, First law of thermodynamics, Second law of thermodynamics, Reversible and irreversible processes, the Carnot cycle and the Clausius inequality.

UNIT II BOILERS, TURBINES AND PUMPS

9 hours

Boilers: Introduction to boilers, Classification of boilers, requirements of a good boiler, Cochran, Babcock, Locomotive, and Lancashire boilers.

Turbines: Hydraulic Turbines-Classification and specification, Principles, and operation of Pelton wheel turbine, Francis turbine, and Kaplan turbine (elementary treatment only).

Hydraulic Pumps: Introduction, Classification, and specification of pumps, reciprocating pump, and centrifugal pump.

UNIT III IC ENGINES AND REFRIGERATION SYSTEMS

9 hours

Internal Combustion Engines: Classification, I.C. Engines parts, 2 and 4 stroke petrol and 4-stroke diesel engines, Working principle of IC engines, Valve timing diagrams, Otto cycle, Diesel cycle, and Dual cycle. Refrigeration and Air conditioning Refrigeration – Introduction, Refrigerator, and Heat pump, Components of refrigeration system, Types of refrigeration system, and Type of refrigerants.

UNIT IV MATERIALS, CASTING AND TRANSMISSION

9 hours

Engineering Materials: Introduction, mechanical properties of engineering materials, mechanical testing of engineering materials, Impact test, and Classification of engineering materials.

Casting: Introduction to casting processes, Classification of casting processes, Sand casting, and special casting methods.

Power Transmission Devices: Introduction, belt drive, rope drive, Chain drive, Gear drive, Classification of gears.

Dept. of Computer Science & Engineering (IoT)

UNIT V TOOLS AND MANUFACTURING SYSTEMS

9 hours

Machine Tools: Introduction, Mechanism of metal cutting, Geometry of single point cutting tool, Orthogonal and oblique metal cutting, Lathe, and Milling machines.

Manufacturing Systems Introduction, Computer Integrated Manufacturing, CAD/CAM, Numerical Control (NC), Computer Numerical Control, and Dynamics Numerical Control.

Course Outcomes:

On successful completion of the course, the student will be able to:

1. State first, second and third law of thermodynamics.
2. Sketch components of boilers and turbines.
3. State working principle of IC engines and R& AC systems.
4. Fair understanding of application and usage of various engineering materials, Casting process, and different types of drives with applications.
5. Explain the role of Computers in manufacturing systems.

Text Books:

1. “Basic Mechanical Engineering” by Pravin Kumar, Pearson Edition ISBN: 9789332505759, 9789332505759.

Reference Books

1. George E Dieter, “Mechanical Metallurgy”, 3rd Edition, McGraw Hill, 2017
2. S. Kalpakjian and S. R. Schmid, “Manufacturing Engg, and Technology”, 7th Edition, Pearson, 2018
3. P K Nag, “Engineering Thermodynamics”, 6th Edition, McGraw Hill, 2017

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

220EEE301 INDUSTRIAL ELECTRICAL SYSTEMS

L T P C
3 0 0 3

Pre-requisite: 20EEE101

Course Description:

This course deals with basics of electrical wiring systems for residential, commercial and industrial consumers, and its representation with standard symbols and drawings, various components of industrial electrical systems and its sizing and control aspects of industrial electrical system using PLC and SCADA.

Course Objectives:

1. To understand the electrical wiring systems for residential, commercial and industrial consumers.
2. To learn the representation of systems with standard symbols and drawings.
3. To understand the various components of industrial electrical systems.
4. To analyze and select the proper size of several electrical system components.
5. To study the control aspects of industrial electrical system using PLC and SCADA

UNIT I ELECTRICAL SYSTEM COMPONENTS

9 hours

LT system wiring components, selection of cables, wires, switches, distribution box, metering system, Tariff structure, protection components- Fuse, MCB, MCCB, ELCB, inverse current characteristics, symbols, single line diagram (SLD) of a wiring system, Contactor, Isolator, Relays, MPCB, Electric shock and Electrical safety practices.

UNIT II RESIDENTIAL AND COMMERCIAL ELECTRICAL SYSTEMS

9 hours

Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

UNIT III ILLUMINATION SYSTEMS

9 hours

Understanding various terms regarding light, lumen, intensity, candle power, lamp efficiency, specific consumption, glare, space to height ratio, waste light factor, depreciation factor, various illumination schemes, Incandescent lamps and modern luminaries like CFL, LED and their operation, energy saving in illumination systems, design of a lighting scheme for a residential and commercial premises, flood lighting.

UNIT IV INDUSTRIAL SUBSTATION SYSTEMS

9 hours

HT connection, industrial substation, Transformer selection, Industrial loads, motors, starting of motors, SLD, Cable and Switchgear selection, Lightning Protection, Earthing design, Power factor correction – kVAR calculations, type of compensation, Introduction to PCC, MCC panels. Specifications of LT Breakers, MCB and other LT panel components.

UNIT V INDUSTRIAL SYSTEM AUTOMATION

9 hours

DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks.

Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Discuss the various component representation involved in the design of electrical wiring for Low Tension.
2. Understand the guidelines for wiring of household and commercial buildings.
3. Understand the various components of illumination in industrial electrical systems.
4. Select the proper size of various electrical system components required for designing different electrical wiring systems.
5. Understand the control aspects of industrial electrical system using PLC and SCADA.

Text Books:

1. S. L. Uppal and G. C. Garg, "Electrical Wiring, Estimating & Costing", Khanna publishers, 2008
2. K. B. Raina, "Electrical Design, Estimating & Costing", New age International, 2007.

Reference Books

1. S. Singh and R. D. Singh, "Electrical estimating and costing", Dhanpat Rai and Co., 1997.
2. H. Joshi, "Residential Commercial and Industrial Systems", McGraw Hill Education, 2008.
3. <https://www.bis.gov.in/>

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20EEE302 INTRODUCTION TO MEMS

L T P C
3 0 0 3

Pre-requisite: 20EEE101

Course Description:

This course describes about manufacturing, modeling and applications of MEMS.

Course Objectives:

1. To know the fundamentals of MEMS materials, their physical properties and Principles of operation of MEMS devices.
2. To know various MEMS microfabrication technologies.
3. To provide various MEMS technology for mechanical, optical, and chemical sensors and actuator

UNIT I INTRODUCTION

9 hours

Overview – History and industry perspectives – Working principles – Mechanics and dynamics — Scaling law

UNIT II MICRO SENSORS & ACTUATORS

9 hours

Micro sensors: Pressure sensors, accelerometers, gyroscopes-Micro actuators: comb drive actuators – Micro-electromechanical systems.

UNIT III MICRO MANUFACTURING

9 hours

Materials for MEMS and Microsystems- Micro fabrication processes: Photolithography, Ion Implantation, Diffusion, Oxidation, Chemical Vapour Deposition- Physical Vapour Deposition, Micro manufacturing: Bulk micromachining, surface micromachining, LIGA Process- Packaging.

UNIT IV MODELING IN MEMS

9 hours

Micro system design: Finite Element Methods— Modeling of simulation – piezoelectric, Gyroscope

UNIT V MEMS APPLICATIONS

9 hours

Micro fluids-sensors for turbulence measurement and control, micro-actuators for flow control, RFMEMS- filters, Oscillators and phase shifters, Optical MEMS, micro robotics – Case studies

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Explain the fundamentals of MEMS materials, their physical properties and Principles of operation of MEMS devices.
2. Analyze the Micro sensors and actuators and its fabrication.
3. Explain the materials for MEMS and Microsystems.
4. Design MEMS using microfabrication techniques.
5. Explain the advantages of MEMS technology for mechanical, optical, and chemical sensors and actuator

Dept. of Computer Science & Engineering (IoT)

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20ECE301 BIO-MEDICAL ELECTRONICS

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course provides the fundamental knowledge on applications of electronics in bio-medical signal measurements and processing, bio-medical instrumentation and imaging techniques.

Course Objectives:

This course enables students to

1. Acquire the basic knowledge on human physiology and biological transducers.
2. Learn about bio-electrodes and bio-amplifiers used in bio-signal acquisition.
3. Understand the working principle of bio-medical measuring instruments.
4. Study various types of imaging techniques used in medicine.
5. Learn the applications of medical instrumentation in designing artificial medical aids

UNIT I HUMAN PHYSIOLOGY AND BIOMEDICAL TRANSDUCERS 9 hours

Introduction to human physiology - Biomedical transducers for measuring displacement, velocity, force, acceleration, potential, dissolved ions and gases.

UNIT II BIO-ELECTRODES AND AMPLIFIERS 9 hours

Introduction to bio-potential, Bio-electrodes, Typical waveforms and characteristics of ECG, EMG and EEG, Bio-potential amplifiers for ECG, EMG and EEG – Lead systems and recording methods.

UNIT III BIOMEDICAL MEASURING INSTRUMENTS 9 hours

Measurement of blood pressure and temperature, Blood flow meter, Cardiac output measurement, Respiratory measurement, Blood cell counter, Impedance plethysmography.

UNIT IV MEDICAL IMAGING 9 hours

X-ray, Computed Tomography (CT), Magnetic Resonance Imaging (MRI), Nuclear imaging, Ultrasonic Imaging.

UNIT V PROSTHESES AND AIDS 9 hours

Pacemakers, Defibrillators, Heart-lung machine, Artificial kidney, Aids for the handicapped, Safety aspects

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand the applications of biological transducers in medical field.
2. Analyze the design of bio-electrodes and bio-amplifiers.
3. Apply suitable measuring instruments to measure various medical parameters.
4. Understand and test various imaging techniques used in bio-medical diagnosis.
5. Analyze the applications of artificial medical aids.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20ECE302 VLSI DESIGN

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course describes about various VLSI design methodologies, fundamentals of CMOS technology. It incorporates basics of MOSFET models, CMOS design rules, Design of VLSI Systems, combinational logic design, sequential logic design, logic families and VLSI Design flow.

Course Objectives:

This course enables students to

1. Study the fundamentals of CMOS circuits and its characteristics
2. Learn the design and realization of combinational digital circuits.
3. Learn the design and realization of sequential digital circuits.
4. Architectural choices and performance tradeoffs involved in designing and realizing the circuits in CMOS technology are discussed
5. Learn the different FPGA architectures and testability of VLSI circuits.

UNIT I INTRODUCTION TO MOS TRANSISTOR

9 hours

MOS Transistor, CMOS logic, Inverter, Pass Transistor, Transmission gate, Layout Design Rules, Gate Layouts, Stick Diagrams, Long-Channel I-V Characteristics, C-V Characteristics, Non ideal I-V Effects, DC Transfer characteristics, RC Delay Model, Elmore Delay, Linear Delay Model, Logical effort, Parasitic Delay, Delay in Logic Gate, Scaling.

UNIT II COMBINATIONAL MOS LOGIC CIRCUITS

9 hours

Circuit Families: Static CMOS, Ratioed Circuits, Cascode Voltage Switch Logic, Dynamic Circuits, Pass Transistor Logic, Transmission Gates, Domino, Dual Rail Domino, CPL, DCVSPG, DPL, Circuit Pitfalls.

Power: Dynamic Power, Static Power, Low Power Architecture.

UNIT III SEQUENTIAL CIRCUIT DESIGN

9 hours

Static latches and Registers, Dynamic latches and Registers, Pulse Registers, Sense Amplifier Based Register, Pipelining, Schmitt Trigger, Monostable Sequential Circuits, Astable Sequential Circuits.

Timing Issues: Timing Classification Of Digital System, Synchronous Design.

UNIT IV DESIGN OF ARITHMETIC BUILDING BLOCKS AND SUBSYSTEM

9 hours

Arithmetic Building Blocks: Data Paths, Adders, Multipliers, Shifters, ALUs, power and speed tradeoffs, Case Study: Design as a tradeoff.

Designing Memory and Array structures: Memory Architectures and Building Blocks, Memory Core, Memory Peripheral Circuitry.

UNIT V IMPLEMENTATION STRATEGIES AND TESTING

9 hours

FPGA Building Block Architectures, FPGA Interconnect Routing Procedures. Design for Testability: Ad Hoc Testing, Scan Design, BIST, IDDQ Testing, Design for Manufacturability, Boundary Scan

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Realize the concepts of digital building blocks using MOS transistor.
2. Design combinational MOS circuits and power strategies
3. Design and construct Sequential Circuits and Timing systems.
4. Design arithmetic building blocks and memory subsystems.
5. Apply and implement FPGA design flow and testing.

2. William Stallings, “Operating Systems – Internals and Design Principles”, 7th Edition, Prentice Hall, 2011.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – IV

Open Elective - IV

20PHY303 THIN FILM TECHNOLOGY AND ITS APPLICATIONS

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

Nucleation, crystallization, surface energy, various thin film coating processes including both physical vapour deposition such as evaporation, sputtering, pulsed laser deposition and chemical vapour deposition, spray coating, and other methods such as spin-coating, plasma polymerization, Langmuir Blodgett, transport phenomena in thin films, various properties of thin films, techniques and method to characterize thin films, current application of thin film, introduction to fabrication of thin film devices

Course Objectives:

1. To provide students with a comprehensive overview on the fundamentals of thin film preparation and characterization.
2. To enable the students to develop a thorough understanding of how core physics can be used to understand thin film deposition processes.
3. To establish the correlation between processing variables and materials characteristics and performance within the framework of key modern technologies.
4. To realize thin film applications to science and technology

UNIT I PHYSICS OF THIN FILMS

8 hours

Introduction - Role of thin films in devices - Thin film definition - Crystalline and amorphous films - Crystal defects - Nucleation and growth - film formation.

UNIT II THIN FILM DEPOSITION TECHNIQUES

10 hours

Physical methods of films deposition-evaporation, e-beam, sputter deposition, pulsed laser, molecular beam epitaxy. Chemical methods of film deposition -Deposition of Inorganic films from Solutions-Chemical vapour deposition - Electrolysis, Anodization, Spray pyrolysis, Other techniques: Langmuir Blodgett and Spin Coating.

UNIT III PROPERTIES OF THIN FILMS

8 hours

Structural-Optical-Electrical-Magnetic-Mechanical and Thermal properties of thin films.

UNIT IV CHARACTERIZATION OF THIN FILMS

10 hours

Imaging Techniques (SEM, AFM, TEM) - Structural Techniques (XRD, Raman)-Optical Techniques (UV-Vis-NIR, PL)-Electrical Techniques (Hall Effect, IV, CV)-Magnetic Techniques (EPR, H-V curve)-Mechanical Techniques (Hardness testing)-Thickness measurement (profilometer, ellipsometry).

UNIT V APPLICATIONS OF THIN FILMS

9 hours

Transparent conducting coating - Optical coating – Solar cells – Photocatalytic – Sensors - Superconductivity- Superhard coatings – Thin film transistors.

Course Outcomes:

At the end of the course, students will be able to:

1. Discuss the differences and similarities between different vacuum based deposition techniques, evaluate and use models for nucleating and growth of thin films.
2. Asses the relation between deposition technique, film structure, and film properties.
3. Know the typical thin film applications.
4. Motivate selection of deposition techniques for various applications.

Text Books:

1. Thin Film Deposition: Principles and Practice, Donald L. Smith, McGraw Hill, Singapore, 2001.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

20CHE303 INTRODUCTION TO NANO SCIENCE AND TECHNOLOGY

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This is primarily a lecture course which brings together relevant knowledge from the disciplines of physics and chemistry to give students a fundamental understanding of the integrated multidisciplinary nature of Nanotechnology.

Course Objectives:

1. To understand the emergence of nanoscience and technology through history.
2. The various process techniques available for nanostructured materials.
3. The role of nanotechnology in electronics how basic nano-systems work
4. To use physical reasoning to develop simple nanoscale models to interpret the behaviour of such physical systems

UNIT I MOLECULE TO MATERIALS: BASICS OF NANOTECHNOLOGY 8 hours

History & emergence (Feynman to present) of Nanoscience and Nanotechnology, Challenges in Nanotechnology. Atomic Structures: Rutherford and Bohr's model of atom. Bohr's model to Quantum: Wave function, Uncertainty principle, Orbital quantum numbers, Shape of the orbitals. Types of simple crystal structures, defects in crystals.

UNIT II TYPES AND SYNTHESIS OF NANOSTRUCTURES 10 hours

Definition of a Nano system - Zero Dimensional (0D), One Dimensional (1D) - Two Dimensional (2D) - Three Dimensional (3D) nanostructured materials. Nanoscale building blocks, Top-down and Bottom-up approaches. Synthesis of Nanomaterials – Physical & Chemical methods: Chemical Vapour Deposition (CVD), Atomic Layer Deposition (ALD), Chemical Reduction, Co-precipitation, Emulsion Polymerization (Polymer and Organic NPs), Sol-Gel, Green synthesis of Nanoparticle (NP).

UNIT III PROPERTIES OF NANOMATERIAL 8 hours

Thermal, Mechanical, Optical, Electrical and Magnetic properties of nanomaterials (Metal oxides, Ceramics, Nanocomposites, Semiconductors). Carbon age materials: CNTs, and other Carbon-based materials). Effect of size and shape on the properties of nanomaterials.

UNIT IV CHARACTERIZATION OF NANOMATERIALS 10 hours

Structure: Powder XRD (SAXS); Composition: XPS; Thermal: TG-DTA; Optical & Electron microscopes: Atomic force microscopes (AFM), Scanning electron microscope (SEM), Transmission electron microscope (TEM); Magnetic characterization (SQUID).

UNIT V APPLICATIONS OF NANOMATERIALS 9 hours

Molecular electronics and nano-electronics – LED applications, Quantum electronic devices - CNT based transistor and Field Emission Display – Biological (anti-bacterial, anti-fungal, anti-microbial)

Dept. of Computer Science & Engineering (IoT)

applications - Biochemical sensor - Membrane based water purification, Target based drug delivery system.

Course Outcomes:

At the end of the course, students will be able to:

1. Understand the correlation between atomic, molecular structures and nanomaterials
2. Classify the types and synthesis the nanomaterials based on the needs of the society and environment.
3. Infer and interpret the properties of nanomaterials
4. Apply the knowledge of characterization tools towards making the sustainable engineering products.
5. Illustrate the application of various nanomaterials in daily life, industry towards the sustainable development.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Dept. of Computer Science & Engineering (IoT)

Open Elective - IV

20CHE304 COMPUTATIONAL METHODS IN MATERIALS SCIENCE AND ENGINEERING

L T P C
3 0 0 3

Pre-requisite: Exposure to Introductory engineering mathematics, introductory materials science and introductory programming courses is preferred.

Course Description:

This course deals with various computational approach and mathematical methods to understanding and apply different concepts in materials science and engineering.

Course Objectives:

1. To get exposed to the basic concepts in Materials Science and Engineering.
2. To understand the basic concepts of Programming and Graphical plotting.
3. To introduce the basic concepts of Data types and handling of various data.
4. To familiarize the basic concepts of modelling and simulation.
5. To acquire and apply the current knowledge and trends in the field of Computational Materials Science.

UNIT I INTRODUCTION TO COMPUTATIONAL MATERIALS SCIENCE AND ENGINEERING 9 hours

Concepts in materials science and engineering; use of computers and freely available open source software to: data handling; understand concepts and solve problems of engineering interest.

UNIT II PROGRAMMING AND PLOTTING 9 hours

Introductions to the advanced concept C programming language; open source software for numerical computations and visualization (gnuplot, GNU Octave, Scilab); introduction to the LaTeX software for report preparation along with other miscellaneous software and programs.

UNIT III DATA TYPES AND HANDLING TECHNIQUES 9 hours

Classification, and understanding of data properties, data handling - plotting, fitting, functional forms, interpolation, and integration.

UNIT IV COMPUTATIONAL MODELING AND SIMULATIONS 9 hours

Understanding the materials properties; atomistic and electronic modelling of materials; concepts in molecular dynamics and its application using Quantum ESPRESSO.

UNIT V CURRENT TRENDS IN COMPUTATIONAL MATERIALS SCIENCE 9 hours

Applied materials for various engineering field; research literature exploration; real-time application of computational methods in materials science and engineering, mini-project.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Understand the importance and applications of computational methods in Materials Science and Engineering.
2. Be familiarized with the tools of the trade, namely programming and graphical plotting.
3. Be able to understand and access the various types of data sets and appropriately handle it to productively work with it.
4. Get the knowledge about handling various open source computational tools and their effective usage to do computational modeling and simulations.
5. Be familiarized with up to date trends in computational materials science by taking up real time research problems and provide solutions.

Text Books:

1. Computational Materials Science: An Introduction, Second Edition 2nd Edition, by June Gunn Lee, 2014
2. Materials science and engineering: an introduction, William D Callister, Sixth edition, John Wiley & Sons, 2013.
3. The C programming language, Brian W Kernighan and Dennis M Ritchie, Second edition, PHI Learning Private Limited, 2010.
4. Materials science and engineering: a first course, V Raghavan, Fifth edition, PHI Private Limited, 2008.
5. Physical metallurgy principles, Robert E. Reed-Hill, Second edition, Affiliated East-West Press Pvt. Limited, 2008.
6. An introduction to materials science and engineering, Kenneth M Ralls, Thomas H Courtney, and John Wulff, Wiley India Pvt. Ltd., 2011.

Reference Books

1. Materials Science and Engineering, V Raghavan, Prentice-Hall India, 2004
2. Advanced Engineering Mathematics, E Krezig, Wiley-India, 1999.
3. A Review of Computational Methods in Materials Science, International Journal of Molecular Sciences 10(12):5135-216

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

20CE304 GREEN BUILDINGS AND ENERGY CONSERVATION

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

The course covers various aspects of bioclimatic architecture like climate sensitive design, passive solar architecture, Water management, green building materials and construction techniques.

Course Objectives:

1. The course introduces concepts of sustainability and bioclimatic design in planning, construction and life of buildings.
2. This course intends to equip students with technical knowledge of energy-efficient green buildings
3. This course guide students, through projects, to apply concepts and ideas for the design of a green building by introducing them to green initiatives and ratings.
4. This course also initiates students in basics of functional design and drawing of the various buildings using the above concepts.

UNIT I GREEN BUILDING CONCEPTS

9 hours

Introduction to bioclimatic architecture - Sustainability in building science and Functional planning - Orientation - Elements of building design and drawing - Building regulations and bylaws - Traditional and Vernacular Architecture - Climate zones - Design Charts - sun path diagram - Solar angles - Indices of thermal comfort - Vernacular buildings in different climate zones.

UNIT II CLIMATE RESPONSIVE SCIENTIFIC PROCESS OF DESIGN

9 hours

Introduction - various steps in Site planning - Plan form Building envelope Land form -Topography - vegetation - water bodies; Orientation - S/V ratio - P/A ratio - Walls, Fenestration - Roof and floors - Active and passive solar strategies - Passive solar architecture.

UNIT III THERMAL FLOW IN BUILDINGS

9 hours

Calculation of thermal conductance - Heat flow through different building elements - Ventilation and day lighting- Design and placement of openings- Water management in buildings- Techniques to recycle, reuse and harvest water.

UNIT IV GREEN BUILDING MATERIALS AND CONSTRUCTION

9 hours

Material properties - Energy efficiency using various materials - emerging new materials Construction techniques- Techniques for roof, wall and foundations.

UNIT V ECONOMY OF GREEN BUILDING

9 hours

Cost of building - operation and maintenance - Green building rating system - Evaluation criteria of LEED - TERI GRIHA case studies - Case studies in different climate zones.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students will be able to:

1. Use various regulations and by laws for green building construction.
2. Do site planning for Green Building.
3. Compute thermal flow through different building elements
4. Identify energy efficient building materials
5. Compute cost of building/operation and maintenance

Text Books:

1. Krishnan, A., Baker, N., Yannas, S., & Szokolay, S. (Eds.). (2001). Climate responsive architecture, a design handbook for energy efficient buildings. New Delhi: Tata McGraw- Hill Publishing Company.
2. TERI & ICAEN (InstitutCatalad'Energia). (2004). Sustainable building design manual (Vol. II). New Delhi: The Energy and Resources Institute(TERI) Press.

Reference Books

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

20CE305 ENVIRONMENTAL ENGINEERING

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

The course covers demand, quality and treatment of water along with characterization, water and wastewater treatment plant units and design, low cost treatment of wastewater and household drainage. Similarly, air pollution, noise pollution and solid waste management are also included. Further the course also covers basic laboratory

Course Objectives:

1. To explain different sources of water, water quality standards, water demands, distribution of water, population forecast, characteristics of water.
2. To analyze various water treatment plant units and their design considerations, advanced water treatment systems.
3. To explain the generation and collection of wastewater; wastewater treatment plant design, various wastewater treatment units and sludge treatment.
4. To explain various impacts of air and noise pollution and various methods to control them air and noise pollution
5. To describe about solid waste generation, characterization, impacts and various management techniques

UNIT I WATER SUPPLY ENGINEERING

9 hours

Water- Sources of Water, Water quality standards, Quantity of water: water demands, percapita demand, design period, population forecast, fluctuation in demand. General requirement for water supply: Sources, Types of intakes, Pumping and distribution of water; Quality of water: Physical, chemical, and biological characteristics of water and significance, necessity of treatment, water quality standards for various water uses.

UNIT II WATER TREATMENT

9 hours

Engineering system for water purification: Aeration, Screening, Coagulation and Flocculation, Sedimentation, Softening, Filtration, Disinfection; Methods of treatment: Removal of color, tastes and odor control, removal of iron and manganese, fluoridation and defluorination. Advanced water treatment: Ion exchange, electro-dialysis, RO (principles only).

UNIT III WASTEWATER TREATMENT

9 hours

Generation and collection of wastewaters- sanitary, storm and combined sewerage systems, quantities of sanitary wastes and storm water, design of sewerage system. Engineered system for wastewater treatment: Primary treatment, Screening, Grit removal, Sedimentation, Sedimentation aided with coagulation. Secondary treatment: Basis of microbiology, Growth and food utilization, Suspended growth systems, Attached growth systems, Secondary clarification, Disinfections of effluents; Sludge treatment and disposal: Sludge characteristics, thickening, disposal.

Dept. of Computer Science & Engineering (IoT)

UNIT IV AIR AND NOISE POLLUTION

9 hours

Air - Composition and properties of air, urban air pollution, Air quality standards, Measures and major equipment for air pollution control, Noise - Basic concept, measurement, and various noise control methods.

UNIT V SOLID WASTE MANAGEMENT

9 hours

Solid waste management-Municipal solid waste, Composition, and various chemical and physical parameters of MSW, MSW management: Collection, transport, treatment, and disposal of MSW. Effects of solid waste on environment: effects on air, soil, water surface and ground, health hazards. Disposal of solid waste-segregation, reduction at source, recovery and recycle, Disposal methods.

Course Outcomes:

At the end of the course, students will be able to:

1. Estimate water demand and population forecasting and characteristics of water
2. Estimate water generation and perform basic design of the unit operations that are used in water treatment plants.
3. Explain various wastewater generation sources and different units of wastewater treatment and sludge treatment techniques
4. Describe the impacts of air and noise pollution and review various air and noise pollution control methods
5. Discuss about the impacts of solid waste and various solid waste management techniques

Text Books:

1. Environmental Engineering (Volume I & II) by S. K. Garg-Khanna Publishers.
2. Rao M and Rao H. V. N. Air Pollution, McGraw Hill Education, 2017.
3. Jagbir Singh and Ramanathan A. L., Solid Waste Management: Present and Future Challenges, I K International Publishing House Pvt. Ltd., 2009
4. Environmental Engineering by H. S. Peavy, D.R. Rowe and G. Tchobanoglous, MGH.

Reference Books

1. Birdie, G.S, Birdie, J.S., Water supply and sanitary Engineering, Including Environmental Engineering, Water and Air Pollution Laws and Ecology, Dhanpat Rai Publications, 1996.
2. Punmia, B.C, Ashok Kr Jain, Arun Kr Jain., Waste Water Engineering, Laxmi Publications, 1998.
3. Integrated Solid Waste Management, Tchobanoglous, Theissen & Vigil. McGraw Hill Publication
4. Metcalf & Eddy, Wastewater Engineering Treatment and Dispose, McGraw Hill Publication

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective - IV

20ME303 TOTAL QUALITY MANAGEMENT

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

Total quality management (TQM) is a philosophy, methodology and system of tools aimed to create and maintain mechanism of organization's continuous improvement. It involves all departments and employees for the improvement of processes and products. TQM encompasses various principles, techniques, and tools for identifying and solving problems, fostering a culture of quality, promoting teamwork, and striving for excellence in all areas of the organization. The goal of TQM is to achieve sustainable and long-term success by consistently delivering high-quality products and services that meet or exceed customer expectations while improving overall organizational performance.

Course Objectives:

Students will

1. Study comprehensive knowledge about the principles, practices, tools and techniques of total quality management.
2. Gain knowledge on leadership, customer satisfaction, addressing customer complaints, team work, employee involvement, related to customer and supplier partnership.
3. Gather information on various tools and techniques, concept on Six Sigma, bench marking and Failure Mode Effective Analysis (FMEA).
4. Know the importance of Quality circle, Quality Function Deployment, Taguchi design and case studies related to TQM.
5. Facilitate the understanding of standards of quality.

UNIT I INTRODUCTION

9 hours

Introduction - Evolution of Quality - Historical Perspective, Basic Concepts of Quality – Quality control, Quality management and Quality Assurance - Definition of TQM – Basic concepts of TQM - TQM Framework - Contributions by Deming, Juran, Crosby and Feigenbaum – Dimensions of product and service quality

UNIT II TQM PRINCIPLES

9 hours

TQM principles - Strategic quality planning, Quality statements – Customer focus – Customer orientation, Customer satisfaction, Customer complaints, Customer retention – Role of Leadership and Commitment in Quality Deployment, Team Building, Motivation and Rewards, Total Employee Empowerment, Performance appraisal - Continuous process improvement – Supplier partnership – Partnering, Supplier selection,

UNIT III TOOLS OF TQM

9 hours

The seven traditional tools of quality – New management tools – Six-sigma: Concepts, methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – KAIZEN, 5S, JIT, Documentation – Failure mode and Effect Analysis (FMEA)

UNIT IV TQM TECHNIQUES

9 hours

Quality circles – Quality Function Deployment (QFD) – House of Quality – Design of Experiments – Taguchi quality engineering – Orthogonal Arrays – Signal to Noise Ratio – TPM – Concepts, improvement needs – Cost of Quality – Performance measures

UNIT V IMPLEMENTATION OF TQM

9 hours

Introduction – Benefits of ISO Registration – ISO 9000 Series of Standards –Implementation – Environmental Management System: Introduction – ISO 14000 Series Standards – Concepts of ISO 14001 – Requirements of ISO 14001, Case studies on TQM principles followed by Indian Industries.

Course Outcomes:

At the end of the course, students will be able to:

1. Understand the various principles and practices of TQM to achieve quality.
2. Identify the various statistical approaches for Total Quality Control.
3. Demonstrate the TQM tools for continuous process improvement.
4. Adopt the importance of ISO and Quality systems.
5. Make use of the concepts of TQM to solve case studies

Text Books:

1. Dale H. Besterfield, et al., Total Quality Management, Pearson Education Asia, Third Edition, Indian Reprint (2003).

Reference Books

1. James R. Evans and William M. Lindsay, The Management and Control of Quality, (6th Edition), South-Western (Thomson Learning), 2005.
2. Oakland, J.S. TQM – Text with Cases”, Butterworth – Heinemann Ltd., Oxford, Third Edition (2003).
3. Suganthi,L and Anand Samuel, Total Quality Management, Prentice Hall (India) Pvt. Ltd. (2006) Model.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Open Elective – II

20ME304 ENTREPRENEURSHIP

L T P C
3 0 0 3

Pre-requisite: None

Course Description:

This course is designed to ignite the entrepreneurship idea into the young minds of engineers. This course gives the complete details to setup an enterprise which includes the generating business ideas, writing business plan and executing the plan successfully.

Course Objectives:

1. Understand the requirements of entrepreneurship as a profession.
2. Understand and develop the business plan.
3. Identify the various financial terms and conditions of new business venture.
4. Selection of plant location and choosing layout.
5. Analyse the market research for new ventures and small businesses.

UNIT I INTRODUCTION

9 hours

Introduction to Entrepreneurship, history of entrepreneurship development, social Entrepreneurship, Intrapreneurship, Definition of Entrepreneur, Entrepreneurial Traits, Entrepreneur vs. Manager, Entrepreneur vs Intrapreneur. The Entrepreneurial decision processes. Role of Entrepreneurship in Economic Development, Ethics and Social responsibility of Entrepreneurs. Opportunities for Entrepreneurs in India and abroad. Woman as Entrepreneur. Realities & Case studies about successful Entrepreneur

UNIT II CREATING AND STARTING THE VENTURE

9 hours

Sources of new Ideas, Methods of generating ideas. The Business Plan Nature and scope of Business plan, Writing Business Plan, Evaluating Business plans, implementation of business plans. Case studies of successful business plan, Marketing plan, financial plan, and organizational plan, Launching formalities. Developing business plan and evaluation with team.

UNIT III FINANCING AND MANAGING THE NEW VENTURE

9 hours

Sources of capital, venture capital, angel investment, Record keeping, recruitment, motivating and leading teams, financial controls. Marketing and sales controls. Ecommerce and Entrepreneurship, Internet advertising. New venture Expansion Strategies and Issues, Features and evaluation of joint ventures, acquisitions, merges, franchising. Case studies about entrepreneur who success or failure in their business based on the financial control

UNIT IV PLANT LAYOUT

9 hours

Definition of plant layout and its types, Issues related to Selection of layout. Production and Marketing Management, Selection of production Techniques, plant utilization and maintenance. Case study about selection of site and plant layout for new business venture.

UNIT V MARKET ANALYSIS AND PROJECT MANAGEMENT 9 hours

Inventory control, material handling and quality control. Marketing functions, market segmentation, market research and channels of distribution, Sales promotion and product pricing. Case studies on market analysis on entrepreneur perspective. Project Organization- Project Planning, Monitoring, Control and Learning. Detailed life cycle and post-mortem analysis, Resource allocation, Risk and uncertainty, Budget constraints, Project feasibility.

Course Outcomes:

Upon completion of this course the students shall be able to:

1. Describe the sources of new business ideas, methods to develop new ideas and use the problem-solving techniques.
2. Write a business plan which includes financial plan, organizational plan and marketing plan.
3. Identify the financial sources for new business ventures.
4. Select a plant layout and draw a plant layout.
5. Design a workplace and analyse the market research for new business.

Text Books:

1. Entrepreneurship, Robert Hisrich, & Michael Peters, 5/e TMH.
2. Entrepreneurship, Dollinger, Pearson, 4/e, 2004.

Reference Books

1. Dynamics of Entrepreneurial Development and Management, Vasant Desai, Himalaya Publ. House, 2004.
2. Harvard Business Review on Entrepreneurship. HBR Paper Back, 1999.
3. Entrepreneurial Management, Robert J. Calvin, TMH, 2004.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Pre-requisite Nil 20EEE108

Course Description:

Robotics is an interdisciplinary area ranging from mechanical & electrical component design to advanced sensor technology, incorporating computer systems and Artificial Intelligence (AI). With advances in AI-techniques & computational power in recent years, it has become one of the most interesting areas for multidisciplinary research, with lots of commercial applications already in market.

Course Objectives:

This course enables students to

1. To know the fundamentals of Robotics & its applications.
2. To know about sensors and make them to handle the selection of sensors for robot design.
3. To know about kinetic and Jacobian modelling.
4. To know about robot programming and implementation.

UNIT I INTRODUCTION, TRANSFORMATION AND MAPPING 9 hours

Evolution of Robots and Robotics, Laws of Robotics, Advancement in Robots, Robot Anatomy, Human Arm Characteristics, Design and Control Issues, Manipulation and Control, Sensors and Vision, Robotic Programming and Future Prospects.

Coordinate Frames, Object Description in Space, Transformation of Vectors, Inverting a homogenous transform, Fundamental Rotation Matrices.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS 9 hours

Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers.

Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION 9 hours

Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors, binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.

UNIT IV ROBOT KINEMATICS

9 hours

Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems.

UNIT V ROBOT PROGRAMMING, IMPLEMENTATION AND ECONOMICS

9 hours

Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs. RGW, AGV; Implementation of Robots in Industries-Variou Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

Course Outcomes:

After completing this Unit, students will be able to

1. Understand the fundamentals of Robotics.
2. Analyze the robot drive system.
3. Understand the various sensors and actuators.
4. Analyze the mechanical structure and notations kinematic model.
5. Implement the basic commands for robots.

Text Book(s)

1. Mittal, R. K. and Nagrath, I.J., Robotic and Control, Tata McGraw Hill, New Delhi, 2003.
2. Arshdeep Bahga, Vijay Madisetti, Internet of Things: A Hands-On Approach, Universities Press, 2015. ISBN: 978-8173719547

4. Pugh, A., Robot Sensors, Vision Vol.-I. Springer Verlag, 1986.
5. Groover, M.P., Industrial Robotics Technology, programming & Application, McGraw Hill,

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

20EEE304 ELECTRICAL SAFETY

L T P C
3 0 0 3

Pre-requisite Nil 20EEE101

Course Description:

To provide a comprehensive exposure to electrical hazards, various grounding techniques, safety procedures and various electrical maintenance techniques.

Course Objectives:

This course enables students to

1. To impart knowledge on electrical hazards and safety equipment.
2. To analyze and apply various grounding and bonding techniques.
3. To select appropriate safety method for low, medium and high voltage equipment.
4. To understand how to participate in a safety team.
5. To carry out proper maintenance of electrical equipment by understanding various standards.

UNIT I ELECTRICAL HAZARDS 9 hours

Primary and secondary hazards- arc, blast, shocks-causes and effects-safety equipment- flash and thermal protection, head and eye protection-rubber insulating equipment, hot sticks, insulated tools, barriers and signs, safety tags, Classification of insulating materials, locking devices- voltage measuring instruments- proximity and contact testers-safety electrical one-line diagram- electrician's safety kit.

UNIT II GROUNDING AND BONDING 9 hours

General requirements for grounding and bonding- definitions- grounding of electrical equipment- bonding of electrically conducting materials and other equipment- connection of grounding and bonding equipment- system grounding- purpose of system grounding- grounding electrode system- grounding conductor connection to electrodes-use of grounded circuit conductor for grounding equipment- grounding of low voltage and high voltage systems Ground resistance measurement using megger.

UNIT III SAFETY METHODS 9 hours

The six step safety methods- pre job briefings- hot -work decision tree-safe switching of power system- lockout-tag out- flash hazard calculation and approach distances- calculating the required level of arc protection-safety equipment, procedure for low, medium and high voltage systems- the one minute safety audit.

UNIT IV SAFETY TEAM 9 hours

Electrical safety programme structure, development- company safety team- safety policy- programme implementation- employee electrical safety teams- safety meetings- safety audit- accident prevention-first aid- rescue techniques-accident investigation.

UNIT V MAINTENANCE OF ELECTRICAL EQUIPMENT 9 hours

Safety related case for electrical maintenance- reliability centred maintenance (RCM) - eight-step maintenance programme- frequency of maintenance- maintenance requirement for specific equipment and location- regulatory bodies- national electrical safety code- Indian standard for electrical safety in work place- occupational safety and health administration standards.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Understand various types of dielectric materials, their properties in various conditions.
2. Analyze and apply various grounding and bonding techniques.
3. Select appropriate safety method for low, medium and high voltage equipment.
4. Participate in a safety team.
5. Carry out proper maintenance of electrical equipment by understanding various standards.

Text Book(s)

1. Dennis Neitzel, Al Winfield, 'Electrical Safety Handbook', McGraw-Hill Education, 4th Edition, 2012.

Reference Books

1. John Cadick, 'Electrical Safety Handbook', McGraw-Hill School Education Group, 1994.
2. The Institution of Electric Engineers, 1994.
3. Ray A. Jones, Jane G. Jones, 'Electrical safety in the workplace', Jones & Bartlett Learning, 2000.
4. Tareev, 'Electrical Engineering Materials', Verlag Technik, Berlin

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Open Elective – IV

20ECE303 EMBEDDED SYSTEMS

L	T	P	C
3	0	0	3

Pre-requisite None

Course Description:

The course will provide strong foundation on embedded system design. The course covers theory and logic to develop programming expertise. Student will understand application of embedded microcontrollers ARM.

Course Objectives:

This course enables students to

1. To provide knowledge on the basics, building blocks of Embedded System.
2. To provide basic of operating system and Real time programming languages
3. To teach automation using scheduling algorithms and Real time operating system.
4. To understand firmware design and Architectural Support for Operating Systems for various applications
5. To discuss on different Phases & Modeling of a new embedded product.

UNIT I THE CONCEPT OF EMBEDDED SYSTEMS

9 hours

Embedded System Design, Introduction to Embedded Hardware Elements, Sensors and Actuators, Embedded Processors, Memory Architectures. Embedded System vs. General Purpose computing systems, Examples of embedded systems, Embedded memories, Embedded microcontroller cores

UNIT II SOFTWARE ASPECTS OF EMBEDDED SYSTEMS – I

9 hours

Operating System Basics, types of Operating Systems, Task and Task States, Semaphores and shared Data, RTOS services and design using RTOS, Tasks, Process and Threads, Multiprocessing and Multitasking, Real time programming languages.

UNIT III SOFTWARE ASPECTS OF EMBEDDED SYSTEMS- II

9 hours

Task Communication: Shared Memory, Message Passing, Remote Procedure Call and Sockets, Task Synchronization: Task Communication Synchronization Issues, Task Synchronization Techniques, Device Drivers, how to Choose an RTOS, Integrated Development Environment (IDE).

**UNIT IV FIRMWARE AND ARCHITECTURAL SUPPORT FOR
OPERATING SYSTEMS**

9 hours

Firmware and Bootloader, an introduction to operating systems, The ARM system control coprocessor Embedded ARM Applications, CP15 protection unit registers, CP15 MMU registers, ARM MMU architecture, Synchronization, Context switching, Input/Output, Example and exercises, The ARM7500 and ARM7500FE.

Open Elective – IV

20ECE304 DSP ARCHITECTURE

L T P C
3 0 0 3

Pre-requisite 20ECE110

Course Description:

The course will provide an insight into the architectures of DSP processors for handling the bottlenecks in executing DSP algorithms. On the application side the students can develop FPGA based DSP Systems and can understand the concept of multicore DSP as HPC infrastructure

Course Objectives:

This course enables students to

1. Understand the programmable digital signal processing hardware.
2. study the architecture of TMS320CX processor and block diagram
3. Know syntax and write the assembly language programming for digital signal processors.
4. Study the architecture of FPGA based DSP for various applications.
5. Study about High-Performance Computing using P-DSP.

UNIT I PROGRAMMABLE DSP HARDWARE

9 hours

Introduction: Digital signal-processing system, discrete Fourier Transform (DFT) and fast Fourier transform (FFT), differences between DSP and other microprocessor architectures. Processing Architectures (von Neumann, Harvard), DSP core algorithms (FIR, IIR, Convolution, Correlation, FFT), IEEE standard for Fixed and Floating-Point Computations, Special Architectures, Modules used in Digital Signal Processors (like MAC unit, Barrel shifters), On-Chip peripherals, DSP benchmarking.

UNIT II STRUCTURAL AND ARCHITECTURAL CONSIDERATIONS

9 hours

Parallelism in DSP processing, Commercial digital Signal-processing Devices, Basics of TMS320C54x and C55x Families in respect of Architecture improvements and new applications fields, Data Addressing Modes of TMS320C54xx., TMS320C5416 DSP Architecture, Memory Map, Interrupt System, Peripheral Devices, Illustrative Examples for assembly coding.

UNIT III VLIW ARCHITECTURE

9 hours

Current DSP Architectures, GPUs as an alternative to DSP Processors, TMS320C6X Family, Addressing Modes, Optimizations, Heuristics. Replacement of MAC unit by ILP, Detailed study of ISA, Assembly Language Programming, Code Composer Studio, Mixed C and Assembly Language programming, On-chip peripherals, Simple application developments as an embedded environment.

UNIT IV FPGA BASED DSP SYSTEMS

9 hours

Limitations of P-DSPs, FPGA based signal processing design-case study of a complete design of DSP processor.

UNIT V HIGH PERFORMANCE COMPUTING USING P-DSP

9 hours

Modified bus structures and memory access in PDSPs, special addressing modes in PDSPs, Preliminaries of HPC, MPI, OpenMP, multicore DSP as HPC infrastructure.

Course Outcomes:

After completing this Unit, students will be able to

1. Identify and formalize architectural level characterization of DSP hardware.
2. Design and test various digital signal processors.
3. Write assembly language programming for various digital signal processors.
4. Utilize FPGA based DSP hardware for Control, Audio and Video Signal processing applications.
5. Understand the High-Performance Computing using P-DSP.

Text Book(s)

1. B. Venkataramani, M. Bhaskar, “Digital Signal Processors: Architecture, Programming and Applications”, Tata McGraw-Hill Education Private Limited, 2011.
2. Phil Lapsley; Jeff Bier; Amit Shoham; Edward A. Lee, “DSP Processor Fundamentals: Architectures and Features”, Wiley-IEEE Press, 1997.

Reference Books

1. Emmanuel C. Ifeachor, Barrie W. Jervis, “Digital Signal Processing: A practical approach”, Pearson-Education, PHI, 2002.
2. Sen M. Kuo, Woon-Seng S. Gan, “Digital Signal Processors: Architectures, Implementations, And Applications”, Pearson/Prentice Hall, 2005.
3. Peter Pirsch, “Architectures for Digital Signal Processing”, John Wiley & Sons, 2009

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Open Elective – V

Open Elective - V

20HUM301 PRINCIPLES OF MANAGEMENT

L T P C

3 0 0 3

Pre-requisite **NIL**

Course Description:

The course provides students with a practical and concrete explanation of management concepts and techniques they will need to manage today's and tomorrow's organizations. The course will follow the "planning, organizing, leading, controlling" format of managerial functions while putting together many small pictures presented by individual modules into one bigger meaningful picture in which managerial knowledge would apply. At the end of the course students are expected to understand role of components of bigger picture and interactions between and among components.

Course Objectives:

The course is intended to:

1. Describe the concepts of Management theories, approaches and their application with organizations around us;
2. Know the concepts of planning and management;
3. Explain the basic concepts of organization, types and structure of organization;
4. Make the students know leading, good communication, theories of motivation; and
5. Explain controlling, operations management, value chain management and management audit.

UNIT I INTRODUCTION

9 hours

Introduction to Management and Organizations- Management definition, skills, roles, goals and functions of a manager, organization, value of studying management - Managing in a Global Environment- Global Perspective, Understanding global environment, - Social Responsibility and Managerial Ethics.

UNIT II PLANNING

9 hours

Decision-making process, Types of decisions and decision making conditions, styles, biases and errors, Planning: Meaning of planning, establishing goals and developing plans, contemporary issues in planning - Strategic Management-Importance of strategic management, strategic management process, types of organizational strategies, current issues in strategic management.

UNIT III ORGANIZING

9 hours

Organizational structures - HRM process, Contemporary issues in HRM – Departmentation – decentralization – delegation of Authority - Managing Change and Innovations.

UNIT IV COMMUNICATION, MOTIVATION AND LEADING

9 hours

Functions of communication, Inter-personal communication, Barriers of Communication – Understanding Information Technology- Motivation: Theories of motivation and current issues in motivation. Leading: Leaders and Leadership, Leadership theories - Leadership issues in twenty first century

UNIT V CONTROLLING

9 hours

Process of Control – Problems of Control Process-Types of Control – Techniques of Control-Essential conditions for effective control- Contemporary issues in control – Strategic role of Operations Management - Value Chain Management.

Management Audit: Objectives-Importance-Activities of Management Auditor.

Course Outcomes:

At the end of the course, students will be able to:

1. Understand the various concepts, approaches and theories of management in the real situation,
2. Analyze the concept of planning and apply on the decisions in strategic management,
3. Compare organization structure designs and chart diligently with theoretical learning concepts,
4. Apply communication and theories of motivation in an organization, and
5. Understand various tools for controlling organizational performance, management audit and apply to achieve the corporate objectives.

Text Book(s)

1. Stephen P. Robbins, Mary Coulter “Management”, Pearson Education, 2010, 10th edition.
2. P. Subba Rao “Management and Organizational Behavior”, Himalaya Publishing House.

Reference Books

1. Gary Dessler, “Management”, Prentice Hall, Inc., 1998, 1st edition.
2. Daft Richard L. ‘Management’ Thomson South Western, 5th edition.
3. Koontz H. and Weihrich H., "Essentials of Management", McGraw Hill Int. ed., 2004, 6th edition.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Open Elective - V

20HUM302 HUMAN RESOURCE DEVELOPMENT

L T P C

3 0 0 3

Pre-requisite **NIL**

Course Description:

The course content includes: Introduction to HRM, strategic human resource challenges, work flows, job analysis, managing diversity, concepts, goals, mechanism and system of HRD, recruitment and selection, downsizing and outplacement, appraising and managing employee performance, training, career development, managing compensation, rewarding performance, designing benefit plans, employee relation and employee discipline, and workplace safety and health.

Course Objectives:

The course is intended to:

1. Explain the nature and scope of HRM, its functions, policies and strategies;
2. Describe the human resource planning, work analysis and importance in designing jobs;
3. Know the recruitment, selection and the process of performance appraisal;
4. Make the student to learn about training and development, compensation management and
5. Explain the trade unions, industrial relations and grievance.

UNIT I INTRODUCTION

9 hours

Understanding the nature and scope of Human Resource Management- Definition, Evolution of HRD, Functions - objectives, organization of department. Human Resource Management v/s Personnel Management, Role and responsibility of HRM.

UNIT II HUMAN RESOURCE PLANNING

9 hours

Human Resource Planning- Factors affecting HRP, the planning process, managerial succession planning. Job Analysis, Methods of collecting job data, Competency based Job Analysis, Job design approach, contemporary issues in Job Description.

**UNIT III RECRUITMENT, SELECTION AND PERFORMANCE
APPRAISAL**

9 hours

Recruiting and selecting employees-, Selection process, Barriers, selection in India. Performance Management, Process of Performance Appraisal, Methods of Performance Appraisal - Errors in Performance Appraisal.

UNIT IV TRAINING AND DEVELOPMENT

9 hours

Meaning – importance and benefits of Training and Development, Training v/s Development – Training Methods - challenges in training - Career development: Definition-objectives—importance

Dept. of Computer Science & Engineering (IoT)

of career development – Reward Management – Compensation Management: Nature-Objectives-Components of Compensation- Theories of Compensation-Factors influencing employee compensation.

UNIT V INDUSTRIAL RELATIONS, TRADE UNIONS

9 hours

Trade Unions: Importance-Objectives- Functions and Structure of the Trade Unions- Trade Union movement in India- Industrial Relations: Nature--Importance- Approaches-essential conditions for sound IR. Industrial Disputes: Meaning – Types- Causes-Industrial disputes settlement machinery. Grievance: Sources and Process of Redressal,

Course Outcomes:

At the end of the course, students will be able to:

1. Understand the concept of HRM, its nature, scope, functions, policies and strategies;
2. Analyse human resource planning and apply in designing jobs;
3. Evaluate the recruitment, selection and the process of performance appraisal;
4. Understand the importance of training and development activities, compensation management and
5. Examine the trade unions, industrial relations and grievance.

Text Book(s)

1. Aswathappa K., Human Resource Management- Text and Cases, Tata McGraw Hill, 6th Edition, 2010
2. Gomez-Mejia, L.R., Balkin, D.B., & Cardy, R.L. Managing Human Resource Management 6th edition, Pearson Edu. 2007.
- 3 VSP Rao, Human Resource Management-Text & Cases, Excel Books.

Reference Books

1. Garry Dessler, BijuVarkkey , Human Resource Management ,11th Edition, Pearson Education, 2009.
- 2 R. Wayne Mondy, Human Resource Management, 10th Edition, 2010
Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Open Elective - V

20HUM303 SOFT SKILLS

L T P C

3 0 0 3

Pre-requisite **NIL**

Course Description:

Soft skills are the personal attributes that make a student a valuable employee and a wholesome personality. They include aspects like communication, teamwork, problem-solving, and time management. Employers are increasingly looking for employees with strong soft skills, as they are essential for success in the workplace. This course will help students analyze themselves and build soft skills needed for their personal and career success.

Course Objectives:

The course is intended to:

1. Analyze their strengths and skills, and build confidence in presenting themselves
2. Work seamlessly as a team and negotiate for solutions
3. Think laterally and critically to evaluate a situation and present it with clarity
4. Write business emails effectively
5. Prepare holistically for a job interview

UNIT I SELF ANALYSIS AND DEVELOPMENT

10 hours

Personal ethics (politeness, empathy, and honesty); self-motivation / building confidence and assertiveness; identifying one's unique selling points (USPs) through skills introspection and recognizing strengths and weaknesses; nurturing strengths and fixing weaknesses; self-introduction.

UNIT II TEAM WORKING AND DYNAMICS

12 hours

Brainstorming techniques, team building, collaboration, and negotiation skills; team role plays (involving negotiation and decision making); group discussion etiquette (greetings and body language), idea generation, and common GD phrases; group discussion practice

UNIT III THINKING AND REASONING SKILLS

6 hours

Lateral thinking, critical thinking and logical reasoning through texts, images, and videos; Speaking activities (e.g. JAM) involving lateral thinking and reasoning through thought-provoking pictures, videos, cartoons, comic strips or articles.

UNIT IV PRESENTATION SKILLS

7 hours

Presentation etiquette; slides design; and presentation practice.

UNIT V INTERVIEW SKILLS

10 hours

Preparing resume and cover letter for job interviews; interview etiquette: dress code, body language, tone, and greeting; HR interviews: answering common interview questions, practice for HR interviews.

Course Outcomes:

At the end of the course, students will be able to:

1. Understand and express themselves with confidence
2. Work as an active team member
3. Think and express their views logically and speak on varied topics without hesitations.
4. Prepare business presentations and emails effectively
5. Attend job interviews with confidence

Text Book(s)

1. Sabina Pillai and Agna Fernandez; Soft Skills and Employability Skills; Cambridge University Press, 2018.
2. Archana Ram, PlaceMentor, 2018, Oxford University Press

Reference Books

1. Karen Kindrachuk, Introspection, 2010, 1st Edition
2. Karen Hough, The Improvisation Edge: Secrets to Building Trust and Radical Collaboration at work, 2011, Berrett-Koehler Publishers
3. Colin Swatridge, Oxford Guide to Effective Argument and Critical Thinking 1st Edition, Oxford University Press

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Open Elective - V

20HUM304 NATIONAL CADET CORPS

L T P C
3 0 0 3

Pre-requisite: NCC B-Certificate

Course Description:

The main aim of this course is to mould the youth into responsible citizens of the nation. It helps to improve character and leadership qualities towards nation building. This course also motivates the youth to offer Selfless service to the society and nation. The course comprises Common subjects, Service subjects of NCC, societal aspects and basic organization of Indian Armed Forces.

Course Objectives:

This course enables the student to –

1. Get aware of NCC organization and general structure of Defence Forces.
2. Learn leadership and national integration.
3. Motivate towards to maintain Health and hygiene, personality development.
4. Learn elementary characteristics of disaster management, Field craft and Battle craft.
5. Acknowledge the Social activities, Communication and Military History.

UNIT I

10 hours

INTRODUCTION TO NCC

Introduction, History of NCC , NCC Motto, NCC Flag, Aims of NCC, Cardinal points of NCC, Organization of defence forces in general, Organizational structure of Indian Army(Armed forces), Organizational structure of NCC, NCC Song, Incentives of NCC, Ranks in Army, Navy and Air Force, current representatives – Certificate Examination in NCC– Honours and Awards.

FOOT DRILL BASICS

Aims of Drill, Word of Commands, Attention, Stand at Ease, Turning Left, Right and Inclining at the Halt. Sizing, Forming up in three Ranks and Numbering, Open and Close March Order, Dressing the Squad, Saluting at the Halt, Getting on Parade, Falling Out and Dismissing, Marching, Guard of Honour.

UNIT II

10 hours

LEADERSHIP

Meaning, Leadership Traits, Types of Leadership, Discipline & Duty of an Indian Citizen, Motivation, Code of Ethics, Perception, Communication, Customs of Services, Importance of Team Work, leaders(swami Vivekananda).

NATIONAL INTEGRATION

Meaning and Importance, Unity in Diversity, Indian History and Culture, Religion and Customs of India, India and its Neighbours, Contribution of Youth in Nation Building, Contribution of leaders in nation unification .

UNIT III

12 hours

HEALTH AND HYGIENE

Structure and Function of Human Body, Hygiene and Sanitation, Preventable Diseases, First Aid, Yoga:

Dept. of Computer Science & Engineering (IoT)

Introduction and Exercises, Physical and Mental Health, Fractures: Types and Treatment.

PERSONALITY DEVELOPMENT

Introduction to personality development, Physical and social factors influencing / shaping personality, psychological and philosophical factors influencing / shaping personality, Self-awareness, SWOT analysis, mind set, interpersonal relationship and communication, effective communication, barriers of communication.

ENVIRONMENT AND ECOLOGY

Environment: Meaning, Global Warming, Acid Rain, Depletion of Ozone Layer, Conservation of Environment. Ecology: Introduction, Component of Ecological System, Forest Ecology, Wild Life, Pollution Control.

UNIT IV

10 hours

DEFENCE AND DISASTER MANAGEMENT

Civil Defence: Meaning, Organization and its Duties, Civil Defence Services, Fire Fighting : Meaning, Mode of Fire, Fire Fighting Parties, Fire Fighting Equipment. Introduction, Classification of Disaster: Natural Disaster & Man Made Disaster, Disaster Management During Flood, Cyclone and Earth Quake, Assistance in Removal of Debris, Collection and Distribution of Aid Material, Message Services.

SOCIAL SERVICE ACTIVITIES (Social Service And Community Development)

Basics of Social Service, Weaker Sections in the Society and its Identification, Contribution of Youth towards Social Welfare, NGOs and their Role and Contribution , Social Evils, Drug Abuse, Family Planning, Corruption, Counter Terrorism, Eradication of Illiteracy – Aids Awareness programme – Cancer Awareness Programme.

UNIT V

10 hours

COMMUNICATION

Types of communication, characteristics of wireless technology, Walkie/talkie, Basic RT procedure, Latest trends and development(Multimedia, video conferencing, IT)

MILITARY HISTORY

Biography of Indian Historical Leaders: Chatrapati Shivaji, Maharana Pratap, Akbar Famous Battles / Wars of India: Indo – Pak War 1971(all wars), Kargil War.(Categorise: before/ After independence)
Biography of Successful Leaders: General Patton, General Mac. Arthur, Field Marshal Sam Maneksha.

Course Outcomes:

At the end of the course, students will be able to:

6. Analyse the NCC structure and different ranks in Indian Armed Forces along with foot drill.
7. Notify the leadership traits and the need of national integrity towards nation building.
8. Instill respect and responsibility towards personal health and hygiene, develop dynamic personality with adequate qualities.
9. Identify different disasters and judging measurements on the ground.
10. Recognise various communication devices, analyse the Military Organization.

Dept. of Computer Science & Engineering (IoT)

Text Books:

1. HAND BOOK OF NCC – “SANJAY KUMAR MISHRA, MAJOR RC MISHRA”, published by Kanti prakashan-2020.
2. NCC HAND BOOK - “SHASHI RANJAN & ASHISH KUMAR”, published by Goodwin Publications-2021.

Reference Books:

1. NCC Hand book – “R.Gupta’s”, Ramesh Publishing House-2021.
2. NCC (ARMY WING)- “R.Guptas’s”,RPH Editorial Board-2021
3. Hand Book Of N.C.C. – “Ashok Pandey”, Kanti Publications-2017

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination

Professional Elective I

Professional Elective - I

20CSO401 DATA MINING AND DATA WAREHOUSING

L T P C

3 0 0 3

Pre-requisite: Nil

Course Description:

In this course we explore how this interdisciplinary field brings together techniques from databases, statistics, machine learning, and information retrieval. We will discuss the main data mining methods currently used, including data warehousing and data cleaning, clustering, classification, association rules mining, and web mining.

Course Objectives:

1. To understand the principles of Data warehousing and Data Mining.
2. To be familiar with the Data warehouse architecture and its Implementation.
3. To know the Architecture of a Data Mining system.
4. To understand the various Data preprocessing Methods.
5. To perform classification and prediction of data.

UNIT I INTRODUCTION TO DATA MINING

9 hours

Introduction: Introduction to Data Mining Systems – Knowledge Discovery Process – Data Mining Techniques – Issues – applications- Data Objects and attribute types, Statistical description of data, Data Preprocessing – Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures.

UNIT II MINING FREQUENT PATTERNS

9 hours

Mining Frequent Patterns, Associations and Correlations – Mining Methods- Pattern Evaluation Method – Pattern Mining in Multilevel, Multi Dimensional Space – Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

UNIT III CLASSIFICATION AND PREDICTION

9 hours

Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

UNIT IV CLUSTER ANALYSIS

9 hours

Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High-Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

UNIT V APPLICATIONS IN DATA MINING

9 hours

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Student is able to preprocess any real world dataset by using preprocessing techniques
2. Able to distinguish the OLTP and OLAP.
3. Able to implement data mining techniques such as Associations, classification.
4. Able to implement clustering techniques and its applications.
5. Students can identify the applications where data mining techniques can be applied

Text Book(s)

1. Tan, Pang-Ning & others. "Introduction to Data Mining" Pearson Education, 2006.
2. Han J & Kamber M, "Data Mining: Concepts and Techniques", Morgan Kaufmann Publishers, Second Edition, 2006

Reference Books

1. Dunham M.H. & Sridhar S. "Data Mining-Introductory and Advanced Topics", Pearson Education, 2006.
2. S. Sumathi & S.N. Sivanandam "Introduction to Data mining and its applications", Springer-Verlag.
3. Alex Berson and Stephen J. Smith "Data Warehousing, Data Mining & OLAP", Tata McGraw – Hill Edition, Tenth Reprint 2007.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Describe the phases, identify, list and compare Wireless Sensor Network.
2. Discuss and identify the choice of OS with architectural framework.
3. Understand the characteristics and selection of suitable MAC protocol for wireless sensor network.
4. Understand and describe the database management mapping onto the network topology of wireless sensor network.
5. Design the gateway on application-level information for WSN.

Text Book(s)

1. Walteneus Dargie, Christian Poellabauer, "Fundamentals of Wireless Sensor Networks Theory and Practice", John Wiley & Sons Publications, 2011.
2. Soloman, Sabrie," Sensors Handbook" Second Edition McGraw-Hill Education, 2010.

Reference Books

3. Levis, Philip, and David Gay. TinyOS programming. Cambridge University Press, 2009.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - I

20CSO403 CRYPTOGRAPHY AND NETWORK SECURITY

L T P C
3 0 0 3

Course Pre-requisite: 20CSE110

Course Description:

We cover in this course principles and practice of cryptography and network security: classical systems, symmetric block ciphers (DES, AES, other contemporary symmetric ciphers), linear and differential cryptanalysis, perfect secrecy, public-key cryptography (RSA, discrete logarithms), algorithms for factoring and discrete logarithms, cryptographic protocols, hash functions, authentication, key management, key exchange, signature schemes, email and web security, viruses, firewalls, digital right management, and other topics.

Course Objectives:

1. Understand the fundamental principles of access control models and techniques, authentication and secure system design.
2. Have a strong understanding and describe of different cryptographic protocols and techniques be able to use them.
3. Become knowledgeable in various methods and protocols to maintain E-mail security, and web security.
4. Analyze & develop methods for authentication, access control, intrusion detection and prevention.
5. Identify and mitigate software security vulnerabilities in existing systems.

UNIT I SYMMETRIC CIPHERS 9 hours

Introduction: Security Attacks, Services & Mechanisms, A Model for Network security. Symmetric Key Cryptography: Classical encryption techniques, Block cipher operations, DES, AES.

UNIT II ASYMMETRIC CIPHERS 9 hours

Introduction: Modular arithmetic (addition, multiplication, inverse, exponentiation and Euler's Theorem) Public key Cryptography principles, RSA: generating keys, encryption and decryption. Other Public-key cryptosystems: Diffie-Hellman, El-Gamal cryptosystems.

UNIT III CLASSIFICATION AND PREDICTION 9 hours

Authentication requirements, Message Authentication Code, Cryptographic Hash functions: Applications of Cryptographic Hash functions, Secure Hash Algorithm., HMAC, Digital Signatures, Digital Signature Standard.

UNIT IV MUTUAL TRUST 9 hours

Key management and Distribution: Symmetric key distribution using Symmetric and Asymmetric encryption, Distribution of public keys, User authentication Protocols- Kerberos X.509 certificates.

Dept. of Computer Science & Engineering (IoT)

UNIT V NETWORK AND INTERNET SECURITY

9 hours

Transport level security: Web security issues, Secure Socket Layer (SSL), Transport Layer Security(TLS),E-mail Security: PGP,S/MIME System Security: Intruders and Viruses, Firewalls, Intrusion Detection.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Explain the basic definitions and concepts of the information security
2. Analyze & differentiate between several types of security schemes
3. Design & develop information security schemes
4. Illustrate the threats.
5. Implement security schemes to protect information system resources

Text Book(s)

1. Stallings, W., Cryptography and Network Security: Principles and Practice, 5th ed., Prentice Hall PTR.,2011.
2. Cryptography and Network Security; 2nd ed. , Behrouz A. Forouzan , Debdeep Mukhopadhyay, McGraw Hill,2011.

Reference Books

1. Atul Kahate, Cryptography and Network Security, 2nd ed., Tata Mcgraw Hill education Private Limited, 2011.
2. Computer Security, Dieter Gollman,3rd ed, Wiley Publications,2011.
3. Introduction to Computer Security, Matt Bishop,1st ed,Addison-Wesley Professional,2004.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - I

20CSO404 IoT ARCHITECTURE AND PROTOCOLS

L	T	P	C
3	0	0	3

Pre-requisite NIL

Course Description:

The purpose of this course is to impart knowledge on IoT Architecture and various protocols, also study their implementations in real world applications.

Course Objectives:

1. To Understand the Architectural Overview of IoT.
2. To Understand the IoT Reference Architecture and Real-World Design Constraints.
3. To Understand the various IoT Protocols at Datalink, Network Layer.
4. To Analyse various IoT Protocols at transport & session layer.
5. To Analyse various IoT Protocols at Service Layer & Security related Issues.

UNIT I OVERVIEW OF IoT ARCHITECTURE 9 hours

IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

M2M and IoT Technology Fundamentals- Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service (XaaS), M2M and IoT Analytics, Knowledge Management

UNIT II IoT REFERENCE ARCHITECTURE 9 hours

IoT Architecture - State of the Art – Introduction, State of the art, Reference Model and architecture, IoT reference Model - IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views.

Real-World Design Constraints- Introduction, Technical Design constraints-hardware is popular again, Data representation and visualization, Interaction and remote control.

UNIT III IoT DATA LINK LAYER & NETWORK LAYER PROTOCOLS 9 hours

PHY/MAC Layer - (3GPP MTC, IEEE 802.11, IEEE 802.15), Wireless HART, Z-Wave, Bluetooth Low Energy, Zigbee Smart Energy, DASH7

Network Layer-IPv4, IPv6, 6LoWPAN, 6TiSCH, ND, DHCP, ICMP, RPL, CORPL, CARP

UNIT IV TRANSPORT & SESSION LAYER PROTOCOLS 9 hours

Transport Layer - (TCP, MPTCP, UDP, DCCP, SCTP) - (TLS, DTLS)

Session Layer- HTTP, CoAP, XMPP, AMQP, MQTT

Dept. of Computer Science & Engineering (IoT)

UNIT V SERVICE LAYER PROTOCOLS & SECURITY

9 hours

Introduction to Databases- File System Vs Database System - Data Models- Schemas and Instances - DBMS Architecture- Centralized - Client Server - Database Applications.

Service Layer -oneM2M, ETSI M2M, OMA, BBF – **Security in IoT Protocols** – MAC

802.15.4, 6LoWPAN, RPL, Application Layer, **Case Study** - Environment Monitoring System

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Comprehend the essentials of IoT and its applications.
2. Understand the concepts of IoT Architecture Reference model and IoT reference architecture
3. Analyze various IoT data link layer Protocol & Network Layer Protocol.
4. Apply IP based protocols and Authentication Protocols for IoT.
5. Design IoT-based systems for real-world problems.

Text Book(s)

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - I

20CSO405 DATA VISUALIZATION TECHNIQUES

L T P C
3 0 0 3

Pre-requisite NIL

Course Description:

This course is all about data visualization, the art and science of turning data into readable graphics. Students will explore how to design and create data visualizations based on data available and tasks to be achieved. Students will also learn to evaluate the effectiveness of visualization designs, and think critically about each design decision, such as choice of color and choice of visual encoding.

Course Objectives:

1. Provide the foundations necessary for understanding and extending the current state of the art in data visualization.
2. Understand why visualization is an important part of data analysis
3. Understand the components involved in visualization design including graphical perception and techniques for visual encoding and interaction.
4. Exposure to interaction techniques corresponding analysis tasks.
5. The ability to read and discuss research papers from the visualization literature.

UNIT I OVERVIEW OF DATA VISUALIZATION

9 hours

Why Visualize Data? – Data abstraction: Dataset Types, Attribute Types, Semantics - Task Abstraction: Actions, Targets - Analyzing and Deriving - Marks and Channels - Defining Marks and Channels - Using Marks and Channels - Channel Effectiveness.

UNIT II TABLES, SPATIAL DATA, NETWORKS AND TREES

9 hours

Arrange Tables: Arrange by Keys and Values, Scatterplots, Bar Charts, Stacked Bar Charts, Stream graphs, Dot and Line Charts, Cluster Heat maps, Scatterplot Matrix, Pie Charts – Arrange Spatial data: Geometry, Scalar Fields, Vector Fields, Arrange Networks and Trees: Connection, Matrix Views, Costs and Benefits.

UNIT III COLOR AND SIZE IN VISUALIZATION

9 hours

Color Theory–Colormaps - Other Channels - Manipulate View: Change View over Time, Select Elements Changing Viewpoint, Reducing Attributes.

UNIT IV INTERACTION TECHNIQUES

9 hours

Facet into Multiple views: Coordinate Views, Partition into Views, Superimpose Layers, Static Layers, Dynamic Layers.

UNIT V DATA REDUCTION AND CASE STUDY

9 hours

Reduce Items and Attributes: Filter, Aggregate – Analyse case studies: VisDB, Hierarchical Clustering Explorer, PivotGraph, InterRing.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Craft visual presentations of data for effective communication.
2. Conduct exploratory data analysis using visualization.
3. Design and evaluate color palettes for visualization based on principles of perception.
4. Use knowledge of perception and cognition to evaluate visualization design alternatives.
5. Apply data transformations such as aggregation and filtering for visualization.

Text Book(s)

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective III

Professional Elective - III

20CSO406 DESIGN OF SMART CITIES

L T P C
3 0 0 3

Pre-requisite 20CSO107

Course Description:

This course helps to develop a basic understanding of design of smart cities and to make better decisions and build the quality infrastructures. A smart city infrastructure helps to improve operational efficiency, smart intelligent transport, and water management with the public and provide a better quality of government service and citizen welfare.

Course Objectives:

This course enables students to

1. To develop a basic understanding about various types of Infrastructure and Smart city.
2. To apply the basic need and planning concept to solve various Infrastructure problems.
3. To develop a basic understanding about various types of Intelligent Transport Systems.
4. To apply the Management of Water Resources and Related Infrastructure to solve various problems.
5. To develop a basic understanding about various types of Infrastructure Management System & Policy.

UNIT I FUNDAMENTAL OF SMART CITY & INFRASTRUCTURE 9 hours

Introduction of Smart City, Concept of smart city, Objective for smart cities, History of Smart city world and India. Need to develop smart city, Challenges of managing infrastructure in India and world, various types of Infrastructure systems, Infrastructures need assessment.

**UNIT II PLANNING AND DEVELOPMENT OF SMART CITY 9 hours
INFRASTRUCTURE**

Energy and ecology, solar energy for smart city, Housing, sustainable green building, safety, security, disaster management, economy, cyber security, Project management.

UNIT III INTELLIGENT TRANSPORT SYSTEMS 9 hours

Smart vehicles and fuels, GIS, GPS, Navigation system, traffic safety management, mobility services, E-ticketing.

**UNIT IV MANAGEMENT OF WATER RESOURCES AND RELATED 9 hours
INFRASTRUCTURE**

Storage and conveyance system of water, sustainable water and sanitation, sewerage system, flood management, conservation system.

**UNIT V INFRASTRUCTURE MANAGEMENT SYSTEM & POLICY 9 hours
FOR SMART CITY**

Integrated infrastructure management systems for smart city, Infrastructure managementsystem applications for existing smart city. Worldwide policies for smart city Government of India - policy for smart city, Mission statement & guidelines, Smart cities in India, Case studies of smart city.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Understand the necessity of infrastructural development for smart cities.
2. Identify components of infrastructure and Prepare infrastructure plan for smart city.
3. Understand smart transport system for smart cities and its application.
4. Study of water resources systems for smart city and its application.
5. Understand National and Global policies to implement for smart city development.

Text Book(s)

1. The Age of Intelligent Cities: Smart Environments and Innovation-for-all Strategies (Regions and Cities) by NicosKomninos.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - III

20CSO407 SERVICE ORIENTED ARCHITECTURE

L T P C
3 0 0 3

Pre-requisite 20CSO114

Course Description:

This course focuses on web services, service-oriented architectural model and the service-orientation design patterns and Faults. It will describe Service Oriented Architecture (SOA) concepts and principles, as well as quality considerations for developing modern software systems from a technical and organizational perspective. This course is an introduction to the XML, Web Services, Service oriented basics, J2EE and Cloud Computing.

Course Objectives:

This course enables students to

1. Provide XML concepts and exposed to build applications based on XML.
2. Gain knowledge about SOAP, HTTP and UDDI to create web services.
3. Learn SOA architecture and principles of Service Oriented Architecture.
4. Understand the role of SOA in J2EE, .NET and web services.
5. Provide an overview of cloud computing architecture and services.

UNIT I XML AND WEB SERVICES

9 hours

XML structure – Elements – Creating Well-formed XML - Name Spaces – Schema Elements, Types, Attributes – XSL Transformations – Parser – Web Services Overview – Architecture, Xquery.

UNIT II WSDL, SOAP and UDDI

9 hours

WSDL - Overview Of SOAP – HTTP – XML-RPC – SOAP: Protocol – Message Structure – Intermediaries – Actors – Design Patterns And Faults – SOAP With Attachments – UDDI, Orchestration and Choreography.

UNIT III SERVICE ORIENTED ARCHITECTURE (SOA) BASICS

9 hours

Roots of SOA – Characteristics of SOA - Comparing SOA to client-server and distributed internet architectures – Anatomy of SOA- How components in an SOA interrelate - Principles of service orientation – Service Layers.

UNIT IV SOA in J2EE and .NET

9 hours

SOA platform basics – SOA support in J2EE – Java API for XML-based web services (JAX-WS) - Java architecture for XML binding (JAXB) – Java API for XML Registries (JAXR) - Java API for XML based RPC (JAX-RPC) – JAX-RS SOA support in .NET – ASP.NET web services.

UNIT V CLOUD COMPUTING

9 hours

Vision of Cloud computing – Cloud Definition – Characteristics and Benefits – Virtualization – Cloud computing Architecture – Cloud Reference Model, Types of Clouds – Cloud Platforms in Industry, Business process design – Case Study.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course, students can able to

1. Build applications based on XML.
2. Apply the SOAP, HTTP and UDDI services in the web applications.
3. Apply SOA architecture and the underlying design principles for the web projects.
4. Understand the role of SOA in J2EE and .NET.
5. Articulate the cloud computing architecture and the types of clouds.

Text Book(s)

1. Thomas Erl, Service-Oriented Architecture: Concepts, Technology, and Design, Pearson Education, 2006.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

At the end of the course students can able to

1. Understand the fundamental concepts in malware analysis.
2. Implement concepts of static Analysis and Dynamic Analysis.
3. Perform code analysis in assembly language.
4. Design and implement Debugging of Malicious Binaries.
5. Implement malicious programs that use code injection and hooking techniques.

Text Book(s)

1. Monnappa K A, Learning Malware Analysis, Published by Packt Publishing Ltd.2018,First edition,ISBN 978-1-78839-250-1.

2. Honig, Andrew;Sikorski, Michael, Practical Malware Analysis, No Starch Press,First edition,ISBN:1593272901, 9781593272906.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - III

20CSO409 INFORMATION RETRIEVAL

L T P C
3 0 0 3

Pre-requisite: 20CSO108

Course Description:

Information retrieval is the science of searching for information in a document, searching for documents themselves, and also searching for the metadata that describes data, and for databases of texts, images or sounds. This course studies the basic principles and practical algorithms used for information retrieval and text mining.

Course Objectives:

This course enables students to

1. To understand the basics of Information Retrieval and Text retrieval systems.
2. Expose the student to a variety of retrieval models.
3. To learn about text similarity measure.
4. To understand various search engine system operations.
5. To learn the theories and techniques behind the recommender systems.

UNIT I OVERVIEW OF IR & TEXT RETRIEVAL SYSTEMS 9 hours

Information Retrieval, IR vs RDBMS, IR system, The Software Architecture of the IR System. Overview of text retrieval systems: Boolean retrieval, The term vocabulary and postings lists, Dictionaries and tolerant retrieval, Index construction and compression.

UNIT II RETRIEVAL MODELS& EVALUATION 9 hours

Vector Space Model, Variant TF-IDF(Term Frequency/Inverse Document Frequency) functions, Latent Semantic Indexing Model, Neural Network Model. Evaluation in information retrieval, Retrieval Metrics, Precision and Recall, Reference Collection, User-based Evaluation, Relevance Feedback and Query Expansion, Explicit Relevance Feedback.

UNIT III TEXT CLASSIFICATION & TEXT CLUSTERING 9 hours

The text classification problem, Naive Bayes text classification, k- nearest neighbors, Support vector Machine, Feature Selection, Vector-space clustering; K-means algorithm, Hierarchical clustering, DBSCAN algorithm, PAM and PAMK, EM algorithm, BERT model, Hybrid Model.

UNIT IV WEB RETRIEVAL AND WEB CRAWLING 9 hours

The Web – Search Engine Architectures – Cluster based Architecture – Distributed Architectures – Search Engine Ranking – Link based Ranking – Simple Ranking Functions – Learning to Rank – Evaluations -- Search Engine Ranking – Search Engine User Interaction – Browsing – Applications of a Web Crawler – Taxonomy – Architecture and Implementation.

UNIT V RECOMMENDER SYSTEM

9 hours

Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models – Neighborhood models.

Course Outcomes:

Upon completion of the course, the students will be able to:

1. To understand about text retrieval systems.
2. Discuss the models and methodologies of IR system evaluation.
3. Apply appropriate method of classification or clustering.
4. Design and implement innovative features in a search engine.
5. Design and implement a recommender system.

Text Book(s)

1. Ricardo Baeza-Yates and Berthier Ribeiro-Neto, —Modern Information Retrieval: The Concepts and Technology behind Search, Second Edition, ACM Press Books, 2011.

Reference Books

1. Information Retrieval: Implementing and Evaluating Search Engines. Stefan Buttcher, Charlie Clarke, Gordon Cormack, MIT Press, 2010.
2. Ricci, F, Rokach, L. Shapira, B.Kantor, —Recommender Systems Handbook, First Edition, 2011.
3. Search Engines: Information Retrieval in Practice. Bruce Croft, Donald Metzler, and Trevor Strohman, Pearson Education, 2009.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - III

20CSO410 DESIGN PATTERNS

L T P C
3 0 0 3

Pre-requisite Nil

Course Description:

This course describes simple and elegant solutions to specific problems in object-oriented software design. The course also includes a design case study to demonstrate how design patterns apply in practice.

Course Objectives:

This course enables students to

1. Introduce the fundamental concepts of Design Patterns and Its Types
2. Expose the students to a variety of Design pattern and its types in various platforms.
3. Applying the various types of patterns to get the solutions for various problems.
4. Familiarize the student with application program interfaces for various design patterns
5. Enable students to create simple and Complex patterns.

UNIT I INTRODUCTION TO DESIGN PATTERN

9 hours

Introduction, MVC, Describing Design Patterns, The Catalog of Design Patterns, Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern..

UNIT II CREATIONAL PATTERNS

9 hours

A Case Study: Designing a Document Editor: Design Problems, Document Structure, Formatting, Embellishing the User Interface, and Supporting Multiple Look – and - Feel Standards, Supporting Multiple Window Systems, User Operations Spelling Checking and Hyphenation, Summary.

Creational Patterns: Abstract Factory, Builder, Factory Method, Prototype, Singleton, Discussion of Creational Patterns.

UNIT III STRUCTURAL PATTERN

9 hours

Structural Pattern Part - I: Adapter, Bridge, and Composite

Structural Pattern Part - II: Decorator, Façade, Flyweight, Proxy.

UNIT IV BEHAVIOURAL PATTERN

9 hours

Behavioural Patterns Part - I: Chain of Responsibility, Command

Behavioural Patterns Part - II: Mediator, Memento, Observe

UNIT V BEHAVIOURAL PATTERN-II

9 hours

Behavioural Patterns Part – II(cont'd): State, Strategy, Template Method, Visitor, Discussion of Behavioral Patterns. What to Expect from Design Patterns, A Brief History, The Pattern Community An Invitation, A Parting Thought.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Interpret the design pattern and its types.
2. Develop design solutions using creational patterns.
3. Apply structural patterns to solve design problems.
4. Construct design solutions by using behavioural patterns.
5. Design and develop a solution for a given problems using design patterns.

Text Book(s)

1. Erich Gamma , Design Patterns ; Publisher, Pearson Education India, 1995 ; ISBN, 8131769461, 9788131769461.

Reference Books

1. Eric Freeman, Head First Design Patterns ,O Reilly Media Inc ,2004, ,ISBN 9780596007126.
2. Allan shalloway, Design Patterns Explained: A New Perspective on Object-Oriented Design (Software Patterns Series), , Pearson Education India,2004,ISBN 978-0321247148

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective – IV

Dept. of Computer Science & Engineering (IoT)

Professional Elective - IV

20CSO411 PRIVACY AND SECURITY IN IOT

L T P C
3 0 0 3

Pre-requisite 20CSO107

Course Description:

The growing importance of Internet of Things (IoT) and their use to support critical applications, has made security & privacy a central issue. The general theme of this course is to provide students an overview for the security and privacy.

Course Objectives:

1. To know basic concepts of security & privacy.
2. To know the state-of-the-art methodologies in Cyber Physical system.
3. To impart knowledge on Model threats and countermeasures.
4. To explore the Privacy Preservation and Trust Models in Internet of Things (IoT)
5. To apply the concept of Internet of Things Security in the real world scenarios

UNIT I INTRODUCTION

9 hours

Fundamentals - Architecture of IoTs - IoT Security Requirements - IoT Privacy Preservation Issues- Attack Models – Attacks to Sensors in IoTs - Attacks to RFIDs in IoTs - Attacks to Network Functions in IoTs - Attacks to Back-end Systems.

UNIT II CRYPTO FOUNDATIONS & BLOCK CHAINS

9 Hours

Block ciphers, message integrity, authenticated encryption, hash functions, Merkle trees, elliptic curves, public-key crypto(PKI), signature algorithms. Crypto-currencies, Bitcoin P2P network, distributed consensus, incentives and proof-of-work, mining, script and smart contracts, wallets: hot and cold storage, anonymity, altcoins.

UNIT III PRIVACY PRESERVATION FOR IoT

9 hours

Privacy Preservation Data Dissemination- Privacy Preservation Data Dissemination- Social Features for Location Privacy Enhancement in Internet of Vehicles- Lightweight and Robust Schemes for Privacy Protection in Key Personal IoT Applications: Mobile WBSN and Participatory Sensing.

UNIT IV TRUST MODELS FOR IoT

9 hours

Authentication in IoT- Computational Security for the IoT- Privacy-Preserving Time Series Data Aggregation- Secure Path Generation Scheme for Real-Time Green Internet of Things- Security Protocols for IoT Access Networks- Framework for Privacy and Trust in IoT- Policy-Based Approach for Informed Consent in Internet of Things.

UNIT V INTERNET OF THINGS SECURITY

9 hours

Security and Impact of the Internet of Things (IoT) on Mobile Networks- Networking Function Security-IoT Networking Protocols, Secure IoT Lower Layers, Secure IoT Higher Layers, Secure Communication Links in IoTs, Back-end Security -Secure Resource Management, Secure IoT Databases, Security Products.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Identify the areas of different attacks for the Internet of Things.
2. Assess different Internet of Things technologies and their applications.
3. Customize real time data for IoT applications.
4. Solve IoT security problems using cryptography techniques.
5. Build security systems using elementary blocks.

Text Book(s)

1. Hu, Fei. Security and privacy in Internet of things (IoT): Models, Algorithms, and Implementations, 1st edition, CRC Press, 2016.
2. Russell, Brian, and Drew Van Duren. Practical Internet of Things Security, 1st edition, Packt Publishing Ltd, 2016.

Reference Books

1. Whitehouse O. Security of things: An implementers' guide to cyber-security for internet of things devices and beyond, 1st edition, NCC Group, 2014
2. DaCosta, Francis, and Byron Henderson. Rethinking the Internet of Things: a scalable approach to connecting everything, 1st edition, Springer Nature, 2013.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - IV

20CSO412 REAL TIME SYSTEMS

L T P C
3 0 0 3

Pre-requisite 20CSO103

Course Description:

To introduce the fundamental problems, concepts, and approaches in the design and analysis of real-time systems. To study issues related to the design and analysis of systems in communication, database with real-time constraints.

Course Objectives:

This course enables students to

1. To study the basic of tasks and scheduling.
2. To understand the Uniprocessor and Multi-Processor Scheduling.
3. To analyze real time communication.
4. To understand the real time databases and reliability models for Hardware Redundancy.
5. To learn the real time modelling and tools.

UNIT I INTRODUCTION TO TASK SCHEDULING 9 hours

Introduction-Issues in Real Time Computing, Structure of a Real Time System, Task classes, Performance Measures for Real Time Systems, Task Assignment and Scheduling–Classical uniprocessor scheduling algorithms, RM algorithm with different Cases-Priority ceiling precedence constraints- using of primary and alternative tasks.

UNIT II UNI AND MULTI-PROCESSOR SCHEDULING 9 hours

Uniprocessor scheduling of IRIS tasks, Task assignment, Utilization balancing – Next fit- Bin packing- Myopic off-line – Focused addressing and bidding- Buddy strategy- Fault Tolerant Scheduling. -Aperiodic scheduling –Spring algorithm, Horn algorithm- Bratley. –Sporadic scheduling.

UNIT III REALTIME COMMUNICATION 9 hours

Introduction-VTCSMA–PB CSMA-Deterministic collision resolution protocol-DCR for multi packet messages – dynamic planning based-Communication with periodic and aperiodic messages.

UNIT IV REALTIME DATABASES 9 hours

Basic Definition, Realtime Vs General purpose databases, Main Memory Databases, Transaction priorities, Transaction Aborts, Concurrency control issues, Disk Scheduling Algorithms, Two-phase Approach to improve Predictability, Maintaining Serialization Consistency, Databases for Hard RealTime System.

UNIT V REAL-TIME MODELLING AND CASE STUDIES

9 hours

Petrisnets and applications in real-time modelling, Air traffic controller system–Distributed air defence system.

Course Outcomes:

After completing this course, students will be able to

1. To understand advanced concepts in theory of computer science.
2. To understand advanced concepts in applications of computer science.
3. To apply knowledge of advanced computer science to formulate the problems in computing and solve them.
4. To learn emerging concepts in theory and applications of computer science.
5. To design and conduct experiments as well as to analyze and interpret data.

Text Book(s)

1. C. M. Krishna, Kang G.Shin, “RealTime Systems”, TataMcGraw-Hill,2010.

Reference Books

1. C. Siva Ram Murthy, G.Manimaran, “Resource management in real-time systems and networks”, PHI, 2009.
2. Giorgio C. Bortuzzo, “Hard real-time computing systems: predictable scheduling algorithms and applications”, Springer, 2008.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - IV

20CSO413 DEEP LEARNING

L T P C
3 0 0 3

Pre-requisite **20MAT112**

Course Description:

Deep learning (DL) is a subset of machine learning, which is essentially a neural network with three or more layers. These neural networks attempt to simulate the behaviour of the human brain—albeit far from matching its ability—allowing it to “learn” from large amounts of data. Deep Learning drives many artificial intelligence (AI) applications and services that improve automation, performing analytical and physical tasks without human intervention.

Course Objectives:

This course enables students to

1. Introduce the fundamental techniques and principles of Neural Networks
2. Expose the student the different models in CNN and their applications
3. To learn and analyze deep unsupervised learning.
4. Study the application of deep learning models for computer vision tasks.
5. Enable proper understanding of applications of deep learning models for NLP tasks.

UNIT I INTRODUCTION

9 hours

Supervised Learning with Neural Networks - Multiplayer Perceptron - Feed Forward Neural networks - Gradient descent and the back propagation algorithm – Local Minimum, Regularization-Problem of feature extraction & filter design, Auto encoder.

UNIT II CONVOLUTIONAL NEURAL NETWORKS

9 hours

CNN Architecture - CNN Models, Restricted Boltzmann machine, Training of – AlexNet – VGGNet – ResNet – DenseNet – InceptionNet – Vanishing Gradient problem with Recurrent Neural Networks: Long Short Term Memory (LSTM), Gated Recurrent Unit, Encoder Decoder architectures – Data augmentation – Transfer Learning

UNIT III DEEP UNSUPERVISED LEARNING

9 hours

Auto encoders - Variational Auto-encoders - Adversarial Generative Networks, Popular variants of GAN – Applications of GAN - DBM Attention and memory models - Dynamic memory networks - Deep and restricted Boltzmann Machines

UNIT IV APPLICATIONS OF DEEP LEARNING TO COMPUTER VISION:

9 hours

Image segmentation - object detection using YOLOv7 - automatic image captioning - Image generation with Generative adversarial networks - video to text with LSTM models - Attention models for computer vision tasks –Image segmentation with U-Net

UNIT V APPLICATIONS OF DEEP LEARNING TO NLP

9 hours

Introduction to NLP and Vector Space Model of Semantics, Word Vector Representations: Continuous Skip-Gram Model, Continuous Bag-of-Words model (CBOW), Opinion Mining using Recurrent

Dept. of Computer Science & Engineering (IoT)

Neural Networks: Parsing and Sentiment Analysis using Recursive Neural Networks: Sentence Classification using Convolutional Neural Networks.

Course Outcomes:

After completing this Unit, students will be able to

1. Understand the basic concepts of Neural Networks and Deep Learning.
2. Understand the architecture of various CNN and RNN deep models.
3. Explain the structure and functional strategies of various deep unsupervised models
4. Understand the architecture of various CNN models to perform computer vision tasks.
5. Illustrate the concept of RNN models for sequence data to solve relevant problems.

Text Book(s)

1. Charu C. Aggarwal, "Neural Networks and Deep Learning: A Textbook", Springer; 1st ed. 2018 edition
2. Ian Goodfellow, YoshuaBengio and Aaron Courville, " Deep Learning", published by MIT Press

Reference Books

1. Francois Chollet, "Deep Learning with Python", Manning Publications; 1st edition
2. Simon Haykin, "Neural Networks and Learning Machines", Pearson Prentice Hall, 3rd Edition

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - IV

20CSO414 DIGITAL IMAGE PROCESSING

L T P C
3 0 0 3

Pre-requisite 20MAT111

Course Description:

This course provides the fundamental knowledge on processing images and their application areas. In this course, different image processing operations such as enhancement, filtering, coding and segmentation are presented.

Course Objectives:

1. Acquire the basic knowledge on fundamentals of digital images.
2. Learn about image enhancement in spatial domain, image filtering and color image processing.
3. Understand various image segmentation and image coding schemes.
4. Learn image transform to analyze and modify image.
5. Learn concepts of degradation function and restoration techniques

UNIT I DIGITAL IMAGE FUNDAMENTALS 9 hours

Image Processing Fundamentals -- Elements of visual perception, image sensing and acquisition, image sampling and quantization, basic relationships between pixels – neighborhood, adjacency, connectivity, distance measures

UNIT II IMAGE ENHANCEMENT, FILTERING AND COLOR IMAGE PROCESSING 9 hours

Image Enhancements and Filtering

Gray level transformations, histogram equalization, smoothing filters – sharpening filters – two dimensional DFT and its inverse - frequency domain filters – low pass and high pass.

Color Image Processing

Color models–RGB, YUV, HIS - color complements, color slicing, tone and color corrections – Color image smoothing and sharpening - Color Segmentation.

UNIT III IMAGE CODING AND SEGMENTATION 9 hours

Image Coding –

Fundamentals of image compression, image data redundancies, Image Compression Model, Huffman Coding, Arithmetic Coding, Run Length Coding, Bit Plane Coding, Block Transform Coding, JPEG compression standard – DCT based image compression

Image Segmentation -

Dept. of Computer Science & Engineering (IoT)

Detection of discontinuities, edge linking and boundary detection – global and adaptive thresholding, region-based segmentation.

UNIT IV IMAGE TRANSFORMS

9 hours

A) Coding, inter pixel and image redundancy, 2-D Discrete Fourier Transform and frequency domain filters, Discrete Cosine Transform – its application in Baseline JPEG, Walsh Hadamard Transform, Fast Walsh Transform, Introduction to Gabor Transform.
B) Hough Transform

UNIT V IMAGE RESTORATION

9 hours

Image Restoration – degradation model, Properties, Noise models – Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering - Inverse Filtering -Wiener filtering.

Course Outcomes:

Upon successful completion of the course, students will be able to

6. Apply mathematics to represent the connectivity and neighborhood relationship between pixels and frames.
2. Understand application-based image enhancement and color image processing.
3. Develop algorithms for image segmentation and coding in image processing.
4. Use various image transforms to analyze and modify image.
5. Understand the restoration concepts and filtering techniques.

Text Book(s)

1. R.C. Gonzalez and R.E. Woods, Digital Image Processing, Pearson, 4th edition, 2018
2. Anil Kumar Jain, Fundamentals of Digital Image Processing, Prentice Hall of India, 2nd edition, 2004.

Reference Books

1. Murat Tekalp, Digital Video Processing, Prentice Hall, 2nd edition, 2015
2. Rafael C. Gonzalez, Richard E. Woods, Steven Eddins, Digital Image Processing using MATLAB, Pearson Education, Inc., 2011.
3. Digital Image Processing, Gonzalez, Woods, PHI , 2nd edition
4. Rafael C. Gonzalez, Richard E. Woods, Digital Image Processing, Pearson, Third Edition, 2010

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - IV

20CSO415 SOFTWARE PROJECT MANAGEMENT

L T P C
3 0 0 3

Pre-requisite Nil

Course Description:

Software Project Management is generally seen as a key component of successful software projects. Together with software techniques it can produce software of high quality. This course deals with the decisions and actions related to planning, organizing, leading, and controlling programs and projects. Students are expected to gain a comprehensive understanding of strategy, organization and leadership in managing projects and understanding of Processes, methods and systems used to plan, schedule and monitor projects.

Course Objectives:

This course enables students to

1. To understand the basic concepts and issues of software project management.
2. To understand successful software projects that support organization's strategic goals.
3. Develop the skills for tracking and controlling software deliverables.
4. Understand and assess the cost of risk involved in a project management
5. Understand the various software management tools.

UNIT I SPM CONCEPTS

9 hours

Definition – components of SPM – challenges and opportunities – tools and techniques – managing human resource and technical resource – costing and pricing of projects – training and development – project management techniques.

Agile Methodology: Theories for Agile Management-Agile Software Development-Traditional Model Vs Agile Model-Classification of Agile Methods-Lean Production-SCRUM.

UNIT II SOFTWARE MEASUREMENTS

9 hours

Monitoring & measurement of Software development – cost, size and time metrics – methods and tools for metrics – issues of metrics in multiple projects.

UNIT III SOFTWARE QUALITY

9 hours

Quality in Software development – quality assurance – quality standards and certifications – the process and issues in obtaining certifications – the benefits and implications for the organization and its customers – change management.

UNIT IV RISK ISSUES

9 hours

The risk issues in Software development and implementation – identification of risks – resolving and avoiding risks – tools and methods for identifying risk management.

UNIT V SPM TOOLS

9 hours

Software project management using Primavera & Redmine and case study on SPM tools.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Maintain software projects and monitor software project process
2. Design and develop project modules and assign resources
3. Understand software quality and project management techniques
4. Comprehend, assess, and calculates the cost of risk involved in a project management
5. Use Primavera & Redmine software management tools.

Text Book(s)

1. Richard H. Thayer, “Software Engineering Project Management”, John Wiley & Sons, 2ndEdition-2001
2. Royce, Walker, “Software Project Management”, Pearson Education, 2002
4. Kelker, S. A., “Software Project Management”, Prentice Hall, 2003

2. Software Project Management: A Concise Study, S. A. Kelkar, PHI.
3. Software Project Management, Joel Henry, Pearson Education.
4. Software Project Management in practice, Pankaj Jalote, Pearson Education.
5. David J. Anderson and Eli Schragenheim, —Agile Management for Software Engineering: Applying the Theory of Constraints for Business Results, Prentice Hall, 2003.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Professional Elective – V

Dept. of Computer Science & Engineering (IoT)

UNIT V SCALING

9 hours

Understanding scaling; Considering Enterprise Devops; Organizational Structure; Team Flexibility; Organizational Lifecycle; Complexity and Change; Scaling for Teams; Case Studies: Growing and Scaling Teams; Team Scaling and Growth Strategies; Scaling for Organizations; Examining Target.

Course Outcomes:

After completing this course, students will be able to

1. Interpret the DevOps foundation terminology, misconceptions and anti-patterns.
2. Apply the DevOps collaboration strategies.
3. Illustrate DevOps tools in a specific problem scenario.
4. Practice the DevOps affinity schemes.
5. Utilize the DevOps scaling approaches for teams and organization.

Text Book(s)

1. Jennifer Davis, Ryn Daniels, Effective DevOps, O'Reilly Publishers, 2018, ISBN:9781491926307.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

UNIT V APPROXIMATE SOLUTION METHODS

9 hours

Function Approximation: Value prediction, Gradient descent methods, Linear function approximation, Off-policy Approximation.

Policy Approximation: Actor-Critic Methods, R-Learning, Average Reward Setting.

Course Outcomes:

At the end of the course, students will be able to

1. To understand the fundamentals about Reinforcement Learning.
2. To structure a reinforcement learning problem.
3. To understand and apply basic RL algorithms for simple sequential decision-making problems in uncertain conditions.
4. To evaluate the performance of the solution.
5. To interpret state-of-the-art RL research and communicate their results.

Text Book(s)

1. R. S. Sutton and A. G. Barto, Reinforcement Learning - An Introduction, MIT Press, Second edition, 2015.

Reference Books

1. Marco Wiering and Martijn van Otterlo, Reinforcement Learning: State-of-the-Art, Springer, 2012.
2. Csaba Szepesvari, Algorithms for Reinforcement learning, Morgan & Claypool Publishers, 2009.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Pre-requisite: Nil

Course Description:

This course enables the students to gain knowledge on various Cybercrimes. The course briefs the students regarding the Indian IT Act, Global perspective of Cybercrimes, Cyber stalking, cyber cafe, key loggers, DoS attacks, crimes on mobile, wireless devices, etc. The knowledge gained in this course can be applied to identify, classify, estimate the criminal plans of the attackers and predict the web threats and security implications.

Course Objectives:

This course enables students to

1. Introduce the fundamentals of Cybercrime and its legal perspectives with respect to India.
2. Acquaint the student with various types of attacks and Cyber offenses
3. Make the student aware of securing devices and Inner perimeter
4. Familiarize the student with methods to secure the perimeter.

UNIT I INTRODUCTION TO CYBERCRIME

9 hours

Introduction, Cybercrime, and Information Security, Who are Cybercriminals, Classifications of Cybercrimes, And Cybercrime: The legal Perspectives and Indian Perspective, Cybercrime and the Indian ITA 2000, A Global Perspective on Cybercrimes.

UNIT II CYBER OFFENSES

9 hours

How Criminals Plan Them: Introduction, How Criminals plan the Attacks, Social Engineering, Cyber stalking, Cyber cafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector, Cloud Computing.

UNIT III TOOLS AND METHODS USED IN CYBERCRIME

9 hours

Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Keyloggers and Spywares, Virus and Worms, Trojan Horse and Backdoors, Steganography, DoS and DDoS attacks, SQL Injection, Buffer Overflow

UNIT IV SECURING DEVICES AND INNER PERIMETER

9 hours

The Three Layers of Security, Securing Host Devices, Securing Outer-Perimeter Portals, Additional Inner-Perimeter Access Options, The Inner Perimeter, Operating Systems, Operating System Security Choices, Common Operating System Security Tools, Using Local Administrative Tools, Implementing Data Encryption

UNIT V SECURING THE PERIMETER

9 hours

Perimeter Security in the Real World, Security Challenges, The Basics of Internet Security, Understanding the Environment, Hiding the Private Network, Understanding Private Networks, Protecting the Perimeter, Understanding the Perimeter, Firewalls, Network Appliances, Proxy Servers, Demilitarized Zones (DMZs), Honeypots, Extranets.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Explain the types of Cybercrimes happening all around
2. Select tools and practices that boost up the crime rate
3. Demonstrate the tools to secure inner perimeter
4. Demonstrate the contribution of key loggers, password crackers, viruses, and worms towards enabling the possibilities of Cybercrime
5. Assess the methods to protect the perimeter

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Professional Elective - V

20CSO419 SOFTWARE QUALITY ASSURANCE

L T P C
3 0 0 3

Pre-requisite Nil

Course Description:

This course covers the principles, techniques, and tools for ensuring software quality throughout the software development life cycle. Topics include testing methodologies, defect tracking, test planning and execution, and quality assurance processes. Students will gain knowledge in Quality management standards and quality assurance concepts.

Course Objectives:

1. Understand the basic tenets of software quality and quality factors.
2. Be exposed to the Software Quality Assurance (SQA) architecture and the details of SQA components.
3. Be familiar with the software quality infrastructure.
4. Explore various software quality management models and various metrics
5. Apply the concepts in preparing the quality plan and documents.

UNIT I INTRODUCTION TO SOFTWARE QUALITY & ARCHITECTURE 9 hours

Need for Software quality – Quality challenges – Software quality assurance (SQA) – Definition and objectives – Software quality factors- McCall’s quality model – SQA system and architecture – Software Project life cycle Components – Pre project quality components – Development and quality plans.

UNIT II SQA COMPONENTS AND PROJECT LIFE CYCLE 9 hours

Software Development methodologies – Quality assurance activities in the development process- Verification & Validation – Reviews – Software Testing – Software Testing implementations – Quality of software maintenance – Pre-Maintenance of software quality components – Quality assurance tools – CASE tools for software quality – Software maintenance quality – Project Management

UNIT III SOFTWARE QUALITY INFRASTRUCTURE 9 hours

Procedures and work instructions - Templates - Checklists – 3S development - Staff training and certification Corrective and preventive actions – Configuration management – Software change control – Configuration management audit -Documentation control – Storage and retrieval.

UNIT IV SOFTWARE QUALITY MANAGEMENT & METRICS 9 hours

Project process control – Computerized tools - Software quality metrics – Objectives of quality measurement – Process metrics – Product metrics – Implementation – Limitations of software metrics – Cost of software quality – Classical quality cost model – Extended model – Application of Cost model

UNIT V STANDARDS, CERTIFICATIONS & ASSESSMENTS

9 hours

Quality management standards – ISO 9001 and ISO 9000-3 – capability Maturity Models – CMM and CMMI assessment methodologies - Bootstrap methodology – SPICE Project – SQA project process standards – IEEE st 1012 & 1028 – Organization of Quality Assurance – Department management responsibilities – Project management responsibilities – SQA units and other actors in SQA systems.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Utilize the concepts in software development life cycle.
2. Demonstrate their capability to adopt quality standards.
3. Assess the quality of software product.
4. Able to develop metrics for assessment of software quality.
5. Apply the concepts in preparing the quality plan & documents.

Text Book(s)

1. Daniel Galin, “Software Quality Assurance”, Pearson Publication, 2009.

Reference Books

1. Mordechai Ben-Menachem “Software Quality: Producing Practical Consistent Software”, International Thompson Computer Press, 1997

4. Glenford J. Myers, Tom Badgett, Corey Sandler, “The Art of Software Testing”, Third Edition, John Wiley, 2012.
5. Ron Patton, “Software testing”, Second Edition, Pearson Education, 2009.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Professional Elective - V

20CSO420 HUMAN COMPUTER INTERACTION

L T P C
3 0 0 3

Pre-requisite Nil

Course Description:

HCI is an interdisciplinary field that integrates theories and methodologies across many domains including cognitive psychology, neurocognitive engineering, computer science, human factors, and engineering design. Students will gain theoretical knowledge of and practical experience in the fundamental aspects of human perception, cognition, and learning as relates to the design, implementation, and evaluation of interfaces

Course Objectives:

This course enables students to

1. To learn the foundations of Human Computer Interaction.
2. To become familiar with the design technologies for individuals and persons with disabilities.
3. To be aware of mobile HCI.
4. To learn the guidelines for user interface.

UNIT I FOUNDATIONS OF HCI 9 hours

The Human: I/O channels – Memory – Reasoning and problem solving; The Computer: Devices – Memory – processing and networks; Interaction: Models – frameworks – Ergonomics – styles – elements – interactivity- Paradigms. - Case Studies

UNIT II DESIGN & SOFTWARE PROCESS 9 hours

Interactive Design: Basics – process – scenarios – navigation – screen design – Iteration and prototyping. HCI in software process: Software life cycle – usability engineering – Prototyping in practice – design rationale. Design rules: principles, standards, guidelines, rules. Evaluation Techniques – Universal Design

UNIT III MODELS AND THEORIES 9 hours

HCI Models: Cognitive models: Socio-Organizational issues and stakeholder requirements – Communication and collaboration models-Hypertext, Multimedia and WWW.

UNIT IV MOBILE HCI 9 hours

Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools. - Case Studies

UNIT V WEB INTERFACE DESIGN 9 hours

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow - Case Studies

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Design effective dialog for HCI
2. Design effective HCI for individuals and persons with disabilities.
3. Assess the importance of user feedback.
4. Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Web sites.
5. Develop meaningful user interface.

2. Bill Scott and Theresa Neil, —Designing Web Interfaces, First Edition, O'Reilly, 2009.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Skill Oriented Courses

Skill Oriented Course – I

20CSO601 WEB SCRIPTING

L T P C
1 0 2 2

Pre-requisite NIL

Course Description:

This course will expose students to the techniques used in programming web pages for interactive content. The course begins by reviewing basic web technologies (HTML, CSS style sheets, XML, JavaScript (Node and Angular) and jQuery and exploring the use of event-driven programming in JavaScript to add interactive elements such as buttons and text fields to web pages.

This course provides the knowledge necessary to design and develop dynamic, database-driven web pages using PHP. Students also learn how to configure PHP and Web Servers like Apache, IIS, WAMP and XAMPP.

Course Objectives:

1. To build web applications using HTML, CSS and PHP with client side validations.
2. To build XML documents with DTD, Schemas and style sheets.
3. To maintain session management tracking using cookies & HTTP Sessions.
4. To develop a web application with database interaction using Node JavaScript and Angular JavaScript
5. To build jQuery enabled web applications.

UNIT – I: HTML & CSS

Introduction to HTML, HTML5 New Features, Structural, Content, Application-focused tags. History of CSS, The Power of CSS, Selectors and Pseudo Classes, Fonts and Text Effects, Colors.

- a. Creation College Website using HTML.
- b. Design a website using style sheets so that the pages have uniform style.

UNIT – II: INTRODUCTION TO JAVASCRIPT

Introduction to JavaScript, Comments, Variables, Exploring JavaScript Data Types, Popup Boxes, Objects, Functions, Conditions, Loops, Form Validation.

- a. Design a form and validate all the controls placed on the form using Java Script.
- b. Write a JavaScript program to measure the time taken by a function to execute.

UNIT – III: jQuery WITH HTML

Introduction to jQuery, Installation, Selectors, Events, Effects, Callbacks, jQuery and HTML, jQuery

- a. Working on Blink text using jQuery.
- b. Using jQuery right click to toggle background color.

Dept. of Computer Science & Engineering (IoT)

UNIT – IV: INTRODUCTION TO XML AND PHP DATABASE

Introduction to XML, Creating XML Documents, XSL, PHP Concepts: Sessions, authenticating users Database Access: Database Concepts, MYSQL database connectivity and operations.

- a. Display Library information using XML.
- b. Write a PHP program to store page views count in SESSION, to increment the count on each refresh, and to show the count on web page,
- c. Write a PHP program to connect to that database and extract data from the tables and display them. Experiment with various SQL queries.

UNIT – V: NODEJS AND ANGULAR JS

Introduction to Node JS, Advantage of Node JS, File System: Using file operation. Data base Connectivity: Connecting strings and configuring. Database operations on create table data -Angular JS forms.

- a. Working on file write, read and delete using Node.js
- b. Write a Node JavaScript program to connect to that database and extract data from the tables and display them.
- c. Using AngularJS to read input value from text box and will be displayed it.
- d. Using AngularJS to demonstrate Arithmetic operations of two numbers.

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Design pages with HTML and CSS attributes.
2. Design and develop web applications with the support of client side validations.
3. Use well-formed XML documents and develop PHP scripts with may support of object oriented features.
4. Manage the session in web browser through Cookies & Sessions and able to communicate with other web pages through form GET and POST methods.
5. Design and develop web applications with the database interactions (thorough SQL queries) and apply Node JavaScript and Angular JavaScript for faster performance.

Text Books

1. PHP 5 Recipes A problem Solution Approach Lee Babin, Nathan A Good, Frank M.Kromann and Jon Stephens.
2. Open Source Web Development with LAMP using Linux, Apache, MySQL, Perl and PHP, J.Leeand B.Ware(Addison Wesley) Pearson Education.
3. Professional Angular JS, Valeri Karpov and Diego Netto, John Willey Edition.
4. Beginning Node.JS by Basarat Syed, 2014.

Reference Books

1. HTML & CSS:The Complete Reference ,Thomas.A Powel “Fifth Edition”Kindle Edition,2017
2. Marty Hall and Larry Brown,”Core Web Programming” Second Edition, Volume I andII, Pearson Education, 2001. Learning jQuery, Jonathan Chaffer, Karl Swedberg, Third Edition, Packt Publishing Ltd

Dept. of Computer Science & Engineering (IoT)

3. HTML & CSS: The Complete Reference, Thomas A. Powell "Fifth Edition" Kindle Edition, 2017
4. Marty Hall and Larry Brown, "Core Web Programming" Second Edition, Volume I and II, Pearson Education, 2001. Learning jQuery, Jonathan Chaffer, Karl Swedberg, Third Edition, Packt Publishing Ltd

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Skill Oriented Course – I

20CSO602 ANDROID APPLICATION DEVELOPMENT

L T P C
1 0 2 2

Pre-requisite **NIL**

Course Description:

This course is concerned with the development of applications on Android platform. Android is used as a basis for the development of mobile applications. This course starts with the basic concepts of Java, history of android and architecture. It also covers the development of applications using widgets, events, networking. It provides ideas on sensors, their types and writing programs based on sensor classes for application development. They will design and develop Mobile applications with the use of J2ME, like SMS, MMS, Gaming, Multimedia, JavaFX & Android.

Course Objectives:

While studying this course student will be able to

1. Understand Android history and its fundamentals and know the building blocks of android
2. Get idea on the creation of android user interface and its testing mechanisms
3. Identify the usage of threads, broadcast receivers, intents, services and their working methodology
4. Know about the storage mechanism in android using SQLite and the usage of content providers
5. Recognize the usage of android widgets and sensors in android based applications

UNIT- I INTRODUCTION AND INSTALLATION OF ANDROID TOOLS

Installation and Use of Android Tools: Installing the Android SDK - Anatomy of an Android Project
Drawable Resources – XML Introduction - Creating user interface using XML – Overview of Android Building Blocks.

- a) Develop an android application to display a simple text in the emulator
- b) Develop an android application to display the internal keyboard in the emulator

UNIT- II USER INTERACTION

Input Components – Text View – Image View – List View and Alert Dialogues – Menus: Popup, Options and Context Menus – Screen Navigation through App Bar – RecyclerView – Material Design – Testing the User Interface

- a) Write an android program to display a message in the toast
- b) Write an android program to input a text through a text and the same must be displayed in the toast when a button is clicked on the screen
- c) Develop an application to perform 5 arithmetic operations: Addition, Subtraction, Multiplication, Division and Modulo operation with necessary user interface creation
- d) Develop an android application to process a student mark list by creating proper UI using the necessary controls

Dept. of Computer Science & Engineering (IoT)

UNIT-III THREADS, LOADERS AND ASYNCTASK LOADER, SERVICES

Threading in Android – AsyncTask – Loaders – AsyncTask Loader -Alarms and system services – Examples on alarms and services – Services: Services Life Cycle – Intent Service – Implementing Intent Service – Notifications.

- a) Write an android application to create a calculator
- b) Create an android UI that consists of Different Departments of a company namely Production, Finance, Marketing and HR. If the user clicks on any department it should show details of that department. Use indents.

UNIT IV: SAVING, RETRIEVING AND LOADING DATA:

Android File systems and Files, Databases on Android - SQLite - Status Contract Class, Update Refresh Service – Cursors – Backups - Content Providers: Overview – Role of Content Providers, Content Resolver.

- a) Design an android application to display a list of items on the android screen. If the user clicks any one of the list items a dialogue box should show that the user has clicked that particular item (Use array adapters)
- b) Develop an android application to show some categories such as education, entertainment, health, provisions etc., If the user clicks on any one of the items it should show the sub categories of the category and if is again clicked it should the details of those items. (Use indents and lists)
- c) i. Design an android application to create a service that shows the service is running in the background in the form of a toast

UNIT-V APPLICATIONS WIDGETS, INTERACTION AND SENSORS

App Widgets: Creation of Application Widgets - Interaction and Animation- Sensors: Sensor API in Android - Motion Sensor, Position Sensor, Sensor Values, Sensor Manager Class, Sensor Event class, Sensor Event Listener.

- a) Develop an android application to demonstrate the concept of Fragments in Android
- b) Develop an android application to demonstrate the database connectivity with the SQLite database to post and retrieve data through the User Interface (Example: Student mark list processing, Email Registration and Login, Products and sales)
- c) Demonstrate the usage of Sensors in android by developing proper application.

Course Outcomes:

Upon successful completion of this course, students can able to:

1. Work on android basic components and Install android
2. Create User Interfaces with various Layouts and views using android building blocks
3. Work with Broadcast Receivers and Services
4. Create Database in Android, Store and Retrieve data using SQLite and Content Providers
5. Develop widgets, Wall papers for an android application and write programs based on Sensors

Dept. of Computer Science & Engineering (IoT)

4. Android System Programming, Roger Ye, PACKT publishers,2017
5. Programming Android,ByZigurdMednieks,LairdDornin,G.BlakeMeike& Masumi Nakamura,O'Reilly,2011

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Skill Oriented Course – II

20ENG601 CORPORATE COMMUNICATION

L T P C
1 0 2 2

Pre-requisite: 20ENG201

Course Description:

English is practical and it is a must for any institution to provide students with opportunities to indulge in actively applying their language skills. Thus the Communication Skills Lab facilitates students with adequate opportunities to put their communication skills in use. It also accommodates peer learning by engaging students in various interactive sessions. This lab will be accompanied by a practical lab component.

Course Objectives:

This course enables the students to –

1. Focus on their interactive skills
2. Develop their communicative competency
3. Fortify their employability skills
4. Empower their confidence and overcome their shyness
5. Become effective in their overall performance in the industry

UNIT I LISTENING SKILLS 8 hours

Listening/watching interviews, conversations, documentaries, etc.; Listening to lectures, discussions from TV/Radio/Podcast.

UNIT II SPEAKING 10 hours

Articulation of sounds; Intonation.; Conversational skills (Formal and Informal); Group Discussion; Making effective Oral presentations: Role play.

UNIT III READING SKILLS 8 hours

Reading for main ideas; Applying background knowledge to predict content; Skimming; Scanning; Making inferences; Reading different genres of texts ranging from newspapers to creative writing; Reading Comprehension.

UNIT IV WRITING SKILLS 9 hours

Writing an introduction; Essay structure; Descriptive paragraphs; Writing a conclusion. Writing job applications and resume; Emails; Letters; Memorandum; Reports; Writing abstracts and summaries; Interpreting visual texts.

UNIT V INTERVIEW SKILLS

10 hours

Different types of interviews: Answering questions and offering information; Mock interviews; Body Language.

Course Outcomes:

At the end of the course, learners will be able to—

1. Read articles from magazines and newspapers
2. Participate effectively in informal conversations
3. Introduce themselves and their friends and express opinions in English
4. Comprehend conversations and short talks delivered in English
5. Write short essays of a general kind, draft Reports and personal letters and emails in English.

Text Books:

Skill Oriented Course – III

20CSO603 AI TOOLS, TECHNIQUES AND APPLICATIONS

L T P C

1 0 2 2

Pre-requisite

Course Description:

Performing data labeling, building custom models, object recognition, speech recognition, building chatbot, configuring neural network, building virtual assistant, and building convolutional neural network.

Course Objectives:

1. Perform data labelling
2. Develop custom models for object recognition
3. Build chatbot.
4. Configure neural network.
5. Smart Applications

List of Programs:

UNIT I: MACHINE LEARNING

6 Hours

Supervised Learning - Linear Regression, Logistic Regression, Unsupervised Learning – K-means clustering, Anomaly Detection.

- a) Implement simple linear regression to predict profits for a food truck based on the population of the city that the truck would be placed in.
- b) Build a classification model that estimates the probability of admission based on the exam scores using logistic regression.
- c) Implement the unsupervised learning algorithm using K-means clustering
- d) Implement an anomaly detection algorithm using a Gaussian model and apply it to detect failing servers on a network.

UNIT II: NLP AND BOT TECHNOLOGIES

6 Hours

Speech Recognition, Text-to-Speech, Chatbots: Chatbot definition, Build a Chatbot, How has chatbot transformed user experience, Designing elements, best practices for chatbot development, Virtual Assistants: What is a Virtual Assistant?

- a) Liv.ai - App for Speech recognition and Synthesis through APIs
- b) Building a Chatbot
- d) Build a virtual assistant

Dept. of Computer Science & Engineering (IoT)

UNIT III IMAGE PROCESSING & APPLICATIONS

6 Hours

Feature detection and matching, Segmentation, Object detection, Face recognition, Recognition Databases and test sets

- a) Perform Data Labelling for various images using object recognition

UNIT IV NEURAL NETWORKS

6 Hours

Neural Networks, Deep Learning, Different types of Deep Neural Networks - CNN, RNN.

- a) Implement un-regularized and regularized versions of the neural network cost function and compute gradients via the backpropagation algorithm.
- b) Build a Convolutional Neural Network for Cat vs Dog Image Classification

UNIT V SMART APPLICATIONS

6 Hours

Smart Agriculture, Smart Transportation & Autonomous Vehicles, Smart Homes, Smart cities

- a) Mini project on Smart Application

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand the basic concepts and applications of Artificial Intelligence.
2. Design Chatbots based on the user requirements
3. Identify the features of digital images for analysis.
4. Implement the deep learning techniques using software tools.
5. Develop smart applications for various domains

Text Book(s)

1. Tom Markiewicz & Josh Zheng, Getting started with Artificial Intelligence, Published by O'Reilly Media, 2017.
2. Programming collective Intelligence: Building Smart Web 2.0 Applications - Toby Segaran

Reference Books

1. Aurélien Géron, Hands on Machine Learning with Scikit-Learn and TensorFlow [Concepts, Tools, and Techniques to Build Intelligent Systems], Published by O'Reilly Media, 2017
2. Machine Learning with Python, Abhishek Vijayvargia, BPB publications

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Skill Oriented Course – IV

20CSO606 SOFTWARE ENGINEERING

L T P C
1 0 2 2

Pre-requisite NIL

Course Description:

This course will give an overview of UML and how to use their diagrams and views to support requirements, architectural diagram and systems design.

Course Objectives:

1. Understand the basic concepts of object-oriented techniques
2. Build the Model of the software system using UML diagrams
3. Elucidate design patterns as templates for good design
4. Learn the object-oriented methodology in software design
5. Explore testing techniques for object-oriented software.

UNIT- I BASIC OF OOAD

6 Hours

Basic concepts: objects, classes, abstract classes, data types, ADT, encapsulation and information hiding, inheritance, association, aggregation, composition, polymorphism, dynamic binding, object-oriented principles.

- a) Recognize basic issues of any problem and write problem statement.
- b) Identify class relations from problem statements.
- c) Construct basic principles of object-orientation.

UNIT- II MODELLING USING UML-I

6 Hours

UML Diagrams: Use case diagrams, class diagrams, various relationships among classes: generalization, association, aggregation, composition, inheritance, dependency etc., object diagram, UML 2 diagrams.

- a) Describe the basic syntax and semantics of UML.
- b) Develop modeling of the user's view using use case diagrams.

UNIT-III MODELLING USING UML- II

6 Hours

UML packages, activity diagram, state machine diagram, sequence diagram, communication diagram, interaction overview diagram, component diagram, deployment diagram.

- a) Design class diagram and Activity diagram
- b) Summarize behavioral modeling of any problem using sequence diagram collaboration diagram, and state chart diagram
- c) Summarize behavioral modeling of any problem using collaboration diagram, and state chart diagram

UNIT IV: DESIGNING USING UML

6 Hours

Overview of OOAD methodology, Use case model development, Domain modelling, Identification of entity objects, Brooch's object identification method, Interaction modelling, CRC cards, Applications of the analysis and design process, object-oriented design principles. OOD goodness criteria, CK Metrics, LK Metrics, MOOD Metrics, Code Refactoring.

- a) Interpret domain modeling.
- b) Develop sequence diagram for any given use case.
- c) Design class diagram for a given problem.

UNIT-V TESTING OBJECT ORIENTED SOFTWARE

6 Hours

Features in testing object-oriented software, Importance of grey-box testing of object-oriented software, Coverage analysis, State-based testing, Class testing, Fault-Based Testing, Scenario-Based Test Design, Integration Testing: Thread-based integration Strategies, Use-based integration Strategies, Cluster Testing, Validation Testing, System Testing, Testing tools.

- a) Design unit test cases for a project
- b) Design integration test cases for a project

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Analyze the problem from object oriented perspective.
2. Model complex systems using UML Diagrams.
3. Choose the suitable design patterns in software design.
4. Adapt Object-Oriented Design Principles.
5. Identify the challenges in testing object-oriented software.

Text Book(s)

1. Rajib Mall, "Fundamentals of Software Engineering", 5th Edition, PHI, 2018
2. Applying UML and patterns: An introduction to Object-Oriented Analysis and Design and Iterative Development by Craig Larman, Prentice Hall; 3rd Edition (October 30, 2004). ISBN-10: 0131489062

Reference Books

1. Rumbaugh and Blaha, Object-oriented Modeling and design with UML, Pearson, 2007
2. Bernd Bruegge and, Allen H. Dutoit, Object-Oriented Software Engineering Using UML, Patterns, and Java, Pearson, 2009

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Skill Oriented Course – V

20CSO607 BLOCKCHAIN ARCHITECTURE

L T P C
1 0 2 2

Pre-requisite : 20CSO114

Course Description:

A blockchain is a decentralized, distributed, and public digital ledger that is used to record transactions across many computers so that the record cannot be altered retroactively without the alteration of all subsequent blocks and the consensus of the network.

This course provides a broad overview of the essential concepts of blockchain technology and by initially exploring the Bitcoin protocol followed by the Ethereum protocol. It familiarizes with the functional/operational aspects of cryptocurrency eco-system.

Course Objectives:

This course enables students to

1. understand the importance of fundamentals of blockchain technology
2. acquire knowledge about cryptography and algorithms.
3. understand the knowledge in the concepts of bitcoin and consensus algorithms.
4. implement decentralized blockchain-based software Ethereum
5. examine the needed frameworks, standards, tools and libraries to build blockchains and related applications using Hyper ledger.

UNIT I INTRODUCTION TO BLOCKCHAIN

6 hours

Introduction to Blockchain Technology - The growth of blockchain technology - Distributed systems - The history of blockchain - Benefits and limitations of blockchain - Types of blockchain - Consensus - CAP theorem and blockchain - Decentralization using blockchain - Methods of decentralization - Routes to decentralization - Platforms for decentralization

1. Write a simple java program for the creation of blocks.
2. Create a simple blockchain using python.
3. Write a java program for implementing distributed systems.

UNIT II CRYPTOGRAPHY IN BLOCKCHAIN

6 hours

Cryptography in Blockchain: Introduction - Cryptographic primitives - Symmetric Cryptography - Data Encryption Standard (DES) - Advanced Encryption Standard - Asymmetric Cryptography - public and private keys - RSA - Secure Hash Algorithms.

1. Write a java program for the generation of public and private keys.
2. Write a java program for reading a content from the file and generate message digest.
3. Write a java program for implementing SHA
4. Write a java program for implementing DES
5. Write a java program for implementing RSA

UNIT III INTRODUCTION TO BITCON

6 hours

BitCoin - Introduction – Transactions - Structure - Transactions types – Blockchain - Wallets and its types - Bitcoin payments - Bitcoin improvement proposals (BIPs) - Bitcoin investment and buying and selling bitcoins - Bitcoin installation - Bitcoin limitations - Consensus Algorithms - Smart Contract - History of Smart Contract - Ricardian contracts

1. Write a simple java program for creating merkle root.
2. Write a simple java program for adding transactions to the blockchain.
3. Write a simple java program for implementing proof of work consensus algorithm

UNIT IV ETHEREUM

6 hours

Ethereum - The yellow paper - The Ethereum network - Ethereum block chain - Components of the Ethereum block chain - Accounts and its types - The Ethereum Virtual Machine - Blocks and blockchain - Mining - Wallets - Applications developed on Ethereum - Scalability and security issues - Blockchain usecases in Banking & Financial Service

1. Using solidity, create a smartcontract named MYCONTRACT and try to work with different types of variables.
2. Create a smartcontract called EXCEPTION that triggers three types of exception: require, assert and revert.
3. Create a smartcontract that deposits and withdraw money form the account.
4. Write a smart contract in solidity to print the array of integers and its length.
5. Write a smart contract that automates lottery system.

UNIT V HYPERLEDGER

6 hours

Hyperledger as a protocol - The reference architecture - Fabric - Hyperledger Fabric - Distributed Ledger - Sawtooth lake - Corda - Hyperledger projects.

1. Install Hyperledger Fabric and docker containers.
2. Create a chaincode for voting application
3. Create a chaincode for supply chain management system

Course Outcomes:

After completing this Unit, students will be able

1. To understand the fundamentals of blockchain technology.
2. To obtain knowledge on analysing various cryptographic algorithms.
3. To implement Bitcoin to develop solutions in the appropriate domains.
4. To device a decentralized blockchain-based software Ethereum
5. To apply Hyperledger Fabric to implement the Block chain Application.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Pre-requisite: 20CSO108

Course Description:

This course will provide you with technical hands-on knowledge of NoSQL databases and Database-as-a-Service (DaaS) offerings. Explore the origins of NoSQL databases and the characteristics that distinguish them from traditional relational database management systems. Understand the basic architecture and data models of a NoSQL database (key-value stores, document databases, column-family stores, graph databases) Discuss the criteria that decision makers should consider when choosing between relational and non-relational databases and techniques for selecting the NoSQL database that best addresses specific use cases.

Course Objectives:

1. To learn to implement and work with NoSQL databases
2. To understand the basic storage architecture of distributed file systems
3. To learn about the various tools available such as MongoDB, Cassandra.
4. To perform CRUD operations (create, read, update and delete) on data in NoSQL Environment
5. To develop Application with Graph Data model

UNIT I Introduction to NoSQL

6 hours

Overview and History of NoSQL Databases. Definition of the Four Types of NoSQL Database, The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, Impedance Mismatch. Application and Integration of Databases, Attack of the Clusters, The Emergence of NoSQL. Benefits of using NoSQL DB. Backend Management, Deployment, Front-End Development, Open Source, Drawbacks of Using NoSQL DB, NoSQL vs. SQL

1. Installation and setup of MongoDB client and server
2. Create a database and collection using MongoDB environment. For example a document collection meant for analysing Restaurant records can have fields like restaurant_id, restaurant_name, customer_name, locality, date, cuisine, grade, comments. etc.
Create database using INSERT, UPDATE, UPSERTS, DELETE and INDEX.
3. Practice writing simple MongoDB queries such as displaying all the records, display selected records with conditions

UNIT II NoSQL Development

6 hours

Schemaless Development, Data Models, Distribution Models, Consistency. Categories of NoSQL: Key-Value Stores, Wide-Column Family Stores, Document Databases, Graph Databases, Object-Oriented Databases, and Others, NoSQL Scalability, Searching.

- Wide-Column NoSQL Databases - NoSQL Databases: Cassandra, Bigtable, MapReduce, and Others.
4. Practice exercise on element, array based and evaluation query operators - \$exists, \$type, \$mod, \$regex
 5. Exercise on MongoDB shell commands and user management

Dept. of Computer Science & Engineering (IoT)

UNIT III An Open-Source NoSQL Database

6 hours

Various open source NoSQL Databases : MongoDB, CouchDB, Apache Casandra, Neo4J, Redis, Apache HBase, RavenDB – Pros and cons , Applications of open source databases.

Indexing and Ordering Data Sets : Essential Concepts Behind A Database Index, Indexing And Ordering In Mongoddb, Creating andUsing Indexes In Mongoddb, Indexing And Ordering In Couchdb, Indexing In Apache Cassandra.

6. Installation and configuration of Cassandra. Find out two use cases where Cassandra is preferred over MongoDB

7. Create database in Casandra using – Create, Alter and Drop. Add records using Inset, Update, Delete and Truncate.

8. Exercise based on Cassandra Query Language i.e. selecting records, select records with specific conditions

UNIT IV NoSQL Operations

6 hours

The set of essential operations – CRUD - Create, Read, Update and Delete operations in the context of a NoSQL database environment. Practical experience of CRUD operations for document databases using MongoDB. Queries using MongoDB

9. Experiment with MongoDB comparison and logical query operators - \$gt, \$gte, \$lt, \$lte, \$in, #nin, \$ne, \$and, \$or, \$not

UNIT V Data Modeling With Graph & Case Studies

6 hours

Building Graph Model, Edges, Nodes, Relationships, Example NoSQL Databases: Neo4J, InfoGrid.Graph NoSQL databases using Neo4, NoSQL database development tools and programming languages, Graph Databases, Graph Database Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases. Connected Data, Routing, Dispatch, and Location-Based Services, Recommendation Engines, When Not to Use. Case Study: Optimizing Transportation Routes

10. Mini-project

Course Outcomes:

Upon successful completion of the course, students will be able to

1. Understand various types of NoSQL Databases
2. Define, compare and use the different types of NoSQL Databases
3. Outline the application and Integration of NoSQL Databases.
4. Apply Nosql Development tools
5. Build graph model and performance tuning of Graph NoSQL databases

Text Book(s)

HONORS

Honors

20HDCSO101 GO PROGRAMMING

L T P C

3 0 0 3

Pre-requisite NIL

Course Description:

This course aims to introduce Go Programming Language. Go Programming Language has the features of procedural programming and parallel programming. This course will help the students to write programs using the GO language interfaces, concurrent routines and packages.

Course Objectives:

1. To understand the data types and constructs of GO Language.
2. To write GO Programs using basic programming constructs
3. To write GO programs using functions and arrays
4. To write GO programs using structures and interfaces
5. To write GO programs using concurrent routines
6. To do packaging and file handling in Go

UNIT I INTRODUCTION AND CONSTRUCTS

9 hours

Go Runtime and Compilations, Keywords and Identifiers, Constants and Variables, Operators and Expressions , Local Assignments, Booleans, Numerics, Characters, Pointers and Addresses, Strings, if-else and switch, for Statements, Counter-controlled Iterations, Condition-controlled Iterations, Range Loops, Using break and continue

UNIT II FUNCTIONS AND ARRAYS

9 hours

Parameters and Return Values, Call by Value and Reference, Named Return Variables, Blank Identifiers, Variable Argument Parameters, Using defer statements, Recursive Functions, Functions as Parameters, Closures

Array Literals, Multidimensional Arrays, Array Parameters, Slices and Slice Parameters, Multidimensional Slices, Reslicing, Maps and Map Parameters, Map Slices

UNIT III STRUCTURES AND INTERFACE

9 hours

Structures and Structure Parameters, Structure Tags and Fields, Embedded Structures Recursive Structures, Method Declarations, Functions vs. Methods, Pointer and Value Receivers, Method Values and Expressions, Interface Types and Values, Type Assertions and Type Switches, Method Sets with Interfaces, Embedded Interfaces, Empty Interfaces, Working with Interfaces

Dept. of Computer Science & Engineering (IoT)

UNIT IV CONURRENCY AND PARALLELISM

9 hours

Concurrency vs. Parallelism, Goroutine Functions and Lambdas, Wait Groups, Channels, Sending and Receiving, Unbuffered and Buffered Channels, Directional Channels, Multiplexing with select, Timers and Tickers

UNIT V

9 hours

Packages and Workspaces, Exporting Package Names, Import Paths and Named Imports, Package Initializations, Blank Imports, Unit Testing with Test Functions, Table Tests and Random Tests, Benchmarking

Files and Directories, Reading Directories , Reading Files, Writing Files, Copying Files, Error Strategies, Panic and Recover, Package Error Handling , Regular Expressions

Course Outcomes:

Upon successful completion of the course, students will be able to

1. apply basic programming constructs of GO Programs
2. apply functions and arrays of GO Programs
3. apply structures and interfaces using GO programs
4. demonstrate concurrent routines using GO programs
5. use packaging and file handling in Go

Text Book(s)

Dept. of Computer Science & Engineering (IoT)

Honors

20HDCSO102 ADVANCED INFORMATION SYSTEMS SECURITY

Course Prerequisite: NIL

L T P C
3 0 0 3

Course Description:

This course is designed to provide the foundation for understanding the key issues associated with protecting information assets, determining the levels of protection and response to security incidents, and designing a consistent, reasonable information security system with appropriate intrusion detection

Course Objectives:

1. Understand the concepts of information systems security as applied to an IT infrastructure.
2. Understand to describe how threats, and vulnerabilities impact an IT infrastructure.
3. Understand the role of access controls in implementing a security policy.
4. Understand the role of operations & administration in implementation of security policy.

UNIT I: INTRODUCTION, NEED FOR SECURITY

9 hours

Introduction to Information Security - The History of Information Security- Critical Characteristics of Information - NSTISSC Security Model - Components of an Information System - Securing Components - Balancing Information Security and Access - The Systems Development Life Cycle - The Security Systems Development Life Cycle. The Need for Security: Introduction - Business Needs First -Threats -Attacks.

UNIT II:RISK MANAGEMENT AND INFORMATION SECURITY

9 hours

Introduction - An Overview of Risk Management - Risk Identification -Risk Assessment - Risk Control Strategies - Selecting a Risk Control Strategy - Risk Management Discussion Points - Recommended Practices in Controlling Risk.

UNIT III: POLICIES, STANDARDS, PRACTICES AND BUSINESS CONTINUITY

9 hours

Introduction - Information Security Policy, Standards and Practices -The Information Security Blueprint: ISO 17799/BS 7799, ISO 27001and its controls, NIST Security Models, Design of Security Architecture - Security Education, Training and Awareness Program - Continuity Strategies.

UNIT IV: SECURITY TECHNOLOGY

9 hours

Introduction - Intrusion Detection and Prevention Systems: IDPS Terminology, Use of IDPS, Strengths and Limitations of IDPS - Honey Pots, Honey Nets, and Padded Cell Systems - Scanning and Analysis Tools, Access Control Devices.

Dept. of Computer Science & Engineering (IoT)

UNIT V: BIOMETRIC CONTROLS

9 hours

Biometrics - Nature of Biometrics Identification/Authentication Techniques - Biometric Techniques - Matching and Enrollment Process in Biometrics - Benefits Over Traditional Authentication Methods. Attacks on Wireless Networks: Other Security Risks in Wireless Networks, Management and Mitigations for Wireless Networks Attacks.

COURSE OUTCOMES

1. Identify and analyze the security threats and attacks and apply device suitable security policies and standards.
2. Assess the risks and apply suitable risk control strategies.
3. Employ appropriate intrusion detection and prevention systems to ensure information security.
4. Discuss various national and international laws of information security and its framework

TEXT BOOKS

1. Michael E Whitman and Herbert J Mattord, "Principles of Information Security", Course Technology, New Delhi, Fourth Edition, 2012 Reprint.
2. Nina Godbole, "Information Systems Security-Security Management, Metrics, Frameworks and Best Practices", Wiley India Pvt. Ltd., New Delhi, First Edition, 2009.(Biometric Controls, Security of Wireless Networks, Laws and Legal Framework)

3. Mark Merkow and Jim Breithaupt, " Information Security - Principles & Practices", Second Edition, Pearson Education, 2014.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Honors

20HDCSO103 DATA COMMUNICATION

L T P C

3 0 0 3

Pre-requisite NIL

Course Description:

To develop an understanding of the various aspects of data communications and computer networking systems. Topics include: data transmission, multiplexing, switching, error detection and few use cases.

Course Objectives:

1. To understand the fundamental concepts of encoding techniques
2. To familiarize with various multiplexing techniques
3. To understand the importance of error correcting codes in data transmission

UNIT I WAVEFORM ENCODING 9 hours

Introduction to Waveform Encoding- Pulse Code Modulation: Sampling, Quantization, Transmission, Reception, Error, SNR, Differential Pulse Code Modulation, Delta Modulation, Adaptive Delta Modulation, Sigma Delta Modulation, Linear Predictive Coder (LPC)

UNIT II ANALOG AND DIGITAL TRANSMISSION 9 hours

Physical Layer- Digital and Analog Signals, Periodic Analog Signals, Signal Transmission, Limitations of Data Rate, Digital Data Transmission, Performance Measures, Line Coding, Digital Modulation, Media and Digital Transmission System

UNIT III MULTIPLEXING 9 hours

Multiplexing- Multiplexing Techniques: FDM, TDM, STDM, Transmission Media: Classification and Selection of Media, Switching Networks: Packet, Circuit, Message, Telephone Networks: Packet and Circuit Switching in telephone networks

UNIT IV ERROR DETECTION AND CORRECTION 9 hours

Error Detection and Correction- Types of Errors, Two dimensional parity check, Detection verses correction, Block Coding, Linear Block Coding, Cyclic Codes, Checksum, Standardized Polynomial Code, Error Correction Methods, Forward Error Correction

UNIT V APPLICATIONS 9 hours

Case Study- Wireless Data Transfer, Remote Weather Monitoring System, Energy Management in Wireless System, Emission Monitoring System, Railway Information and Surveillance System, Central Distribution Hub

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

On completion of the course students will be able to

1. explain waveform encoding
2. describe the analog and digital transmission
3. discuss the multiplexing techniques
4. implement error correction and detection codes for correct transmission of data
5. apply data communication concepts in practical areas

Text Book(s)

2. Simon Haykin, Data Communications, 4th Edition, 2001, John Wiley & Sons

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Honors

20HDCSO104 MINING MASSIVE DATA SETS

L T P C

3 0 0 3

Pre-requisite 20CSE112

Course Description:

This course aims to provide comprehensive knowledge on developing and applying machine learning algorithms for massive datasets. The emphasis is on techniques that are efficient and scale well.

Course Objectives:

1. To appreciate the need of map reduce functions
2. To understand the methods used for finding similar items
3. To understand the mining techniques used in data streams
4. To extend the use of machine learning methods to massive data set
5. To use the deep learning methods

UNIT I MAP REDUCE 9 hours

Distributed File Systems, MapReduce, Algorithms Using MapReduce, Frequent Itemsets Mining - Handling Larger Datasets in Main Memory

UNIT II FINDING SIMILAR ITEMS 9 hours

Applications of Near-Neighbor Search, Shingling of Documents, Similarity-Preserving Summaries of Sets, Locality-Sensitive Hashing for Documents, Applications of Locality-Sensitive Hashing

UNIT III MINING DATA STREAMS 9 hours

The Stream Data Model, Sampling Data in a Stream, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments, Counting Ones in a Window, Decaying Windows

UNIT IV LARGE-SCALE MACHINE LEARNING 9 hours

The Machine-Learning Model, Perceptron, Parallel Implementation of Perceptrons, The Mechanics of an SVM, Parallel Implementation of SVM, The Framework for Nearest-Neighbor Calculations, Dealing with High-Dimensional Euclidean Data, Dealing with Non-Euclidean Distances, Using a Decision Tree, Parallel Design of Decision Trees

UNIT V NEURAL NETS AND DEEP LEARNING 9 hours

Introduction to Neural Nets, Dense Feedforward Networks - Activation Functions, Convolutional Neural Networks, Recurrent Neural Networks, Regularization

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon completion of the course the students will be able to

1. Describe the use of map reduce functions
2. Apply the methods used for finding similar items
3. Apply the mining techniques used in data streams
4. Explain how massive data set can be modeled using machine learning algorithms
5. Elaborate the working of deep learning methods

Text Book(s)

1. Jure Leskovec, Anand Rajaraman, Jeffrey Ullman, "Mining of Massive Datasets", Stanford Press, 2011.

Reference Books

1. Nick Pentreath, "Machine Learning with Spark", Packt Publishing
2. Ron Bekkerman, Mikhail Bilenko, John Langford "Scaling Up Machine Learning: Parallel and Distributed Approaches", Cambridge University Press, 2012.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Honors

20HDCSO105 GP - GPU COMPUTING

L T P C

3 0 0 3

Pre-requisite 20CSE103, 20CSE107

Course Description:

This course teaches the basics of parallel processing model, GPU programming using CUDA and applications of parallel processing.

Course Objectives:

1. To learn the architecture of GPU and basics of parallelism
2. To learn about the evolution of GPU computing
3. To learn GPU programming using CUDA
4. To study the methods of performance improvement in GPU

UNIT I INTRODUCTION

9 hours

Graphics Processing Units (GPU) as Parallel Computers - Architecture of a modern GPU - Why more speed or parallelism? - Parallel Programming Languages and Models - Overarching Goals - History of GPU computing - Evolution of Graphics Pipelines - GPU Computing.

UNIT II PARALLEL PROGRAMMING

9 hours

Goals of Parallel Programming - Problem Decomposition - Algorithm Selection - Computational Thinking - Introduction to OPENCL: Background - Data Parallelism Model - Device Architecture - Kernel Functions - Device Management & Kernel Launch.

UNIT III INTRODUCTION TO CUDA

9 hours

Data Parallelism - CUDA Program Structure - A Matrix - Matrix Multiplication Example - Device Memories and Data Transfer - Kernel Functions and Threading - Function declarations - Kernel launch - Predefined variables - Runtime API - CUDA Threads: CUDA Thread Organization - Using blockIdx and threadIdx - Synchronization and Transparent Scalability - Thread Assignment - Thread Scheduling and Latency Tolerance - CUDA Memories: Importance of Memory Access Efficiency - CUDA Device Memory Types - A Strategy for Reducing Global Memory Traffic - Memory as a Limiting Factor to Parallelism.

UNIT IV PERFORMANCE CONSIDERATIONS

9 hours

Thread execution - Global memory bandwidth - Dynamic partitioning of SM resources - Data prefetching - Instruction mix - Thread Granularity - Floating Point considerations: FP format -

Dept. of Computer Science & Engineering (IoT)

Representable numbers - Special bit patterns and precision - Arithmetic accuracy and rounding - Algorithm considerations - Debugging and Profiling: Debugging CUDA programs - Profiling CUDA programs - CUDA and MPI.

UNIT V CASE STUDIES

9 hours

Advanced MRI Reconstruction, Molecular Visualization and Analysis, Image Processing, Graph algorithms, Simulations, Deep Learning

Course Outcomes:

Upon completion of this course, the students will be able to:

1. Explain the basics of GPUs and GPU architecture
2. Discuss the parallel programming concepts and OpenCL
3. Write programs for GPUs using CUDA
4. Explain the methods for performance improvisation
5. Apply parallel applications targeting GPUs

Text Book(s)

1. David Kirk, Wen-mei Hwu, "Programming Massively Parallel Processors: A Hands-on Approach", Third Edition, Morgan Kaufmann, 2017.

2. David Kirk and Wen-mei Hwu, Programming Massively Parallel Processors: A Hands-On Approach, 2nd Edition, Publisher: Morgan Kaufman, 2012, ISBN: 9780124159921

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Honors

20HDCSO106 CLOUD DESIGN - PERFORMANCE, SCALABILITY AND SECURITY

L T P C

3 0 0 3

Pre-requisite None

Course Description:

Course Objectives:

1. To learn the basic elements of cloud computing system design.
2. To know the performance of cloud management.
3. To know the major cloud service providers and the web services offered by them.
4. To learn the common standards in cloud application development.
5. To compare the modern cloud security concepts as they are applied to cloud computing.

UNIT I INTRODUCTORY CONCEPTS AND OVERVIEW 9 hours

Cloud Design overview, private, public and hybrid cloud. Cloud types; IaaS, PaaS, SaaS. Benefits and challenges of cloud computing, public vs private clouds, role of virtualization in enabling the cloud; Business Agility: Benefits and challenges to Cloud architecture. Application availability, performance, security and disaster recovery; next generation Cloud Applications

UNIT II PERFORMANCE MANAGEMENT 9 hours

Management techniques, methodology and key performance metrics used to identifying CPU, memory, network, virtual machine and application performance bottlenecks in a virtualized environment. Configuration and change management goals and guidelines, tools and technologies in virtualized environments.

UNIT III MANAGEMENT OF CLOUD SERVICES 9 hours

Reliability, availability and security of services deployed from the cloud. Performance and scalability of services, tools and technologies used to manage cloud services deployment; Cloud Economics : Cloud Computing infrastructures available for implementing cloud based services. Economics of choosing a Cloud platform for an organization, based on application requirements, economic constraints and business needs (e.g Amazon, Microsoft and Google, Salesforce.com, Ubuntu and Redhat).

UNIT IV APPLICATION DEVELOPMENT 9 hours

Service creation environments to develop cloud based applications. Development environments for service development; Amazon, Azure, Google App. Technologies and the processes required when

Dept. of Computer Science & Engineering (IoT)

deploying web services; Deploying a web service from inside and outside a cloud architecture, advantages and disadvantages.

UNIT V SECURITY CONCEPTS

9 hours

Confidentiality, privacy, integrity, authentication, non-repudiation, availability, access control, defence in depth, least privilege, how these concepts apply in the cloud, what these concepts mean and their importance in PaaS, IaaS and SaaS. e.g. User authentication in the cloud; Cryptographic Systems- Symmetric cryptography, stream ciphers, block ciphers, modes of operation, public-key cryptography, hashing, digital signatures, public-key infrastructures, key management, X.509 certificates, OpenSSL.

Course Outcomes:

Upon completion of this course, the students will be able to:

1. Articulate the concepts, technologies and challenges of cloud computing designs.
2. Analyse the various cloud performance management delivered from the cloud.
3. Apply the cloud service features in cloud networks.
4. Design cloud services and applications.
5. Apply security features in cloud networks.

Text Book(s)

1. Cloud Computing implementation, management and security by John W. Rittinghouse, James F.Ransome, CRC Press, Taylor & Francis group, 2010.
2. Cloud Computing: A practical approach by Anthony T.velte, Toby J.velte Robert Elsenpeter, Tata Mc Graw Hill edition, 2010.

Reference Books

1. Cloud Application Architectures by George Reese, O'Reilly publishers.
2. Cloud Computing and SOA convergence in your enterprise, by David S. Linthicum, Addison-Wesley.
3. Gautam Shroff, "Enterprise Cloud Computing Technology Architecture Applications",

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Honors

20HDCSO107 NATURAL LANGUAGE PROCESSING

L	T	P	C
3	0	0	3

Pre-requisite Nil

Course Description:

Natural language processing (NLP) draws from many disciplines, including computer science and computational linguistics, in its pursuit to fill the gap between human communication and computer understanding. Students will learn how this system works and how can they utilize and what application can be build. After successful completion of this course, students will be familiar with NLP concepts.

Course Objectives:

This course enables students to

1. To understand the steps involved in Natural language processing
2. To learn about the lexical, syntactic and semantic analysis of natural language processing
3. To explore the various parsing techniques for natural languages
4. To understand the statistical models for Natural language processing
5. To learn about the various applications involved in Natural language processing

UNIT I LEXICAL ANALYSIS 9 hours

Lexical Analysis - Regular expression and Automata for string matching - Words and Word Forms - Morphology fundamentals - Morphological Diversity of Indian Languages - Morphology Paradigms - Finite State Machine / Transducers Based Morphology - Automatic Morphology Learning - Parts of Speech - N-gram Models - Hidden Markov Models.

UNIT II SPEECH PROCESSING 9 hours

Biology of Speech Processing - Place and Manner of Articulation - Word Boundary Detection - Argmax based computations - HMM and Speech Recognition - Text to Speech Synthesis - Rule based-Concatenative based approach

UNIT III PARSING 9 hours

Theories of Parsing - Parsing Algorithms - Earley Parser - CYK Parser - Probabilistic Parsing - CYK - Resolving attachment and structural ambiguity - Shallow Parsing - Dependency Parsing - Named Entity Recognition - Maximum Entropy Models - Conditional Random Fields.

UNIT IV LEXICAL KNOWLEDGE NETWORKS 9 hours

Meaning: Lexical Knowledge Networks - Wordnet Theory - Indian Language Wordnets and Multilingual Dictionaries - Semantic Roles - Word Sense Disambiguation - WSD and Multilinguality - Metaphors - Coreference and Anaphora Resolution.

UNIT V APPLICATIONS 9 hours

Applications: Sentiment Analysis - Text Entailment - Machine Translation - Question Answering System - Information Retrieval - Information Extraction - Cross Lingual Information Retrieval (CLIR).

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

Upon completion of the course, the students will be able to:

1. Justify the various steps necessary for processing natural language
2. Suggest appropriate lexical and parsing techniques for a given natural language
3. Apply appropriate statistical models for a given natural language application
4. Modify existing algorithms to suit any natural language for processing
5. Suggest appropriate pre-processing steps essential for the various applications involving natural language processing

Text Book(s)

1. Jurafsky Daniel, Martin James, "Speech and Language Processing", Second Edition, Tenth Impression, Pearson Education, 2018.

Reference Books

1. AllenJames, "NaturalLanguageUnderstanding", SecondEdition, BenjaminCumming, 1995.
2. CharniackEugene, "StatisticalLanguageLearning", MITPress, 1993.
3. Christopher Manning, Schutze Heinrich, "Foundations of Statistical Natural Language Processing", MIT Press, 1999.

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Honors

20HDCSO108 CRYPTO CURRENCIES

L T P C
3 0 0 3

Pre-requisite 20CSO109

Course Description:

Cryptocurrency is vastly discussed now days in all research domains to bring the decentralization. This course is to understand the concept of cryptocurrency. Students will learn how this system works and how can they utilize and what application can be build. After successful completion of this course, students will be familiar with cryptocurrency concepts. Also they can build their own application using the learned concepts.

Course Objectives:

This course enables students to

1. Understand the concept of public and private keys in cryptocurrency systems.
2. Explain the purpose and uses of digital signatures in cryptography.
3. Design and analyze consensus mechanisms using PoW, PoS, or PoB for specific use cases.
4. Describe the protocols used in Bitcoin, including the mining strategy and rewards.
- 5..Analyze the impact of cryptocurrency on the global economy and financial systems.

UNIT I FUNDAMENTALS OF CRYPTOCURRENCY

9 hours

Cryptocurrency Fundamentals: Public and Private Keys in Cryptocurrency Systems, The UTXO Model, Transactions, The Merkle Root, Signing and Validating Transactions, The Coinbase Transaction, Bitcoin Transaction Security, Hashes, Block Hashes, Wallet Types: Custodial Versus Noncustodial, Wallet Type Variations, Mining, Block Generation, Consensus, Proof-of-Work, Proof-of-Stake

UNIT II CRYPTOGRAPHY

9 hours

Cryptographic hash functions and digital signatures: Cryptographic hashes, Digital signatures, Private key Security ,Memory Hard Algorithm, Zero Knowledge Proof.

UNIT III DISTRIBUTED CONSENSUS

9 hours

Distributed Consensus: Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.

UNIT IV CRYPTOCURRENCY

9 hours

Cryptocurrency: History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Namecoin

UNIT V CRYPTOCURRENCY REGULATION

9 hours

Stakeholders, Roots of Bitcoin, Legal Aspects - Cryptocurrency Exchange, Black Market and Global Economy, Money laundering and terrorist financing, Tax evasion.

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Understand the concept of transactions in cryptocurrencies and the significance of the Merkle Root
2. Design and implement security measures to protect private keys in cryptographic systems.
3. Develop strategies to adjust the difficulty level in a blockchain network based on changing circumstances.
4. Apply knowledge of cryptocurrency history to analyze and assess the impact of historical events on the development of cryptocurrencies.
5. Understand the concepts and techniques used in money laundering, terrorist financing, and tax evasion in the context of cryptocurrency.

Text Book(s)

1. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, *Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction*, Princeton University Press (July 19, 2016).
2. Antonopoulos, *Mastering Bitcoin: Unlocking Digital Cryptocurrencies*

Reference Books

1. Kalle Rosenbaum, *Grokking Bitcoin*, MANNING Publication
2. Lorne Lantz & Daniel Cawrey, *Mastering Blockchain Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications*, O'REILLY Publications

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Dept. of Computer Science & Engineering (IoT)

Honors

20HDCSO109 DIGITAL FORENSICS

L T P C
3 0 0 3

Pre-requisite 20CSO109

Course Description:

With the rapid growth of internet users over the globe, the rate of cybercrime is also increasing. Nowadays, Internet applications become an essential part of every discipline with their variety of domain-specific applications. The basic objectives to offer this course as an open elective category to aware engineering graduates of every discipline to understand cybercrimes and their Operandi to analyze the attack.

Course Objectives:

This course enables students to

1. Provides an in-depth study of the rapidly changing and fascinating field of computer forensics
2. To learn about investigation, preventing and fighting computer crimes
3. To preserve the digital evidence in a secure manner from the social networks
4. To take out the operating system artifacts
5. To gain knowledge on Forensics tools

UNIT I DIGITAL FORENSICS SCIENCE 9 hours

Forensics science, computer forensics, and digital forensics. Computer Crime: Criminalistics as it relates to the investigative process, analysis of cyber criminalistics area, holistic approach to cyber-forensics.

UNIT II CYBER CRIME SCENE ANALYSIS 9 hours

Discuss the various court orders etc., methods to search and seizure electronic evidence, retrieved and un-retrieved communications, Discuss the importance of understanding what court documents would be required for a criminal investigation

UNIT III EVIDENCE MANAGEMENT & PRESENTATION 9 hours

Create and manage shared folders using operating system, importance of the forensic mindset, define the workload of law enforcement, Explain what the normal case would look like, Define who should be notified of a crime, parts of gathering evidence, define and apply probable cause.

UNIT IV COMPUTER FORENSICS 9 hours

Prepare a case, Begin an investigation, Understand computer forensics workstations and software, Conduct an investigation, Complete a case, Critique a case. Network Forensics: open-source security tools for network forensic analysis, requirements for preservation of network data

UNIT V FORENSICS TOOLS 9 hours

Current computer forensics tools- software, hardware tools, validating and testing forensic software, addressing data-hiding techniques, performing remote acquisitions, E-Mail investigations- investigating email crime and violations, understanding E-Mail servers, specialized E-Mail forensics tool

Dept. of Computer Science & Engineering (IoT)

Course Outcomes:

After completing this Unit, students will be able to

1. Describe Forensic science and Digital Forensic concepts
2. Determine various digital forensic Operandi and motive behind cyber attacks
3. Interpret the cyber pieces of evidence, Digital forensic process model and their legal perspective.
4. Discuss the tools used in forensics
5. Demonstrate various forensic tools to investigate the cybercrime and to identify the digital pieces of evidence

Mode of Evaluation: Assignments, Mid Term Tests, End Semester Examination.

Honors

20HDCSO601 ADVANCED MACHINE LEARNING

L	T	P	C
1	0	2	2

Pre-requisite 20CSE112

Course Description:

This course helps the students to understand and implement advanced Machine Learning (ML) algorithms such as Exploratory Data Analysis, Dimensionality Reduction techniques, cross-validation on a learning problem, Apriori algorithm, FP-Growth algorithm, K-means clustering, hierarchical clustering algorithms, DBSCAN clustering algorithm, density-based clustering, graph-based clustering, Web scraping.

Course Objectives:

1. To understand feature engineering techniques in machine learning
2. To learn simple regression algorithms
3. To apply comparative analysis among simple and advanced regression algorithms
4. To explore various types of clustering methods
5. To analyze feature extraction in NLP and object detection techniques using OpenCV

UNIT I: INTRODUCTION

9 Hours

Exploratory Data Analysis (EDA), Outliers, Dimensionality Reduction, Apriori Algorithm, FP-Growth Algorithm

- 1) Implement a program to perform Exploratory Data Analysis on real time datasets using the following approaches: a) Univariate Analysis b) Multivariate Analysis c) Visualization using correlation matrix
- 2) Implement a program to evaluate and compare learning curves of leave-one-out with two, three, five and ten-fold cross-validation on a learning problem using real time dataset
- 3) Implement a program to perform any of the following Dimensionality Reduction techniques on real time datasets. a) Principal Component Analysis b) Single value Decomposition c) Linear Discriminant Analysis d) Factor Analysis
- 4) Implement a program to generate Association Rules using the Apriori algorithm
- 5) Implement a program to generate Association Rules using the FP-Growth algorithm

UNIT II: SIMPLE REGRESSION

9 Hours

Simple Linear Regression, Multiple Linear Regression, One Hot Encoding, Polynomial Linear Regression

- 1) Implement a program to evaluate r^2 _score for finding the accuracy using simple linear regression
- 2) Implement a program to perform multiple linear regression model for predicting house prices
- 3) Implement a program to convert textual data into numeric data using one hot encoding
- 4) Implement polynomial regression for finding salary based on experience data

UNIT III: ADVANCED REGRESSION

9 Hours

Ridge Regression, Lasso Regression, Elastic net Regression, Logistic Regression: binary classification and multi-class classification

- 1) Implement a program using Ridge Regression to predict height depending on weight
- 2) Implement a program using Lasso regression on Boston house prices and select the best feature that mostly influences the price of the house
- 3) Develop a program to create Elastic Net model and find out which factor is most determining factor for diabetes in India.
- 4) Apply binary and multi-class classification techniques to develop a program using logistic regression

UNIT-IV: CLUSTERING

9 Hours

K-Means, Hierarchical, DBSCAN, density-based, graph-based clustering algorithms

- 1) Develop a program to implement K-means clustering algorithm
- 2) Develop a program to implement hierarchical clustering algorithm
- 3) Develop a program to implement the DBSCAN clustering algorithm
- 4) Implement a program for density-based clustering algorithm
- 5) Implement a program for graph-based clustering algorithm

UNIT-V: NLP AND COMPUTER VISION

9 Hours

Tokenization, Stemming, Lemmatization, Stop words, Parts of Speech (Pos), Count Vectorizer
Face Detection, Contours

- 1) Implement bag of words technique for converting text into vectors
- 2) Implement a program to extract SURF/SIFT feature using OpenCV on a sample image
- 3) Write a program to implement YOLO algorithm
- 4) Develop a program to eliminate multiple rectangular boxes

Course Outcomes:

After completing this course, the students should be able to

1. Understand various Feature Extracting, Feature Engineering techniques and Exploratory Data Analysis on real time datasets
2. Develop various simple regression techniques
3. Implement various advanced regression techniques
4. Develop clusters from real time data using various Clustering Algorithms
5. Implement bag of words and object detection techniques using NLP and computer vision
